Mr. BALLINGER makes a speech about not limiting private enterprise. If we pay any attention to what is really happening to power rights all over the United States, may we not omit anxiety about struggling private enterprise? Mr. BALLINGER declares at Seattle and Chicago that the Interior Department is not to be run by Mr. PINCHOT. We can well believe so much. Will the Secretary declare also that his department is not to be run by Senator HEYBURN? The alliance between BALLINGER and HEYBURN is an alliance for special interests, surely as the alliance between ROOSEVELT and PINCHOT and GARFIELD was an alliance for general interests. Not long ago a few constituents, giving no reason, asked HEYBURN to use his influence to have certain lands eliminated from a forest reserve in Idaho. HEYBURN hurried it to BALLINGER, with an urgent request for immediate action. About the same time HEYBURN received a very different petition from others of his constituents. These gentlemen asked for the *withdrawal* of lands, "because as home-makers we believe it necessary that this area be placed under national forest administration for the equitable distribution of grazing rights, protection of the timber and our watershed." What does HEYBURN now? This petition does *not* go to the department. The Senator replies: "I do not desire any more forest reserves in Idaho and shall not willingly consent to the creating of any more." He also says, "You could not live on it and it would be closed to settlement." Dear reader, if you will turn to your files of the Congressional Record for 1906, April, May, and June, you will observe Senator HEYBURN helping to pass the law which provides for settlement in forest reserves. Just what did he mean, therefore, by his threat to his constituents? A Senator and a Secretary of the Interior make a powerful working team. Officers of local land offices are appointed upon the nomination of Senators, so are Federal District-Attorneys. As a newer incident in this controversy, let us note that indications were to be seen in the recent extra session that Senator HEYBURN did not at all like the President's appointment of GEORGE W. WOODRUFF to a Federal Judgeship in Hawaii. It happens (perhaps it is a coincidence) that this WOODRUFF, once Assistant Attorney-General for the Interior Department under GARFIELD, rendered a legal decision which caused BALLINGER to resign from the land office, which he then decorated, but where, as far as the general public is concerned, he never, never would be missed. GARFIELD had been struggling to limit to reasonable proportions land and timber grabbing in the West. BALLINGER, soon after he became Commissioner of the general land office, executed radical changes among the special agents, sending men of experience and vigor to new and distant territories where they would be less destructive to private enterprise. ROOSEVELT came to the assistance of GARFIELD, directing the cooperation of the forest rangers with the officials of the land office. BALLINGER resigned and hied him away to Seattle, where the wood combine thriveth, and seems likely to thrive for a long time yet. One more remark about BALLINGER, showing him using the power of transfer in his present office, and we close. Just why did he recently send the man in charge of the land fraud investigations in Idaho to distant regions, replacing him with a mere youth, whose father is Federal office-holder and friend to BALLINGER? What does the Barber Lumber Company think of that? Why no tears?

Our appreciation of President TAFT reaches enthusiasm. His treatment of the Philippines, his administrative ability in Mr. ROOSEVELT'S Cabinet, his tact in foreign missions, some of his appointments, his endeavor to hold his party to its tariff pledges, his promise to help reform criminal procedure, his conspicuous honesty, all make us rank him high. The course against which he most needs to guard is pliant yielding to the soft conception of harmony; it is the acquisition of peace by wearily placating gray wolves; it is the policy of silencing their growls by throwing them an important office when they have been howling all the day and night.

Ready

AMONG THE LIVELY and important scrimmages of the autumn, one of the most significant promises to take place on our Western coast. FRANCIS J. HENEY is just now the object of a widespread newspaper attack. Its source is PATRICK CALHOUN'S literary bureau. An attempt is made to show something illegitimate in HENEY'S relations with the Federal Government. Should not CALHOUN avoid a comparison of past judicial records? The present campaign against HENEY is made, of course, for the purpose of distracting attention from CALHOUN and the question of his guilt or innocence. It is an old trick of defendants with means to create popular feeling. HENEY'S record is safe. Three years of bitter attack have failed to dislodge him from public confidence. He will probably be elected in the fall as District Attorney of San Francisco. On the result of his candidacy will to no small extent depend the level of esteem in which San Francisco will in the future be held by the country at large. Already CALHOUN'S prominent sympathizers are declaring in San Francisco that Eastern capitalists have announced they will avoid San Francisco so long as the prosecution of the "higher-ups" continues. Among all the silly arguments that a discredited cause puts forth, this is among the most familiar. If the various large cities of the country would look to the nomination and election of prosecuting attorneys of the uncompromising type of HENEY and LANGDON, we Americans should not be compelled to explain why municipal dishonesty has among us such an ascendancy as to require popular upheavals for its overthrow. HENEY has cleared the moral atmosphere of San Francisco. Before his advent petty corruption had so woven itself into the fabric of the body politic that it was scarcely possible to secure even a transcript of a public record without bribing an official. By the election of HENEY the Federal Government may be shown the way to better things. CHAMP CLARK recently denounced on the floor of the House of Representatives the appointment of incompetent district attorneys by the Government, necessitating in many cases the employment of special counsel. The minority leader said that if there had been a competent district attorney or two in the West there would not have been so much stealing of public lands.

A Problem for Britain

UNREST IN INDIA, such as threatens and disturbs the British, must, of course, always be a profoundly serious menace. None of the uneasiness which just now seems so widespread through Europe and Asia could have as immediate and far-reaching an effect as any real national movement in India. The rest of what England governs or controls either consists of essential and willing parts of the whole, like the colonies, or else is thoroughly in hand, like Egypt. Only one thing, however, has ever made it possible for a European nation to govern India, and that is the lack of unity in India herself. Should that heterogeneous collection of various races, languages, and religions, over a territory as large as Europe, ever experience a wave of feeling sufficient to make it a unit, the control of England could not last a week. She governs India by means of Indian troops and Indian money, and there is no other way in which she possibly could govern it. She obtained political possession, without design, because of her wars with France. She removed anarchy and the terrible rule of spoils. As HASTINGS fairly boasted, "the plowman is again in every quarter turning up a soil which had for many seasons never been stirred except by the hoofs of predatory cavalry." To what extent India could be conducted for the welfare of the millions, instead of for the spoils of the powerful, if British rule could

be shaken off, is a dark, unanswerable question. The loss to England would be almost entirely commercial, for, politically, that great and distant province weakens her. There are, of course, no signs of an immediately approaching unity of feeling that could result in shaking off the British rule, but there are signs that some such general spirit may be born sooner than thirty years ago seemed at all probable. Even now, there is plenty of nationality talk, but it is confined mostly to those who call themselves the "intellectuals," and it seeks and receives some foreign sympathy by assuming a similarity among the various populations living in what is called India, much closer than any which actually does exist. JOHN MORLEY, whom it is rather difficult to call Lord MORLEY, is an anti-imperialist of a species rapidly disappearing even among the Liberals. It is safe to say, therefore, that the selection of MORLEY for his present post is proof that England wishes to deal as liberally with India as the real facts about that region make reasonable and safe.

Facts

THE AMERICAN SMELTING AND REFINING COMPANY, controlled by the GUGGENHEIMS, is the Lead Trust. One hundred and fifty millions of dollars is expended annually by consumers in the purchase of this metal. The GUGGENHEIMS control fully ninety per cent of the American lead supply. They are the direct and, practically, the only beneficiaries of the tariff on lead. Purchasers of pig lead, for instance, are compelled to buy of the trust; there is no other source of adequate supply. Prices have been arbitrarily raised or lowered without regard to trade conditions. Whenever a decline in price has been contemplated, the trust, through its agents, has induced buyers to stock up at the prevailing price. When this was done, the decline was announced, and the buyers were compelled to bear the loss. When an advance in price has been contemplated, on the other hand, the deliveries of orders have been withheld until the advance has been made public, when orders have been rushed and the buyers forced to bear the difference in the cost price between the advance and the price prevailing when their orders were sent in. The complete control of the market has enabled the GUGGENHEIMS to carry out these profitable trade maneuvers. Their exactions have caused universal complaint. In 1896, before the Guggenheim trust was formed, the average price of pig lead in New York was $2.99 a hundred pounds. The annual consumption was 167,859 tons. Ten years later the average price of pig lead in New York was $5.78 a hundred pounds, and the consumption was 285,000 tons. The duty on lead has been deflected from the object it was intended to serve into the treasury of the American Smelting and Refining Company. Like Standard Oil, the Sugar, and other trusts, the American Smelting and Refining Company has its representatives in Congress. SIMON GUGGENHEIM, himself one of the profit-sharers of the Lead Trust, spent a large sum of money to secure a seat in the Senate from the State of Colorado. The GUGGENHEIMS are given neither to poor investments nor to wasteful expenditures.

Crete

WHAT HAS MADE TURKEY so positive in her attitude regarding Crete is exactly what caused the Young Turk movement. The Young Turks came into being primarily not because they were concerned about internal reforms. What disturbed them was the rapid dismemberment of the Ottoman Empire, and they became troubled over internal misgovernment mainly because it was what gave foreign powers the occasion to limit Turkey's outside rule. The situation in Crete will, presumably, for some time remain a delicate one, as the Powers prefer to dismember Turkey quietly, so far as they do it at all; and, as Crete certainly never will be satisfied until she is part of Greece, there must be some waiting before the equilibrium can be stable. When the time does come for Turkey to be further dismembered, the European Powers, free of the former Russian nightmare, will hardly exhibit another error similar to the Crimean War. That error grew out of ignorance of the facts. Had France and England at that time understood both Russia and Germany as well as they understand them now, they never would have taken up arms to support the Turk in Europe, whence, on every enlightened principle, he ought to have been driven long ago.

A Gathering of Interest

THE RÔLE PLAYED by trades unions in modern life has been of the first importance. Unionism has affected the condition of the laboring classes, not only directly, but also in an intricate manner, by altering, to a large extent, the whole public's point of view. It has been an extremely contributive element in modern thought. Women are now endeavoring to secure for themselves and their sisters the habit of similar organization. The National Women's Trade Union League will hold its second biennial convention at Chicago, beginning on the 27th of next month, with delegates from American points as far apart as Boston and San Francisco, and also from Germany and England. The women who attend the convention are compelled to lose a week's wages, but their enthusiasm for consultation and thought is such that they do not hesitate. The league pays the traveling expenses of those whose local unions are too impoverished by the recent panic to meet the cost. It is a new movement of much import, to which thought and sympathy will [illegible] out from every part of the country and from every class.

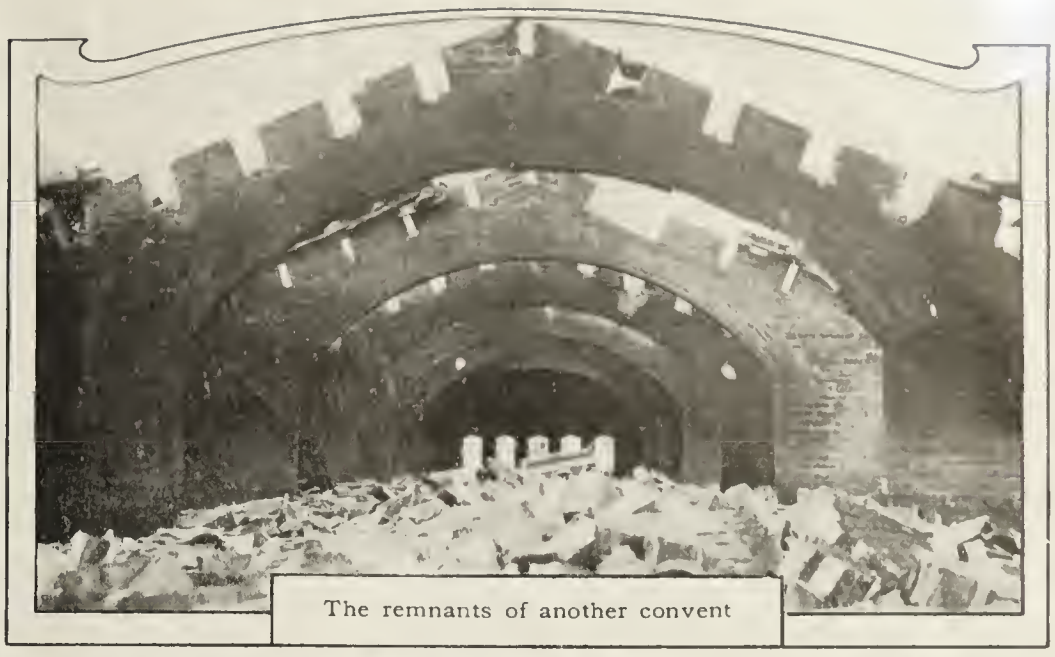
Remembrance

THE HABIT of having Old Home celebrations is increasing, and the habit is a good one. It lends permanency to feelings and ideals; it cultivates the imagination and the sentiments; it encourages an interest in the human realities of history. These celebrations differ in various places, but all live up to the name, and the differences are not in spirit. In every case the town is on its mettle to make its best appearance. In one small place, for instance, of a thousand souls, lying more than a dozen miles from a railroad, we notice among the events registered the reception of badges, sunrise salutes, band concerts, baseball games, automobile day, "hops," reunions, picnics, dramatic performances, gramophone entertainments, and as many items besides. Of course the son or daughter of the town who has come from afar to see "the old place" again can never see it entirely as it was. The garden has new-fangled leanings, the well-sweep has gone, the barn looks different, the clump of willows has grown. Much, however, comes back. Initials in the school-house desks may recreate the past. Near the school, also, is the little hollow where, one recess, you saw red, had your first fight, and gained a black eye. There is the old swimming hole, and, though the underbrush about has changed, the boys are going through the same motions on what looks like a smaller scale; and, likewise, the cave upon the hill, doubtless called the Devil's Den. An old flame is usually remembered. You go round to call upon her, you pat her four lusty youngsters upon the head, and tell the mother the while that she has discovered the fountain of eternal youth. Indeed, it might be pleasanter if there were not something "doing" every second. Games, concerts, speechifying one can find everywhere. The old home could be better seen with just a little more of naturalness and quiet.

Sarah

A GREAT-GRANDMOTHER—that is what Mme. BERNHARDT, with any luck, will be in a year or so; and yet who, following her career, has not felt her to be a better artist recently than she was at the height of the Sardou period, say fifteen years ago? SARAH BERNHARDT is a woman of talent, of intellect, of character, energy, and will: and such things count in preventing old age from being a time of lessened value. Now, as her granddaughter is about to marry, Mme. SARAH'S mind is as alert as it can ever have been, her interest as genuine, her strength not appreciably diminished. We can not all be Sarahs, but METCHNIKOFF would agree that the seeds of old age lie not only in the digestive apparatus; they lie partly in the nature of the mind, and the person whose interests are varied, strong, and constant is likely thereby to render life longer as well as more abundant. One way to increase the length of life is to increase its interest.

Dramatic Notes



MAETERLINCK is about to have produced in St. Petersburg and Paris a play called "Mary Magdalen." Among the distinguishing marks of the higher dramatists is the choice of topics which the world has already proved to be of interest and importance. They do not seek oddities, but rather handle material sifted by history and experience. There is some interest, by the way, in the production this month, by MAETERLINCK'S wife, for a single performance, of SHAKESPEARE'S "Macbeth," in a castle at St. Mandville. The French have a habit of acting SHAKESPEARE without such comprehension as is shown by the Germans, but "Macbeth," in its material and its construction, ought to be one of the plays which they can handle best. Mrs. GEORGETTE LEBLANC MAETERLINCK'S idea of giving the performance in various parts of the abbey has at least freshness: Duncan's arrival in the courtyard, with attendants all on horseback, seen from the castle windows; the feast in a twelfth-century banquet hall; a cloister gallery, the scene of the long line of spectral kings. Tickets at $40 each, for those who have cornered or inherited a large amount of this world's substance, ought to be worth the price.

Holmes

AN AMERICAN, distinguished in himself and in his type, takes his place on August 29 in the chain of centenary figures of this year. Far beneath POE as a world-figure, OLIVER WENDELL HOLMES is of greater interest, at least, to the dwellers about Massachusetts Bay. It might have been of himself that one of his characters remarked: "Boston State-house is the hub of the solar system. You couldn't pry that out of a Boston man if you had the tire of all creation straightened out for a crowbar." The Boston "type" has long served as a stock comic lay figure. Dr. HOLMES was no mere *littérateur*. The study and practise of medicine was his vocation; literature was an avocation; whatever the general rule, the result in his case was admirable extremely. He is almost the only American who has written spontaneous *vers de société*. In this he often touches the Calverley level. His "Breakfast Table" series comes as close to good talk set on paper as anything this country has produced. In himself he was known (and exhibited) as the best conversationalist Boston, in the height of her glory, could boast. For thirty-five years he taught as professor of anatomy and physiology. The secret of his stimulative power as an instructor lay in sympathy mingled with sense. As a writer those are his qualities, added to the greatest of them, which was wit.

A ruined convent guarded by the troops

The remnants of another convent

A thoroughfare after the artillery had shelled it

Soldiers resting in the streets

Children playing the game of revolution

THE campaign of King Alfonso, now being conducted to hold the Moorish city of Melilla, caused the important commercial metropolis of the Province of Catalonia to rise against the Spanish Government with an anti-war demonstration which began as a lawless riot on July 28, and developed into a formidable rebellion. Attacks were first made upon the tram-cars; they were derailed and burned. The telegraph wires were next pulled down and railway lines cut away sufficiently to stop all transportation. Streets were then torn up, and the paving-blocks were used as barricades behind which the insurrectionists took shelter, and from which they could not be dislodged until after several hours of vigorous shelling from the artillery. Twenty-three houses fortified by the revolutionists were destroyed. Their number amounted to 30,000, while it took 8,000 regulars, with the aid of their machine guns, to reduce them. The dead have been estimated to aggregate as many as 2,000, although this is not considered authentic. The final subjugation of the mob in the central plaza of the city practically put an end to the rebellious disturbances in Spain, although continued mutterings have required great vigilance on the part of the Government to suppress them. The other cities of the kingdom which fell in behind the lead of Barcelona in rioting against the policies of the present Ministry were effectually checked in their course by the severity of the lesson received by the latter.

One feature of the Barcelona rebellion which aroused the attention of the whole world was the attack made upon religious edifices, monasteries, and convents. The inmates were treated with great barbarity, and in some cases even nuns were stoned and killed. By August 2 thirty-eight churches had been consumed in flames—some of them fired by women and children. A plot was subsequently revealed which developed the fact that the uprising was caused by a group of Anarchists and extreme Socialists from all nations, including criminals, who were aiming for "Social Revolution."

The Shattered City of Barcelona

The Broken Wing

The Girl Whose Dull Career Is Vivified by an Adventure in the Sky

By FREDERICK PALMER

ILLUSTRATED BY ARTHUR LITLE

"IT'S a beautiful day," said Appleton—who always stated the obvious in a confidential way—after they were started for the station.

"Perceptibly so," Alice Adamson responded, absently.

She was convinced that if any one said again that it was a beautiful day she should scream. Of course it was. But June at its best in northern Indiana had no charm for one in her state of mind. She was praying for a downpour of pitchforks, an earthquake, anything which would mean missing the train; while vaguely through the whirl of her thoughts she heard him saying:

"We'll be away from New York just in time to escape the heat. Summer in Europe always, I should say, and fall and early winter on the Hudson, wouldn't you?"

It was talk quite characteristic of their world—a world gifted in the pleasant uses of wealth. Now, for reasons she could not explain to herself, she was rebelling against the diet of a lifetime. She wished that Mr. Edwin Shepperson Appleton—and she could think of him only by his full name that morning—had done something worth while. She wished, in her own words, that he were an italicized man, even at the expense of his delightfully languid manner.

His mother and her own father and mother had overplayed their parts in behalf of the future of an only son and an only daughter. Though she had known him for years, the effect of the last two weeks of constant association with him at the Adamson country place had had the result of a gradual awakening which had culminated in an inward tempest of rebellion. She saw herself enmeshed in a web which had been woven by her partial consent.

When the parental party went ahead in the tonneau and left the objects of their planning to follow in the runabout, this piece of characteristic strategy had revealed prophetically a line of torments yet to come. In prospect was a three months' tour, tied to a string of European hotels, under the chaperonage of three old conspirators. She was lost unless something happened to prevent their catching the Limited which connected with the steamer at New York. The flowing road seemed a ribbon of fate winding about her existence as a spool.

"Wouldn't you?" Appleton repeated his question.

She was about to make some irrelevant answer when the whir of a motor rising in cadence at double railroad speed attracted their attention. At the top of the hill which the runabout was ascending they recognized a sight not unfamiliar in the year 1912. An aeroplane, its great wings flashing a shadow over their faces, its propellers making a frothy swath of beaten light, swept by.

"I wish I were aboard!" Alice thought, wildly.

"Whew! Must be the *Bolt!*" said Appleton. "Going too fast to be any other."

The *Bolt* was Rodney Sharp's aeroplane; and she felt a peculiar interest in Rodney Sharp's career. It seemed to her that she knew him quite well. Looking over her shoulder, she saw the ship dipping as it approached Thomsonville. Then she was certain that it was the *Bolt*.

Often, she knew, in a New York-Chicago run Sharp made a detour over his home town. But he never stopped. His object seemed to be to satisfy an eagle's sentiment for soaring past the nest from which he had made his fledgling flights. It was twelve years now since they had met. From her carriage she had watched him, a youth of eighteen, take an ignominious tumble on the hillside back of the Methodist church to the gutfaws of the local population. She had spoken to him and he had smiled in answer to the little girl who was with her governess. The picture he made as, flushed and determined, he stood beside the wreck of his machine facing ridicule, had a romantic place in her memory. Soon afterward he had left Thomsonville. And now "that queer Sharp boy" had made the continents and the seas—for he was the first to cross the ocean—a moving picture under his feet.

From the *Bolt* she looked back at Appleton, who was about to take up the conversation where he had left it. It occurred to her that he was positively inane. Must she dine with him, walk with him, talk with him all her life? she asked herself. Good heavens! They might even live to celebrate a golden wedding!

The prospect of that golden wedding to her overwrought nerves played a controlling part in the events which followed. Ahead on the silent road a man on horseback was approaching. Evidently he was in a hurry and determined that the automobile should wait on him while he crossed the culvert over a small stream. As Appleton slowed down, Alice suddenly saw in the situation the means to miss the train: to a recess from his company which would give her time to consider her true feelings toward the man at her side. Her glimpse of aerial freedom had given her courage and imagination. Possibly, a little shaking might discover the latent [illegible] seemed lacking in Appleton's nature. With a quick movement, her hand slipped to the wheel, and under the spur of an opportunity so evident and appealing she gave it the turn that spelled the difference between security and catastrophe.

The road seemed to drop from under the car and the car from under her, while her first distinct impression was one of guilty fear. What if she were responsible for maiming, yes, even for killing, Appleton? The next that she knew she was on the grassy embankment facing the seat from which she had been precipitated. She looked for Appleton, who had gone in a different direction. He was rising from the water, dripping but uninjured. Assured of his safety, she pulled her skirt over her shoetops, made certain that she had not lost her hatpins, and viewed the situation blithely. Blinking and spluttering, her companion wiped his face with his handkerchief. People who were awakened out of a sound sleep by the San Francisco earthquake may understand his state of mind.

"How did it happen?" he gasped, as he glanced downward at his mud-drenched clothes

"How did it happen?" he gasped, as he glanced downward at his mud-drenched clothes.

If he did not know, it was far from any thought of hers to complicate matters by enlightening him.

"Extraordinary!" she murmured. "Wasn't it creditable of both of us not to scream?"

Edwin Shepperson Appleton was now sufficiently recovered to think of something besides himself.

"Look at the machine!" he exclaimed, with a grievous gesture toward the runabout, which lay on its side wedged into the bank. "How are we ever going to pull it out?"

But he had overlooked the farmhand, who had dismounted and was standing beside his horse, which was in its working harness. Appleton's face lighted at the offer of assistance, but a shadow crossed it after he had raised the crumpled hood and looked at the machinery, which was broken beyond immediate repair.

"It won't go!" he announced, blankly.

"Splendid!" exclaimed Alice, unconsciously giving voice to her feelings and further demoralizing Appleton.

He drew a long breath before he was able to utter a word.

"Splen—! Well, of all—it—it isn't a joke, Alice! Don't you see that if we miss the train we miss the steamer? And we've only fifteen minutes—and—"

He saw that he was wasting time. The shock had driven her silly, he concluded. Anyhow, he thought, this was better than if she had gone into hysterics; though the picture of her, serene, even gloating, as she surveyed her shoe-tips which she jiggled over the water, was exasperating.

"What are we to do?" he demanded, hopelessly, of the world in general.

"That is for you to say," she returned. Her glance swept past him to a speck in the sky seemingly growing larger. "Perhaps you might signal the aeroplane," she added.

"Signal an aeroplane!" exclaimed Appleton. He was fairly petulant. "Why will you talk nonsense, Alice?" Then he turned to the farmhand with something like a show of initiative for the first time. "Can't you, yes, can't you ride like—like mad"—this was exceptionally strong language for him—"to the next house and get a buggy?"

"The folks that live there ain't got but one buggy, an' they're in town with that," was the answer; 'an' you couldn't make it in less than half an hour, nohow, in a lumber wagon."

"Splen—!" began Alice, and hid her face in her hands for shame.

Appleton leaned against the machine in despair.

"Say," drawled the spectator, with a chuckle. He was surveying the situation through his eyebrows enjoyably, but at the same time he was sympathetic. "Say, why don't you both jump on the hoss an' when you get to Perkins's—that's the next house beyond—you can rush into his barn an' get another."

Alice forgot the aeroplane, now the size of an eagle and pointing directly for them, and gave the man a look that might well make an ogre pause.

"Never! Never! Two of us in that fashion? Never!" she said.

She was pained, not to say shocked; but less so than Appleton when he heard her answer. However, he tried to be diplomatic.

"Yes, do, Alice, do! It'll be a lark!" he pleaded. "Why, I thought you—you were just the girl to enjoy a little romance." For him the routine of the solar system was in danger.

"Never! Not that kind! I'll wait for you to bring a rig."

"But it makes such a mess all round! Can't you see that if we miss this steamer we may have to wait weeks—and it will be dreadfully hot in New York!"

She did not answer except to adjust her position and lean her head against the wall of the culvert. Apparently, all she needed was a novel to pass the rest of the day pleasantly. It was time for him to be firm, he thought; but firmness as exemplified by Edwin Shepperson was a most wavering exhibition.

"You must! You—I mean—" he stammered.

She wondered if he would pick her up and put her on the horse, willy-nilly. That would show he had some force of character. It would greatly improve, if not italicize, her opinion of him as a man. If they really had to go to Europe together she rather wished that he would. The best he could do, however, was to study his watch-face dismally. She looked back to the sky, and the swiftly increasing hum of a motor in their ears called the glance of the others after hers.

"By jing! It's that flyin' machine! She's a-comin' some! An', by jing!—yes, by jing! ef she ain't—a-goin' —to—stop!" exclaimed the farmhand, who was enjoying a most interesting forenoon.

The propeller was still. There was the dead silence of the countryside and of space as the *Bolt*, with the dipping swoop of a gull at sight of a piece of bread on the waters, hovered over them and lighted on the road a few yards away, with ease and precision. The driver, a supple, spare man, stepped from his seat to the ground. So familiar was the public with Rodney Sharp's face from the prints that he needed no introduction. His manner, as he lifted his cap, quite relieved any appearance of aerial patronage to the battered earthly cousin, with its radiator rammed into the earth. A faint tide of color rose in his cheeks at sight of Alice, and possibly also in hers. He had not seen her since, as a little girl, she had watched his first experiment. There was no other sign of recognition on the part of either as he asked, in the terms of the automobile fellowship of the road, if he could be of any assistance.

With an apology for interrupting Appleton's excited repetition of broken, hasty sentences about trains and steamers to Europe and ten minutes, he said, when he had grasped the situation:

"It's only three or four miles to the station, isn't it? That's easy in the time you have. In fact, I expect to be in New York at three this afternoon. But the *Bolt* is my racer, and while I can take one passenger easily, I can't quite manage two."

Appleton had never been in an aeroplane. He was a conservative, with a stage-coach preference for automobiles, who regarded Rodney Sharp as a gallery player. But he was ready to show that, in this terrible crisis, he was not afraid to do his duty.

"I'll go with him, Alice," he said, "and you can ride the horse, and I think I can hold the Limited for a few minutes. Anyway, your father can."

Here Alice missed her cue and probably forfeited all right to sympathy. What more could she ask than to be

left to herself to take her own time to catch the train? This new development had befogged the very object for which she had driven the runabout into the creek. The awkward country boy—the son of the village blacksmith in a community where she had known the isolation of the rich—was now a courteous man of the world, waiting with polite reserve on her wishes and piquing her curiosity as to how the transformation had been wrought. And she was going to fly, and in the *Bolt*, whose fame was linked with Sharp's. She signaled her decision to Appleton as she stepped past him.

"Alice! Consider the danger!" he protested.

"There is none for a flight like this," put in Sharp, politely but decidedly. He settled the matter masterfully for all by adding to Alice: "It's very simple, you see," illustrating, himself, the position she was to take, "if you just place yourself there—yes, just so, that's right—and keep quite still and take hold of that bar, so, and mind to keep your head behind the hood or it will be hard to get your breath in the rush of air."

His manner had the distinction of something better than positiveness. It radiated confidence. Quite as naturally as she would enter an automobile, Alice took her place. Sharp took his at the levers, while Appleton blinked over the discovery that he was not having his own way.

"No time to be lost! You had better mount your horse and start!" Alice called over her shoulder.

"Yes. We'll meet you at the station. Now, all ready!" said Sharp.

The churning whir of the cylinders drowned further remarks from Appleton. He stretched out his arms in appeal as fruitlessly as if he had tried to catch a wild bird sitting on a limb. With the quiver of a tuning-fork, the delicate frame of the *Bolt* settled into perfect rigidity as it rose.

"I was lead and now I am a feather!" Alice whispered, in delight.

At the end of the angle of ascent they were already over the first farmhouse. Fences, fields, and brooks flew by in a pattern, with the station rising, a red brick spot, out of the meadows.

"We made a spurt to get headway," said Sharp. "Now we'll soar in."

The sight of her father's automobile rounding the grass plat to the station door brought her back to a sense of the price she had paid for the wonder of two minutes' new and glorious experience. She was going to catch the train and the steamer, after all.

"You say you will be in New York this afternoon?" she asked.

"Easily and early. We have a favoring wind," Sharp answered, automatically, occupied with his levers.

He was a most matter-of-fact creature, this Rodney Sharp, she thought—a piece of machinery. There were a few seconds' silence, in which the *Bolt* flung a descending circle toward the tonneau, from which her father and mother and Mrs. Appleton were just alighting.

"Think of it! Think of it!" said Alice. "In New York this afternoon!"

"Yes," he returned, with a sidelong glance of inquiry. "It's not so dusty as the train ride, and"—he laughed softly, which made her think that he might have at least an aero-mechanical sense of humor—"I should be delighted to have you come along."

"It's very kind of you—and I don't like dust. I think I will."

"Shall I stop at the station? Do you wish to see anybody there?" he asked.

"No—oh, no, no!" she answered, most emphatically.

Fifty feet above the ground they swept over three uplifted faces, luminous with surprise, as they recognized the *Bolt's* passenger.

"I'll meet you at the Grand Central when your train comes in, mother!" she called. "I'm all right. I'm perfectly safe"—and the three faces were lost in the brick of the fading station.

Then, under her very chin, Alice saw Appleton hammering the flanks of his plodding horse with his boot-heels. She thought of him kindly, platonically, by his Christian name before he passed out of sight with the quickness of a marionette on a spinning wheel. But here a new question occurred to her, one whose immediate answer would spare her suspense. Her purpose was equally as well served by having Appleton miss the steamer as by missing it herself.

"Could you slow up?" she asked, abruptly. "I'd—I'd really like to see if Edwin caught the train." She hummed a bar of an air. "H-m-m, quite a lot depends on it."

"Why, certainly," Sharp answered.

They were far past the rider by this time, but the *Bolt*, retracing its course, soon brought him into view, and there was something sensibly mischievous in the way—a gull watching a snail—that the helmsman kept the shadow of the port planes, a pursuing specter, up and down hill and with the bends of the road, over that excited horseman who was in a race against time. Appleton won by a breath, leaping aboard the Pullman at the last second, to Alice's dismay. Everybody concerned would now catch the steamer; fate was only postponed. She had been a fool, she told herself, not to have refused Sharp's offer.

"You're quite sure you'll be in New York this afternoon?" she asked.

"Absolutely. Now for it!"

For a twinkling the *Bolt* hung over the sleepers like a ship's sails bent taut by a strong breeze over the hull, before it drew away from the Limited as rapidly as the Limited away from a buggy on the highway. It was a giant, supernatural plummet shot in undeviating flight, steady and firm, yet so light that Alice felt herself a loosed spirit, borne on by the will of another who had eliminated time and space from the universe.

She tried exposing her forehead to the rush of air. It cut her skin like alcohol from an atomizer on a raw surface. With her eyes behind the hood again and looking down, the *Bolt*, flying so softly and swiftly, seemed stationary and the landscape to march. They were watching the revolution of the earth with the eyes of the morning sun that brings the break of day to the world around. The shape of a celery dish, Lake Erie lay a welter of silver-bronze, now the bronze glowing deep, now the silver rising in shimmering swaths or quick, capricious beams.

"We might cross," said Sharp.

The soprano note of the propeller fell to a mezzo; he threw the rudder over, and out of the mist rose far shores, which the Bolt skirted with another turn.

"Howdy do, Canada, and good-by, Canada!" Alice called.

Niagara was the foamy tassel at the end of the river's silken string; while beyond, the cataracts made a writhing green and black and silver snake. Over Buffalo hung the misty exhalation of its activities; and the *Bolt* soaring in silence as they passed, the beating symphony of its traffic came to their ears. Then the cylinders began their knitting again, and Sharp set his course on a beeline across an aerial tableland for New York; and New York suddenly seemed very near. She no longer had any doubt that she would arrive in time.

Now, instead of the landscape, which made an ever-changing rug-maker's paradise to the eye, Alice studied the man and the machine which preoccupied him. His lean, clear-cut face, bronzed by the wind, had the rapturous intensity of a boy listening to a tale of adventure. She understood how to him taking a risk was only turning over a leaf to another chapter of happy experiment.

Did he remember what she had said after his tumble twelve years ago? Did he remember her at all? Hardly. He had dwelt in no human world, but one of risk and chance and endless battle with the laws of gravity. A twisted wrist, still supple in its leverage for the capable, long-fingered hand, was the mark of one of his many accidents. The principles of the theorists' essays he had seized as something to be incarnated in cloth, wood, and metal. He had lived on a pittance, building, remodeling, soaring, tumbling, until success had come. "The thing to do is to keep on trying to fly," she recalled as his maxim, which she had read somewhere. Undoubtedly he was a man unafraid; yes, an italicized *man*.

"By jing! It's that flyin' machine! She's a-comin' some!"

"What is our speed?" she asked, finally.

"About two hundred."

"Miles an hour?"

"Yes, it's a record—and only three years ago sixty was our best. We have mastered the currents, now, and we're being pushed by one in our favor."

By this time Alice was ready to believe in fairy tales; and had she felt any incredulity it would have passed with her awakening from the hypnotism of flight at the sight of the skyscrapers of Manhattan rising above the dark spot of Jersey City, steel-streaked with the switches of the railroad yards. She recognized at its slip the monster hull of the great liner which was to take her abroad, with the black, gaping mouths of its huge stacks. As the *Bolt* dipped and turned toward the Governor's Island landing-stage, the white stretch of the cabins and the domino spots of their ports blotted the rest of the city out of her mind.

"You'll be at your hotel by three," said Sharp, without looking up.

She was a passenger and this impersonal, concentrated human machine the conductor of the train—that was all. Yes, that was all of—everything. Nemesis had sent Rodney Sharp with the *Bolt* to make sure that she marry Edwin Shepperson Appleton, who now had his full name again. The mystery and joy of flight had awakened a strange, new, unsatisfied spirit. For another hour in the heavens before she returned to be a creature with leaden feet on the earth she would give a year of her life. She tossed a tentative, hinting question at Sharp.

"How high can you go?"

"It depends on conditions. Three or four miles," he answered, steadying the *Bolt* in the air current opposite her slip, where the figures of the attendants were seen running to their places.

"That must be glorious! Oh, I'd like that!"

"You would?" He looked around at her, smiling, while the *Bolt* was as still as if some Yogi had suspended it by an invisible wire.

He scanned the sky, now overspreading with fleecy clouds. His keen eye seemed to pierce their texture in a study of the atmospheric conditions beyond. She saw him shake his head and set the planes for descent, and then, impelled by an impulse as sudden as her own which had sent the runabout into the creek, he shot over the levers and the *Bolt* skimmed the top of Castle William.

"We'll try it," he said. "But we can't go up like an elevator. We have to climb a pyramidal, aerial staircase, as it were;" and already they were rising.

Broadway lay underneath their feet, a great gash in the masonry of the city from the Battery to the green plot of the park. . . . The top of the beehive was off; the workers could be seen at their tasks. A wedding was coming out of one church; a funeral procession out of another. A knot of which a blue speck was the center was explained by the arrival of a patrol-wagon; surface cars and elevated trains were the busy weavers of a web; a fire-engine was a drawn string of flashing brass and a stream of sparks, and its horses galloping mice. The moving pencil-points of the sidewalks in the busy streets were streams which became white-crested with the upturning of faces, as the people of a metropolis, one and all for the second forgetting their individual thoughts and activities, cried: "The *Bolt!*"

"It beats any relief maps on the schoolroom walls, doesn't it?" said Sharp. "Think of the day when we can take the kids out of the tenements for an aerial afternoon, really to see the town in which they live; see it plotted in its arteries of life like the veins of a frog's leg under a microscope!"

They passed over the Hudson, which was one side of a silver frame for the picture of Westchester's country estates, and in an ascending circle over the Jersey City ferry slips, with a near glimpse of the part in Miss Liberty's hair. Mr. Edwin Shepperson Appleton was in limbo. Alice was living for an hour, with no thought of her future.

"If I dropped it would be death, wouldn't it?" she whispered. "My reason tells me so, but not my feelings. It seems as if I could flutter down gently or soar to the top of the Custom House, as I chose. Do you ever feel that way?"

"Yes. That's the trick—confidence. A pitcher must never think he is not going to strike the batsman out; an aeroplanist must never think that he is going to fall. And if something breaks—that's the fight."

She thought of him as a D'Artagnan of the air. She wished that they might be in danger, so that she could watch him at war with the battalions of gravity.

"And the confidence that carried me through—" he turned to her with a smile that had the suggestion of the self-revelation which is the forerunner of inquiry—"yes, it came from what might seem a little thing." He paused, as if waiting for some word from her.

Afar out at sea was a liner coming and another going. Two others lay at Quarantine against the background of Wadsworth's gun positions revealed. Others at anchor, or waiting to be warped into their slips, were big seeds and the tugs little seeds on the water, gray-green under a cloud, into which melted the broadening swath of ferryboats. Brooklyn, caught to Manhattan by the ribbons of the bridges, was a plotted brown patch at the end of the long tongue of land, with the silver gray of the Sound cut by fretted shores on one side and on the other by the rising and falling white points of surf and by the lacework of the shallows of Jamaica Bay, which under a fleeting patch of sunlight were streams of molten lava invading the land.

"Wonderful!" Alice whispered.

Transcendent spirits of flight, they kept on, up and up and up, the mingled sounds of traffic growing dimmer and the map drawn together toward a central point, as if by the closing fingers of a giant hand.

"Wonderful!" she repeated; "very wonderful, and most wonderful of all is—" she was going to say "you," but she made it, "your mastery of the air."

This gave him courage to express his fast-developing idea. He was flushed, his eyes were beaming, as he turned to her now, seeking comprehension.

"No. If I am to be mentioned, it all goes back to—to Thomsonville. When I had spent my last cent on that poor, sorry experiment that cost me a year's labor and all the village was laughing, there was a girl in a carriage looking on with the rest. She said—but do you recall what she said?"

That was his test, justifying a new kind of flight by the pilot of the *Bolt*. If she did remember, he might have more to say. He still felt the diffidence, not to mention his pride, of the blacksmith's son toward the daughter of the rich man of the community.

"Yes," she answered. "I said: 'But you [illegible] little. You flew farther than you could jump [illegible]

than two big jumps'—yes, two big jumps, as a little girl would put it."

The words were as distinct in her mind as when she uttered them. They sounded the same to him, except that it was the voice of a woman who spoke them now. She was tingling all over in a way that would not let her raise her eyes. Suddenly a film blotted the city out of sight. They were alone in the heavens. The mist of the cloud grew denser.

"It was the only encouragement I had had," he proceeded. "It stopped the smarting of peeled shins and elbows and saved me from trying to thrash the village bully. That night I kept repeating 'two big jumps.' It really seemed a beginning, and I rose in the morning determined not to give up."

"Oh!" she whispered, with a suppression of breath; and all he could see of her bent head was the hair blown from under her hat and her ear and the curve of her cheek.

The mist which enveloped them grew luminous. They passed into a space of sunny ozone, the light of which was suddenly shut off by another rolling cloud into which they sped. This grew darker with their progress. The moist rush of its vapor on their cheeks ceasing, they entered another dark, open space and saw ahead a bank of dense, smoky purple, cut by sabre flashes, and heard the roar of thunder. Now Alice did look at Sharp's face. It was drawn taut as the cloth walls of the planes. The supreme thing for which she had wished had come. They were in danger.

"Through it! Through it—the quicker the better!" he assured her. "The harbor is on the other side."

A first few fugitive, big raindrops struck her face and then a gust of them, like the driven spray over a ship's bow. She was in the forge where the shafts that strike the earth come swift and glowing from the anvil. A cyclonic whirlwind racked the *Bolt*, playing with the ship of the air as a zephyr plays with a thistle-blow. It whistled blisteringly through the planes. Streaks of lightning ran along the frame and livid violet balls shot past. Alice saw Sharp, bent, intent, spectral, and cool, and she held fast and guessed the end as some inevitable decree of elemental chance with which a little human being might not quarrel.

Careening, the *Bolt* all but turned turtle as it emerged from the deluging drive of rain, the blackness and the flashes into the clear, sun-swept haven above the danger line, yet without regaining equilibrium. It rocked, plunged, trembled, and swayed, like a creature in its death throes.

Alice's blinded eyes accustoming themselves to the light, she saw what had happened. With his feet braced against the central structure, Sharp had made of his arm a rod to take the place of the shattered one that had held the guiding-planes in place.

But it was not this that turned his lips ashen. The ship had suffered a far more serious injury. The fraction of a second longer in the storm and there could have been no suspense before the end. One of the *Bolt's* great wings was broken. By a sliver, one of the two main rods of the port upper plane held the crumbling cloth from sinking altogether onto the lower plane. Every plunge threatened the other rod and broadened the split.

Now, indeed, was D'Artagnan against odds, with the gleam of steel reflected in his eyes. Steadying the *Bolt* with the throw of his body, Sharp was battling for life with a gymnast's skill on a teetering wire. Alice felt her uselessness, not daring to stir lest she should incline the wrong way.

Freeing his hand from the wheel for an instant, Sharp drew from the tool-box a spool of copper wire, and then looked past Alice to the break and unconsciously shook his head. She saw what was in his mind. To leave his position meant that the *Bolt* would capsize before he could reach the break. Their fighting hope hung on joining the split ends of the rod. Without immediate repair death was inevitable. A glance of understanding, without appeal or any outward show of emotion, passed between them. Then his lips moved in a smile—a wonderful smile, which was the inspiration of her idea.

"A woman may also have courage," she said.

Her tone, even and natural, surprised her own ears, and she was proud of this fact in his presence.

"Of course you have courage," he returned; "great courage. I know it."

"And I can wind wire," she added.

"Courage—and—" he paused—"and the thing which your encouragement taught me."

She could blush over this, there in the midst of danger.

"Confidence! Confidence!" she repeated, remembering the key to the mysteries. "Confidence!"

She exhibited it by disengaging one of her hands and taking the spool from him.

"Can you crawl out on to the lower plane and reach up to that rod?" he asked, in such a way that it seemed to her the worst coward could not have said no.

"Isn't that the only thing to do?" she asked.

"Yes, and you will do it. Remember—confidence!"

She made her first move away from the stability of her seat and from the proximity of his buoyant, pervasive personality and paused, trembling at the prospect.

"My weight—it will—it will break the balance," she said.

"No. I can throw mine against it. I can use the planes and the propeller to assist. Don't look down. You're only crawling along a pipe three feet above the ground!" He sent her another wonderful smile, which seemed to intoxicate her with strength.

Partly supporting herself on the rod and partly on the moist sheet, slippery and yielding, Alice crept out, inch by inch, pausing with each plunge of the planes and making another advance in a moment of steadiness, her hold on life the strength of her fingers' grip, till the first part was done. But the terrible part was to come. The break lay four feet over her head. How was she to support herself as she reached aloft?

For the first time she looked down. The dark cloud had emptied its cargo of water and despatched its lightnings. It was fleecy, gentle, welcoming. It called her with a fascination that relaxed her muscles and paralyzed her head and nerves.

"I can't! I can't!" she cried.

"Why, yes, you can!" said Sharp. "Of course you can!"

This woke her out of her spell. She looked up at the break determinedly, only to feel how futile was her mission. How could she ever draw the ends together? No man had strength enough for that.

"Now I am going to drive her hard at an angle which will straighten out the broken part by the force of flight," Sharp added. "Hold fast! It's all right!"

He was uncertain that he could do this, but it was the major operation which he had planned. He flung back the spark and opened the throttle wide. The *Bolt's* starboard planes rose suddenly, like the end of a teeter-board, and the port ones sank, while the rod to which she was clinging with a lurch took an abrupt incline. She was looking at the cloud once more, and it seemed as if she could never look away from it again.

"See! The parts are together! Quick, while they are!" Sharp called to her, and thought himself a brute for his command, a murderer for ever having brought her.

Alice answered mechanically, as if she were a puppet at the nerve-ends of his will. She threw herself across the space between the two planes to the broken rod and closed her eyes. But she opened them to find that she had bridged the gulf.

"Splendid! Splendid! Now, your arm around the inner section," he shouted, "just as if you were standing on a limb of a tree and steadying yourself by the one above while you picked a pear."

The cheeriness of his voice was a guide to make any path seem easy. Somewhere she had seen a workman on a girder of a high building doing the same thing, and it was surprisingly easy, she learned, if you did not look at the cloud or away from the break or think of the motion of the *Bolt* as it rocketed in a narrow circle. Every time around added one more strand to that copper bandage she was making. Fingers bleeding and aching, mechanically she kept on winding. When, with a master workman's pride, she had twisted the knot and let the empty spool fall, she realized that the *Bolt* was sailing steadily. The rod under her feet felt as solid as a steamer's deck; the cloud beneath was no more ominous than the turf under the legs of a lawn chair. But this was only a passing impression incidental to her great thought as she sank, relaxed, on to the lower plane. She cried aloud with the gratitude of one who has received a great gift, and in the light of her discovery she repeated:

"I did this! I—I did this! Yes, I could and I did! And"—this she added with a sudden, hysterical laugh, after a pause—"and Edwin must be about at Buffalo by this time."

She had found herself. She knew that she was not going to marry Appleton, though a parental convoy took her twice around the world in his company. Thus absorbed with the relation of her new self to the things of earth, she had not looked toward Sharp. Her last glimpse of him as she set out to mend the broken rod seemed to belong to another age. She was conscious of his nearness, even that his thoughts were of her; his confident calls above the surging of the air through the planes and the whir of the propeller were still eddying in her ears when he now spoke in a softer tone. She lifted her lashes and saw deep into his eyes and deep into the heart of the man—an italicized *man*.

"It was worth all the danger to have learned the greatness in you," he said, "and to have watched you. With each strand of the wire which you wound around the rod—ah, you must know what else you were winding!"

Having repaired the broken brace of the guiding plane, his hand was free to assist her back to her place. His grip was as strong as his will which he had projected into her being a few minutes before; but it was also velvet and warm with the flood of his feeling. There was no resisting his words or his smile or the desire for eternal fellowship with him in the skies as they swept downward through the mists, rosy with sprinkled sunlight, to the panorama of the city still glistening from the moisture of a summer shower.

"I can not believe that this morning was this morning or this afternoon is this afternoon," Alice said. "It seems as if I had lived a year."

"Then our courtship has been long enough to satisfy all conventions," Sharp returned.

The Tame Man of Borneo

Bill Simms' Sea-faring Circus Appears in Pastures New and Accidental

By FREDERICK UPHAM ADAMS

THE tramp steamer *Minerva*, black of hull and dirty of deck, was churning her way through the placid waters of Macassar Strait, in that delectable section of the globe which lies midway between Borneo and Celebes. She may have been ten miles south or as many north of the equator—it was so hot that her stolid German captain neither knew nor cared.

A speck on the southwestern horizon attracted the notice of the lookout. Captain Stein, aroused at his call, mopped his brow and gazed long through the glasses.

"I never saw anyt'in' like dot," he growled. "Head her over dot vay," he ordered the wheelman.

The distant speck took on definite shape as the steamer logged the few intervening miles. The jangling of a bell was followed by a cessation of the thrust of the screw, the *Minerva* described a quarter circle, slowed down, and swung idly in the lazy heave of the sea. This was what Captain Stein discovered:

Mounted on a roughly constructed raft was a bamboo frame, and spread across this frame was what remained of a twelve-sheet circus poster, depicting an enormous lion jumping from the back of a galloping horse through a flaming hoop. Above this specimen of the lithographer's art was lettering which read:

"THE GREATEST SHOW ON EARTH

"SIMMS' INTERNATIONAL CIRCUS AND MENAGERIE"

And tacked across the center of the poster there was a strip of cardboard on which was scrawled this inscription:

"Somewhere, August 16, 1908. I have been cast ashore on east coast of an island that looks to me like Borneo. Small river to north and big mountain to west. Am on wreck of the *Daisy D.* Please hunt me up.

(Signed) "WILLIAM SIMMS."

There was nothing on the raft to indicate that it had ever carried a human occupant.

"Dot vas written a month ago," mused Captain Stein, as he removed the inscription. "I remember dot *Daisy D.*, but who is dis Villum Simms?"

A few minutes later the *Minerva* continued her southwesterly course, leaving in her wake the tattered remnants of a gaudy poster which bobbed on the waves and proclaimed to the circling gulls that Simms' International Circus and Menagerie was the greatest show on earth. Two days later the steamer dropped anchor in Surabaya, and the Javanese harbor-master listened rather indifferently to the tale told by Captain Stein.

"You are the fourth to bring in that yarn," he said. "There must be a fleet of those circus posters drifting around Macassar Strait. Looks to me like a clever Yankee advertising scheme. This Simms circus was here about four months ago, but I've heard nothing about the wreck of the *Daisy D.*"

He heard all about it two days later. A steamer bound from Shanghai to Sydney made its regular stop at Surabaya, and one of its passengers was Jed Blout, owner and captain of the lost schooner *Daisy D.* He told this story:

"About six months ago I met this man Simms in Suva, Fiji. He owned a circus and menagerie, and was making a tour of the South Seas looking for excitement and adventures. He got the idea in his head that it would be a great stunt to charter the *Daisy D.* for his outfit, and I was fool enough to make a contract with him. We ran into typhoons, got mixed up with cannibals, and had a devil of a time generally, but the more trouble we had the more this crazy Simms was tickled.

"We were headed up Macassar Strait early last August when we struck that big blow. The *Daisy D.* was stripped of her masts and was in a sinking condition when we sighted the steamer *Sunda* bound north for Shanghai. She answered our distress signals and lowered boats to take us off. There were ten of us in the last boat, including Simms and myself. The old man hung back until the last minute. His circus stuff and animals were insured, but he hated to quit the beasts, especially a thumping big elephant he called 'John L.' He was a mighty intelligent beast, and had saved Simms' life, but there was no help for it—at least so I thought, and I owned the schooner.

"From the dressing-room rode King Swatasoki"

"The elephant and the rest of the animals were battened down in the second deck, and the broken masts and rigging were trailing over the starboard side. I never saw a more complete wreck afloat. Just as we were pushing away from the schooner that elephant, 'John L.,' let out a blast with his trunk that you could hear above the roar of the wind and waves. Old Bill Simms gave a groan, made a leap from the stern,

caught hold of a busted stay, and pulled himself aboard the deck of the schooner again.

"'I'm goin' tew let old 'John L.' out of that hole an' give him a chance fer his life!' he shouted. 'Wait fer me!'

"There was another squall coming and the officer yelled to Simms to get back into the boat. The old man refused, and asked them to come back after him. The officer shook his head.

"'Go ter hell, then!' shouted old Bill Simms. '"John L." allers stuck ter me, an' I'm blamed if I'm goin' ter leave him drown in this old hooker!'

"The squall struck us, the rain fell in sheets, and the wind was something awful. For ten minutes we had all we could do to keep afloat. The officer was only bluffing about leaving the old man on the deck of that sinking schooner, but darkness came on and we saw no more of the *Daisy D.* We finally got aboard the *Sunda*, and her captain lay to all night. The day broke clear with the gale over, but we saw no sign of the *Daisy D.* I took it for granted that she had sunk. We made no stops until we got to Shanghai. I rested up a bit and then came back here to see if there was any chance that either Bill Simms or the *Daisy D.* was saved."

Among the listeners to this tale was a prosperous-looking gentleman garbed in a handsome yaching suit. The harbor-master had bowed deferentially and addressed him as "Mr. Allison."

"Do you happen to know if this William Simms came from Salem, Massachusetts?" asked Mr. Allison.

"That's where he came from," promptly replied Captain Blout. "All of his insurance and other papers are made out to his wife, who lives there. I brought them off the schooner."

"Im here with my yacht, the *Iroquois*," said Mr. Allison. "Would you mind going aboard her, Captain Blout? I have something important to tell you."

An electric launch carried them swiftly to the magnificent private yacht, the cherished plaything of this multimillionaire who had the sense to retire at forty-five and enjoy the pleasures that the world offers to those who can command them.

"I lived in Salem when a youngster," began Mr. Allison, when they were seated in a corner of the superb cabin. "Our folks were very poor. My father worked in one of the mills, and married a girl who slaved in the same room with him. Children came fast, but I was the only boy. When I was about twelve years old the Simms Circus came to town. It was quite an event, since the Simms family lived in Salem and were neighbors of ours. I had never seen William Simms, but admired him because I had heard that he ran away from home when sixteen and joined the circus he then owned.

"At noon on the first day of the circus there came a sharp rap on the window. Mother opened the door, and there stood one of the handsomest men I ever saw. At first my mother didn't recognize him, then she blushed and exclaimed:

"'Well, if it isn't Billy Simms!'"

Mr. Allison smiled thoughtfully at this recollection, and filled Captain Blout's glass.

"Years afterward my mother told me that Billy Simms had been her boyish sweetheart," he continued. "He stayed to dinner, ate our poor fare, teased my mother, joked with my father, and left with us a big bunch of free tickets. He took a great fancy to me, let me ride on the elephant, and made me the happiest lad in Salem. Every time he returned he repeated this performance. He was my first ideal of a great man, and I have not outgrown it."

"He is a great man," solemnly agreed Captain Blout. "His sticking to 'John L.' proves it."

"We must rescue him, if alive," Mr. Allison said. "My yacht, my services, and my money are at your disposal, Captain Blout. We must search these coasts until we find him. When will you be ready to leave?"

"In an hour," instantly responded Captain Blout.

Late that afternoon the *Iroquois* glided swiftly out of Surabaya harbor, and ere dark her prow was cutting the Java Sea. Pilots more or less familiar with the coasts of Borneo were picked up in Banjarmassin, and the long quest began. Many times in the two weeks which followed it seemed that their search was hopeless. Islands, jutting capes, intricate sand-bars, deltas of rivers, winding bays, and other features of this uncharted and little-known coast made the task a difficult and dangerous one.

"The multitude of savage warriors fell on their respective faces"

Much of the exploration was made in the launch, the depth of water preventing the yacht from nearing the reef-protected beaches. They finally worked north until they came to a region where spurs of unnamed mountain ranges reach to the water's edge, ending in many places in high cliffs with the surf boiling at their feet. Early one morning, on the fiftieth day out of Benjarmassin, Captain Blout lowered his glasses and gave a deep roar of joy.

"Look! Look!" he shouted to Mr. Allison, gripping his arm and pointing ahead.

Less than a quarter of a mile to the north was a cliff, and on its crest was displayed a huge poster representing a many-colored hippopotamus with an agonized heathen about to be crushed in his wide-opened jaws. Above this work of art was the lettering:

"Wait for the Coming of

"Simms' International Circus and Menagerie

"The Greatest Show on Earth"

Never had Marshall Allison gazed on a painting which so thrilled him with rapture as did that riot of color depicting the mythical Simms hippopotamus.

For half a mile the launch ran at reduced speed, the occupants keeping a sharp lookout for any signs of the lost circus man. Then they entered the smooth waters of a sound formed by a ragged island which lay parallel to the shore. Mr. Allison was the one to discover the battered hull of the *Daisy D.*, lying at anchor in a perfectly sheltered cove protected from the sea by the island. They were almost upon the storm-beaten schooner before its outline was revealed beyond a jutting wall of rock.

Captain Blout lifted his voice in a shout which came back in crashing echoes. These had hardly died away when a tall figure appeared from back of the shattered cabin, and two minutes later the good captain scrambled to the deck of the *Daisy D.* and grasped the hands of Bill Simms.

"Glory be, Cap'a'n Blout!" the old man exclaimed. "I'm amazin' glad ter see ye. An' you too, stranger," helping Mr. Allison over the ship's side. "I don't know who ye air, but if ye don't look like little Marsh Allison from back in Salem, Massachusetts, I'm a coyote."

"You have called the turn, Mr. Simms," laughed the stalwart millionaire. "I'm proud and glad to be able to do this little in return for those circus tickets and those rides on the elephant in Salem."

"How is yer mother, Marsh?" eagerly asked the old man.

"In splendid health, and often speaks of you."

"Never was a finer woman than your mother," he declared, then turned to Captain Blout. "Cap'a'n, I began tew think you was never comin' after this here old hooker of a schooner. Dew I get anythin' fer salvage?" with a shrewd wink at Allison.

"Anything in reason," agreed Captain Blout.

"I won't charge ye a cent," grinned old Bill Simms. "I've had a million dollars' worth of fun aboard her since I saw ye last."

"Where's 'John L.'?" asked the captain, peering down the companionway.

"He's ashore," pointing to the west, "an' I must get a move on an' join him. I'll tell you what's happened on the way over. I'll hitch the dingey to that swell launch of yours, and we'll hit the beach in style."

During the three-mile run to their destination, old Bill Simms thus narrated a part of his strange adventures:

"As you will remember, Cap'a'n, a rippin' squall struck us a few seconds after I changed my mind an' clum erboard the *Daisy D.* I said a few hurried prayers an' erbout give it up. I also realized that it was all dummed nonsense tew try tew let 'John L.' up on deck. If I opened the hatch for'ard the first few waves would fill the schooner full of water, so I decided tew let bad enough alone. I tied myself to the stump of the mizzen-mast, thought over my past life, wondered what kind of an obituary I would get in the Salem papers, an' let it go at that.

"'Most every wave went plumb over her, but I reckon the trailin' wreckage sorter kept the *Daisy D.* from turnin' bottom up. The gale died down after a bit, it was darker than a mouse-hole in a vault, an' finally I fell asleep.

"When I woke up the sun was shinin' full in my face an' the sea wasn't bad at all. Thar I was all alone on the *Daisy D.*, an' some tickled tew be alive. I unlashed myself, found an ax an' busted a way intew the cabin. I got somethin' tew eat, then opened up the for'ard hatch an' greeted old 'John L.' The pleased twinkle in the eyes of that wonderful animal more'n paid me fer all my risk an' sufferin'. We was well loaded with grub fer man an' beast, an' I perked up a lot. I fed all the animals, lit my pipe, went on deck, an' let her drift.

"It breezed up some from the south durin' the day, an' long erbout noon I made out a range of mountains tew what I persume was the west. They was some nearer when the sun went down, an' we seemed tew be carried along by wind an' current. The next mornin' when I awoke we was driftin' along on water as smooth as a mill-pond, right in here between that high island an' the cove we're comin' tew. If there ever was a natural harbor this is it, so I let 'John L.' up on deck, an' he an' I dropped the anchor overboard. I don't reckon anybody else was ever saved from the sea in exactly that thar way; eh, Marsh Allison?

"The smell of the land kinder excited 'John L.,' so I sent him below fer fear he'd jump overboard an' desert me.

"I was cookin' breakfast an' wonderin' whar in thunder I was, when I heard the sound of paddles. I stuck my head up an' saw half a hundred canoes filled with the sorter people I uster admire in school geographies. I grabbed a gun an' beat it to 'John L.'s' apartments, turned him loose an' told him tew lie low an' await developments. I also let my toothless old lion outer his cage.

"Them savage heathen came over the sides of the *Daisy D.* like a pack er kids breakin' intew a baseball field when they have pried some boards loose. I reckon thar was five hundred of 'em, an' they was erbout as quiet as a wimmin's sewin' circle after the parson has eloped with the choir soprano. A bunch of 'em started down the companionway whar me an' 'John L.' was located. They was precipitate as a lot of German bowlers enterin' a rathskeller on a hot summer night.

"I didn't have tew tell that intelligent pachyderm his business or give him eny cue. He knew it. He squashed the front ones an' then started fer the deck, an' me after him. Some brave but foolish savage stuck a spear intew his flank, an' then old 'John L.' went intew action fer fair. He was mad clear through, an' the way he waded intew them benighted heathen was surely somethin' awful. That mangy old lion also came on deck, made a bluff of a roar, an' it went. The rest of 'em piled overboard an' beat it fer shore.

"I restrained 'John L.' from jumpin' in after 'em, then went below tew clean up. Thar I found a [illegible] who was very much alive, but plumb scared [illegible]. He had crawled under the tiger's cage an' [illegible] when he saw me. I'm some uster South Sea [illegible] ar

"Then followed a truly wonderful performance with 'John L.'"

[illegible] clap was one by his make-up. I dragged [illegible] stood him on his feet.

"*Rette mich!*" he finally gasped, throwing himself at my feet.

"Mebbe I wasn't some surprised. In purty good German he said: 'Save me!' I have tew know more er less of all lingoes in my business, so I assured this king that I would spare him fer a while, an' think it over afterward. It seems that his name was King Swatasoki, and that he was the ruler of this part of the earth. An' that reminds me, Cap'a'n Blout—is this here country Borneo, or what in thunder is it?"

"This is a part of the northeast coast of Borneo, Mr. Simms," volunteered Mr. Allison.

"I'm glad tew know that," declared the old man with much satisfaction. "I made up my mind that it was Borneo, an' so printed on them circus posters I later set adrift, but this here King Swatasoki said he was ruler of 'Branderhilo,' or some other sich outlandish name, an' said he had never heard of Borneo. However," mused the old circus man, "when you stop tew think that half of the inhabitants of New York City—so I reckon—don't know whether Omaha is a town, a lake, er the name of a brand of whisky, I take it there's nothin' strange that this King Swatasoki hadn't heard of Borneo. Just because we call it by that name means nothin' tew him. I don't reckon the folks on Mars calls it that, but, of course, I may be wrong.

"It seems that this savage king had slipped past 'John L.' in the first rush, an' then stayed whar he was rather then face the music on deck. I locked the tyrant up in a vacant cage an' then went on deck tew think it over. Later I had a long an' difficult talk with him. He explained that he had picked up a lot of German from a sailor who had been cast ashore. The king said this chap had finally sailed away in a boat he had built, but I kinder suspect somethin' else happened tew the poor Dutchman.

"I explained tew King Swatasoki that I was the ruler over man an' beasts, an' told him that I would spare him if he'd abdicate in my favor while I remained here. He jumped at the chance. He had gold ornaments all over him, an' a chunk of that desirable yellow stuff in a war-club that must er weighed ten pounds. He said his people had tons of it. That give me another idea.

"His subjects hung erbout the schooner day an' nights in canoes, but I wasn't afraid of their makin' an attack so long as old 'John L.' was on the job. On the third day I let King Swatasoki out of his cage an' brought him on deck. I also introduced him properly to 'John L.,' an' patched up a truce between him an' that big bundle of leather. Swatasoki signaled tew some of his chiefs an' they cautiously neared the schooner. I let ten of 'em on board after they had left their weapons behind. We had a big pow-wow, which the king translated the best he could. They agreed that for the ransom of Swatasoki I should have as much gold as I could lift from the ground."

Old Bill Simms rubbed his back tenderly.

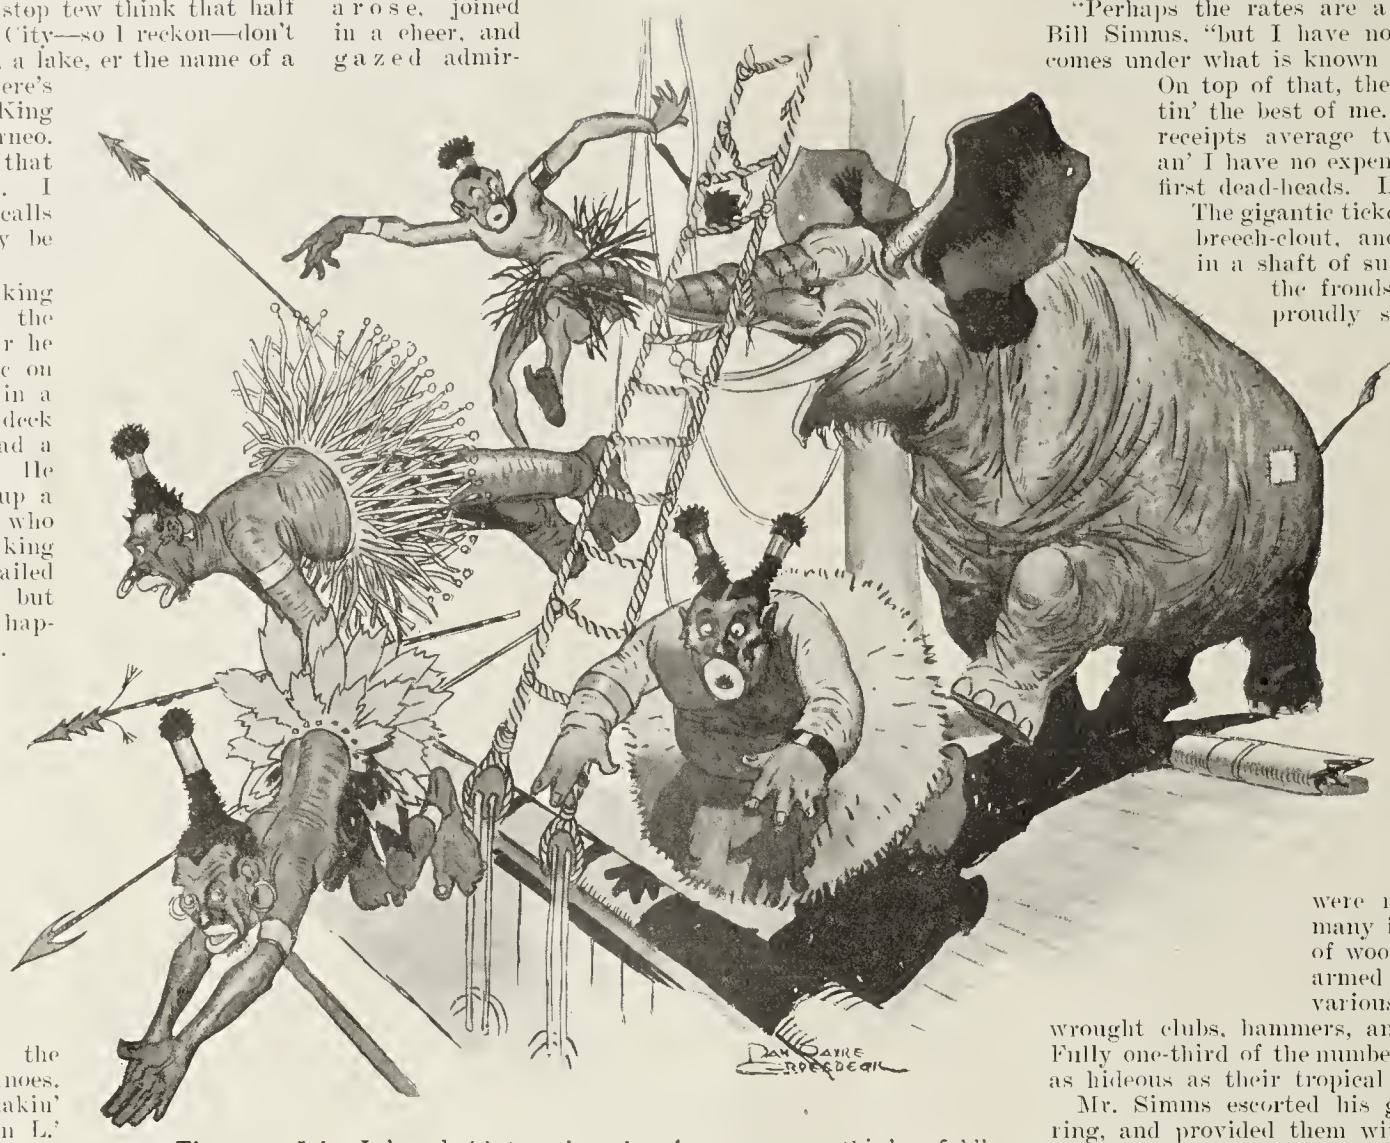
"I reckon I strained myself a bit," he said, with a wry smile, "but I'll bet I hoisted five hundred pounds er more, an' that's not bad fer a man of my age; eh, Cap'a'n Blout?"

The attention of that gentleman was riveted by a sight so startling that he hardly heard this question. The launch had shot past a towering ledge of rock which stood guard at the southeast entrance to a cove, and the view of the distant shore unrolled like a panorama. Beyond the gleaming white of the beach, with a background of tropical green, there suddenly showed the gray of a huge circus tent, its ridges gay with fluttering flags, and above them all the stars and bars of the banner of the United States.

Across the mirror of the intervening waters lay the purple shadows of beetling crags. The tent stood on a small plateau, level as a billiard table. Back of it were ledges of rock festooned with vines. In the far distance reared the dome of a mountain, its slopes a mass of color in which the bronze-green of royal palms predominated.

"Did ye ever see a finer place fer a circus tent?" asked old Bill Simms, with proper professional pride.

"Do you mean to tell us that you are giving circus performances here?" gasped Mr. Allison. "How do you—?"



"I should say I was givin' performances here," replied the old man. "That is one of my perquisites as deputy king of this section of Borneo. Wait until you see. Thar's some of my subjects," pointing to the beach. "They seem tew be excited over somethin'. Slow up thar, Marsh Allison! Don't go in any nearer; I've just thought of somethin'. Shut her off, man; shut her off!"

The small throng of natives on the beach had speedily been augmented by hundreds. Allison dropped an anchor and brought the launch to a stop a few hundred yards from shore, then turned and surveyed a scene calculated to make a timid man nervous. A mob of hideous [illegible] savages were making a demonstration which savored little of welcome. All were armed with spears and other weapons which they brandished defiantly as they waded into the water or piled into canoes.

"It looks to me as if your subjects have revolted," said Captain Blout, reaching for a repeating rifle and inspecting it carefully. "I think we'd better keep out of their reach."

"Revolted nothing!" exclaimed old Bill Simms. "Stay right here; I'll fix 'em," and before Mr. Allison could interfere the old man leaped into his dingey and pulled stoutly for shore.

He rowed directly into the oncoming fleet of war canoes, stood erect as he neared them, and uttered words which had a magical effect. Spears were lowered, the yells of rage died away, old Bill Simms jammed the bow of his boat against the beach, sprang ashore with one of the oars in his hand, waved it over his head and shouted a few words, whereupon the multitude of savage warriors fell on their respective faces and humbled themselves before this strange old man. Again he spoke to them; they arose, joined in a cheer, and gazed admiringly at Simms, who patted a gigantic savage on the back, sprang into his dingey, and rowed back to the launch.

"The way 'John L.' waded intew them heathen was somethin' awful"

"They thought you had captured me," he exclaimed, "an' had arranged tew rescue me from yer clutches. I explained tew them that they was bettin' on the wrong hoss. Head in fer shore, Marsh; it's nearly time fer the regular mornin' performance."

The natives stood well back from the beach as the three white men landed from the launch. Simms motioned to a splendidly proportioned savage, who stepped forward and bent his knee to his conqueror.

"This is King Swatasoki," the circus man said, taking the hand of that deposed ruler and presenting him to Captain Blout and Marshall Allison. "He wishes me to say that his men are very sorry for raisin' sich a rumpus, an' that he'll give a banquet this evenin' tew square things. We'll see you later, Swat," dismissing the King with a wave of his hand. "Before the show starts I want tew give you a look at my new menagerie."

"Your new menagerie?" repeated the astounded captain.

"That's what I said," grinned old Bill Simms. "This part of Borneo was created fer a man in my business. When I showed King Swatasoki that poster of a hippopotamus he seemed much interested, an' wanted tew see the original. Of course, I never owned one of 'em beasts, but I told him I had, an' that I had killed the monster in a moment of rage. He asked me if I would like another, an' I told him yes.

"'What color?' asked this accommodatin' monarch.

"I was some surprised, but never batted an eye. I told the king I was sorter partial tew white hippos, but that I was not averse tew a collection includin' red, blue, an' other shades that would harmonize with my wagons. Inside of a month that grateful tyrant got so busy with his subjects that they turned over tew me six of the biggest hippos I ever heard on, includin' a pair of white ones that sweats pink blood. Here they are," pointing to a huge enclosure within which were two enormous beasts with hides of light gray.

In adjoining pens were four of the more common types, but all of great size.

"As further tokens of his affection tew me," continued old Bill Simms, "an' in appreciation of my efforts tew civilize an' uplift this benighted section of Borneo, King Swatasoki has also contributed these five massive but untamed elephants. In another corral, which I'll show ye later, I have four types of the Borneo tapir, or rhinoceros, half a hundred monkeys an' orang-outangs—some of 'em bigger an' stronger than Jim Jeffries—tew say nothin' of bears, strange kinds of big cats, wild pigs, deer, flyin' lemurs, snakes forty feet long, a bunch of whoppin' big crock-diles, an' a collection of birds that are beauts. I don't reckon, Marsh, that enybody since old Noah ever got so many kinds of livin' critters together, an' one of the first things you'll have tew do, Cap'a'n Blout, will be tew hike back tew civilization an' charter a ship twice as big as the *Daisy D.* tew carry the new Simms menagerie away from here."

"I wish I had your luck," growled Captain Blout.

"Without throwin' eny boquets at myself," grinned old Bill Simms, "I sets it down as a reasonable proposition that a man should show some sagacity in pickin' out a place tew be wrecked. Now we'll go an' see my reorganized Borneo circus."

In front of the main tent was a roughly constructed table, and back of it were three natives who presided over weighing scales adjusted for one ounce. Eager savages proffered gold dust and small nuggets of that metal, receiving in exchange for about twenty dollars' worth of it a pasteboard ticket granting admission to the tent.

"Perhaps the rates are a trifle high," admitted old Bill Simms, "but I have no competition; besides, this comes under what is known as a 'hazardous enterprise.' On top of that, these people think they're gettin' the best of me. Perhaps they are, but my receipts average twenty-five thousand a day, an' I have no expenses, an' you two will be the first dead-heads. Let's go in."

The gigantic ticket taker was naked, save for a breech-clout, and his bronze skin gleamed in a shaft of sunlight which sifted through the fronds of an adjacent palm. He proudly stood guard over a slotted box, but bowed low when old Bill Simms and his companions approached.

The amphitheater was already well filled with the strangest audience that ever witnessed a circus performance. They were members of a tribe of "head-hunters" of unknown ethnographical origin. Unlike most of the branches of this famous type of Malayan savage, these natives were large and well formed, but with cruel and repulsive features. Their enormous heads were crowned with bushy stacks of knotted hair; beneath wicked eyes were nostrils and lips pierced in many instances with barbed pieces of wood, ivory, or bone; they were armed with spears and shields of various designs, also with curiously wrought clubs, hammers, and other primitive weapons. Fully one-third of the number were females, and they were as hideous as their tropical environment was beautiful.

Mr. Simms escorted his guests to the center of the ring, and provided them with seats. He looked at his watch, then took a whistle from his pocket and sounded a peculiar succession of notes. At this signal an enormous elephant brushed through a canvas wall and lumberingly approached his master. Old Bill Simms grasped an American flag, spoke a word to the huge beast, who reached forward with his trunk and lifted his owner high in air. Simms glared at the assembled natives and waved the flag in a sweeping gesture.

"Up, ye consarned cannibals!" he shouted. "Up on yer feet an' give three cheers fer the United States an' the American flag!"

The seven hundred natives sprang to their feet and yelled with a vigor which was startling, nor did they quit until Simms ceased waving the flag and was lowered by "John L." to the ground.

"I'm trainin' 'em in patriotism," he explained to Mr. Allison and Captain Blout. "Most of 'em have been tew the show twenty er more times before, an' they know what tew dew when I flutters the grand old flag. I could vote 'em solid fer the Republican ticket if I had 'em back in Salem. Excuse me, gents, while I puts on my show clothes an' starts the real performance."

Simms disappeared through the canvas. A few minutes later the sound of the whistle was again heard, the jabbering audience stared at the canvas flap, and leaned forward with craned necks—then Mr. William Simms made his formal entrée.

He was clad in the conventional costume familiar to all who have studied the cartoons of "Uncle Sam." On his head was the white plug hat; his elongated figure was draped with the spike-tailed coat, the star-spangled vest, also the blue and white striped trousers with the traditional straps holding their lower edges to the tops of the long-toed shoes. Facially, Mr. Simms needed no disguise to enhance the likeness to the familiar and beloved type of the New England Yankee. He had the thin white hair, the shaggy eyelashes, the peaked nose, the shrewd mouth, and the flowing chin whiskers of the immortal Uncle Sam.

Four natives garbed in the costumes once worn by the clowns then appeared, one of them leading an elaborately spotted and broad-backed horse.

"Until this here Borneo engagement it's mighty near thirty years since I done a clown an' bareback act," the old man explained to his two guests; "but I think I pulls it off fairly well fer a man of my age. Here goes!"

He began a pantomime with the native clowns, belabored them with a slap-stick and a stuffed club, then jumped on the back of the patient horse and artistically fell off. The assembled savages howled with joy. Simms again gained a place astride the horse and rode backward half-way around the ring. In attempting to stand

he again fell. With a leap wonderfully agile for a man of sixty-five he vaulted once more to the back of the horse and gained a standing position.

A hideously painted and tattooed ring-master cracked a whip and slightly accelerated the speed of the lumbering steed. Simms removed the spike-tailed coat and tossed it to Captain Blont. The spangled vest and the old-fashioned trousers quickly were discarded, and the veteran circus man stood revealed in the close-fitting and tinseled garb of a barebacked rider. It was the familiar transformation from the clumsy clown to the trained and graceful athlete, but never before had it been done under such circumstances. For ten minutes old Bill Simms performed such conventional acts as riding on one foot, leaping through hoops, standing on his head, all of which were rewarded with continuous applause, in which Mr. Allison and Captain Blount heartily joined.

Then followed the truly wonderful performance of "John L.," unquestionably one of the most intelligent and best-trained elephants in the history of circusdom, assisted, of course, by Mr. William Simms. A perspiring native ground away at an antiquated orchestrion, and to its strain "John L." waltzed with his owner and friend, stood on his head, on one foot, walked over the prostrate body of Simms, bellowed a fair imitation of "Yankee Doodle," and executed other feats which aroused wild enthusiasm.

"It must be hard work giving the entire show," said Mr. Allison when this act was concluded.

"Lord bless ye, man; I don't give the whole show," declared old Bill Simms. "Not by a darned sight. If the next act don't make a hit with both of ye, I'll give ye the day's receipts. I wants yer opinion of the speech I'm goin' tew make right now. I've spent a heap of time an' thought on it. Here goes!"

Mr. Simms bowed to the four corners of the enclosure, smiled at the spectators, and waved his whip for silence.

"Ladies an' gentlemen!" he shouted, mopping his face with a red bandanna handkerchief. "I know blame' well ye don't understand a word I am sayin' tew ye, ye bloomin' heathen, but I'm practisin' this here speech on ye. The next act, ladies an' gentlemen, is the most wonderful one ever presented tew a civilized audience. Yer humble servant, Mister William Simms, at the risk of his life an' in the interests of science, explored the inmost wildernesses of Borneo—the most savage an' mysterious island on earth—an' after incredible adventures, includin' the slaughter of whole tribes an' the devastation of most of the east coast of Borneo, subjugated the Province of Branderhilo, an' made its king an' his royal cabinet his willin' an' obedient slaves. Cheer, darn ye, cheer!" shouted old Bill Simms, waving the flag.

The applause which followed was sufficient in volume to appease the most eloquent and sensitive of orators.

"That'll dew," cried the old man, lowering the flag. "I now have the pleasure of interjucing tew this here intelligent audience King Swatasoki, the hereditary monarch of the famous head-hunters, or Wild Men of Borneo. King Swatasoki is the champeen collector of heads in Borneo, or elsewhar. By hard an' patient work he has amassed a total of seven hundred an' twenty-three heads, the choicest of which will now be displayed tew yer gaze by King Swatasoki an' his retenue."

Mr. Simms blew the whistle and turned to Marshall Allison.

"This here act has got all them Salome stunts beat a thousand miles," he proudly said. "Here they come! Say, isn't this immense!"

From out the entrance to the dressing tent there emerged the huge form of King Swatasoki. Curved about his nearly naked body was a twelve-foot live snake, whose wicked head poised above the tangled shock of hair of the King. But it was not the snake that long held the attention of Mr. Allison and Captain Blount. Swatasoki bore in each hand what appeared to be a human head. These he held aloft, turning them deftly as he advanced so that all could see the ghastly features.

"Are they real heads?" almost gasped Mr. Allison.

"I should say they were," declared old Bill Simms. "Keep yer eyes on this parade an' let me know if ye think it'll make a hit in Oshkosh."

Following King Swatasoki were twenty Borneo warriors. Some carried long spears with human heads at their ends. Others bore huge trays made of rhinoceros hide, and these were burdened with circles of grinning heads which once adorned the shoulders of the enemies of King Swatasoki. In the rear were two misshapen dwarfs, each of whom bore in his arms five heads which seemed much the worse for wear. As this strange parade paced slowly around the ring its members joined in a weird chant, the refrain being broken by occasional staccato yells and accompanied with dancing steps and wild gestures.

"What dew ye think of 'em?" anxiously asked Mr. Simms.

"It strikes me as—as rather revolting," hesitated Mr. Allison.

"Exactly so," agreed the old circus man. "That's why it'll make a hit, 'specially in such refined centers as New York. Don't ye think so, Cap'a'n Blont?"

"Look at those dwarfs!" exclaimed the Captain.

The two stunted savages who brought up the rear of the procession had begun a juggling feat which held the spectators in a spell. With perfect skill they tossed the ten heads in air, each dried and wrinkled skull revolving as it described its arc. Three times they thus made the circuit of the ring, and Mr. Allison drew a long breath of relief when they disappeared from view.

"It is certainly realistic, Mr. Simms," he admitted.

"An' teaches a fine moral," insisted the circus man.

"I hardly grasp the moral," said Mr. Allison.

"'Don't lose yer head' is the moral," chuckled old Bill Simms. "The next act, an' the concludin' one, is more refined, but not so excitin'. I have taught six of these savages tew ride barebacked, an' none of 'em ever saw a horse until I landed here."

He gave a signal and six white horses cantered slowly out. Standing on their backs were six of the most forbidding humans possible to the imagination. Their normal ugliness was enhanced by smears of red and yellow paint. In their hands were short sections of bamboo cane.

"Ladies an' gentlemen!" shouted old Bill Simms. "Keep yer seats an' don't be alarmed. These here benighted heathen are my eringin' slaves. I wish you to observe the slender pieces of bamboo they have in their hands. These are the famous blow-guns with which they kill friend an' enemy when the lust fer addin' a few heads tew their collection is on 'em. In their native wilds in Borneo they use pizened arrers, the very whizz of which as they fly through the air is fatal to all that hears it. On this here occasion, however, they will not shoot these pizened arrers, but rather some samples of delicious lozengers, packages of which the gentlemanly attendants will pass 'round an' offer fer sale at the small price of ten cents a package. Buy one or more of these delightful confections fer the loved ones at home. Get a move on ye, Swatasoki, an' dew yer stunt. Bow tew the audience, ye confounded savages! Bow an' show yer beautiful teeth!"

Mr. Simms cracked his whip over the heads of the huddled horsemen, causing one of them to fall from his steed, but he sprang back with an agility which brought a smile of appreciation to the wrinkled face of old Bill Simms. Their salute to the audience was an unqualified success.

"Grind, darn ye! Grind, ye lazy Hottentot!" Simms yelled to the native who had charge of the orchestrion.

The instrument wheezed out the strains of a Sousa march, a snap of the whip under the belly of the horse occupied by King Swatasoki set the wierd cavalcade in motion, and the six broad-shouldered white horses ambled slowly about the ring, their ugly riders clinging with prehensile toes to their swaying perches.

Half-way around the circle King Swatasoki adjusted a blow-gun to his mouth and shot a lozenge with such accuracy that it hit one of his fat wives on her dusky cheek. She and her rivals made a wild scramble for it. Then followed a bombardment of disks of candy that set the amphitheater in a furor of excitement, clamor, and confusion. With a dexterity which was marvelous the savage horsemen shot these harmless missiles in steadily increasing volume, frequently into the wide-opened jaws of spectators in the upper tier of seats. Mr. Simms stood near his companions, his homely face mantled with a smile of artistic appreciation.

"On the level, gentlemen, did ye ever see enythin' in Madison Square Garden or elsewhere that could hold a candle tew this here act?" proudly asked old Bill Simms. "Honestly, Marsh Allison, isn't it great?"

"I never saw anything like it," truthfully asserted that millionaire.

"I'm goin' tew call it 'The Wild Borneo Head-Hunters' Horseback Act,'" declared the circus man, "an' you can bet the last dollar ye have that it will make a hit in the civilized belt. I'm mighty sorry I didn't discover this South Sea country before, an' 'specially Borneo," mused the old man. "After forty years of enervatin' career as animal trainer an' circus owner, I have finally struck a place whar excitin' things happen like they dew in books. If I ever get back tew Salem I'll have somethin' worth while tew tell tew my dad, who was beginnin' tew think nothin' worth while ever was goin' ter happen ter me."

"Is your father living, Mr. Simms?" asked Mr. Allison.

"You bet he is," declared the old man. "An' say, *he* has had some *real* adventures!"

A Parfait Gentil Mysunderstandynge

(From an Early Fragment Found on a Medieval Score-Card)

By WALLACE IRWIN

Illustrated by ROLLIN KIRBY

NOWE inne the rane of Olde Kynge Kole
Itte chanst onne summers daye
Nyne Snow Whyte Knytes from Barcerole
For Combatte came thatte waye.
("Odds pumpkins!" cryde the Courte Jes-ter,
"We'll have a bully fraye!")

"HOW shal we fite?" each Snow Whyte Knyte
Out-cryde with angry rore.
Somme cryde "With sordes," somme cryde "With clubbes,"
But goode the Kynge upswore,
"Nay by our sox, a game of Balle
Wil settle that Olde Score."

"WHO wil the Honest Umpyre be?"
The Nyne Knytes upward spoke.
"I'll stand for Itte," replyd the Kynge,
Whose word nunne mote revoke.
("My Liege," remarkt the Courte Jes-ter,
"I hope you maye notte choke!")

"The ball smote Thirdly too"

SOE to the dimond Balling Ground
They alle didde quicklie heele
& inne the boxe Sir Twirler stoode,
Hys helm brite-flashinge zeal,
& atte the plate Sir Thomasse Grabbe
Upraisd hys mytts of steele.

SIR GEOFREY KNOCCKYR came toe batte
And thryce didde vainlie cloute;
Agayn he swope - upcryd the Kynge,
"Odds Wilkins, ye are oute!"
& inne the Stand Sir Aubrey Fann
Lyke wilden-catt didde shoute.

ONCT moar out-fannd the Snow Whyte Knytes
Til sore and pale theye satte,
& onne the bench Lord Clarence Byffe
Cryde, "Wud ye looke atte thatte!"
Thenn sylence alle, as forwarde strod
Sir Casey to the batte.

HE raysd the stycke, he smole a smyle,
The balle came swyft & hotte
With helich hate acrost the Plate—
Goode Grasyus! whatte a swatte!
Itte seemd to scoot a thousand rood
Intoe the Cabbage Lotte.

DIDDE ever Knyte in hardware cladd
For First more swyftlie sneek,
Didde ever Knyte in pig-iron boots
For Second straighter streake?
What ho! he maketh a frisque for Third
And slideth on hys cheeke!

BUTTE as uponne hys cheeke he slode
The Balle was thither threw.
With mail-clad twist of mail-clad wrist
To Thirdly Bagge it flew,
& as Sir Casey's cheek smote Third
The Balle smote Thirdly too.

"NOWE saye, nowe saye, thou Umpyre greye,"
The courtlie Rooters shoute,
"Saye brieflie, pleese, if hee iss Inne,
Or haply down and Oute!"
And rounde Kynge Kole the Mobbe doth surge
Belike as if toe cloute.

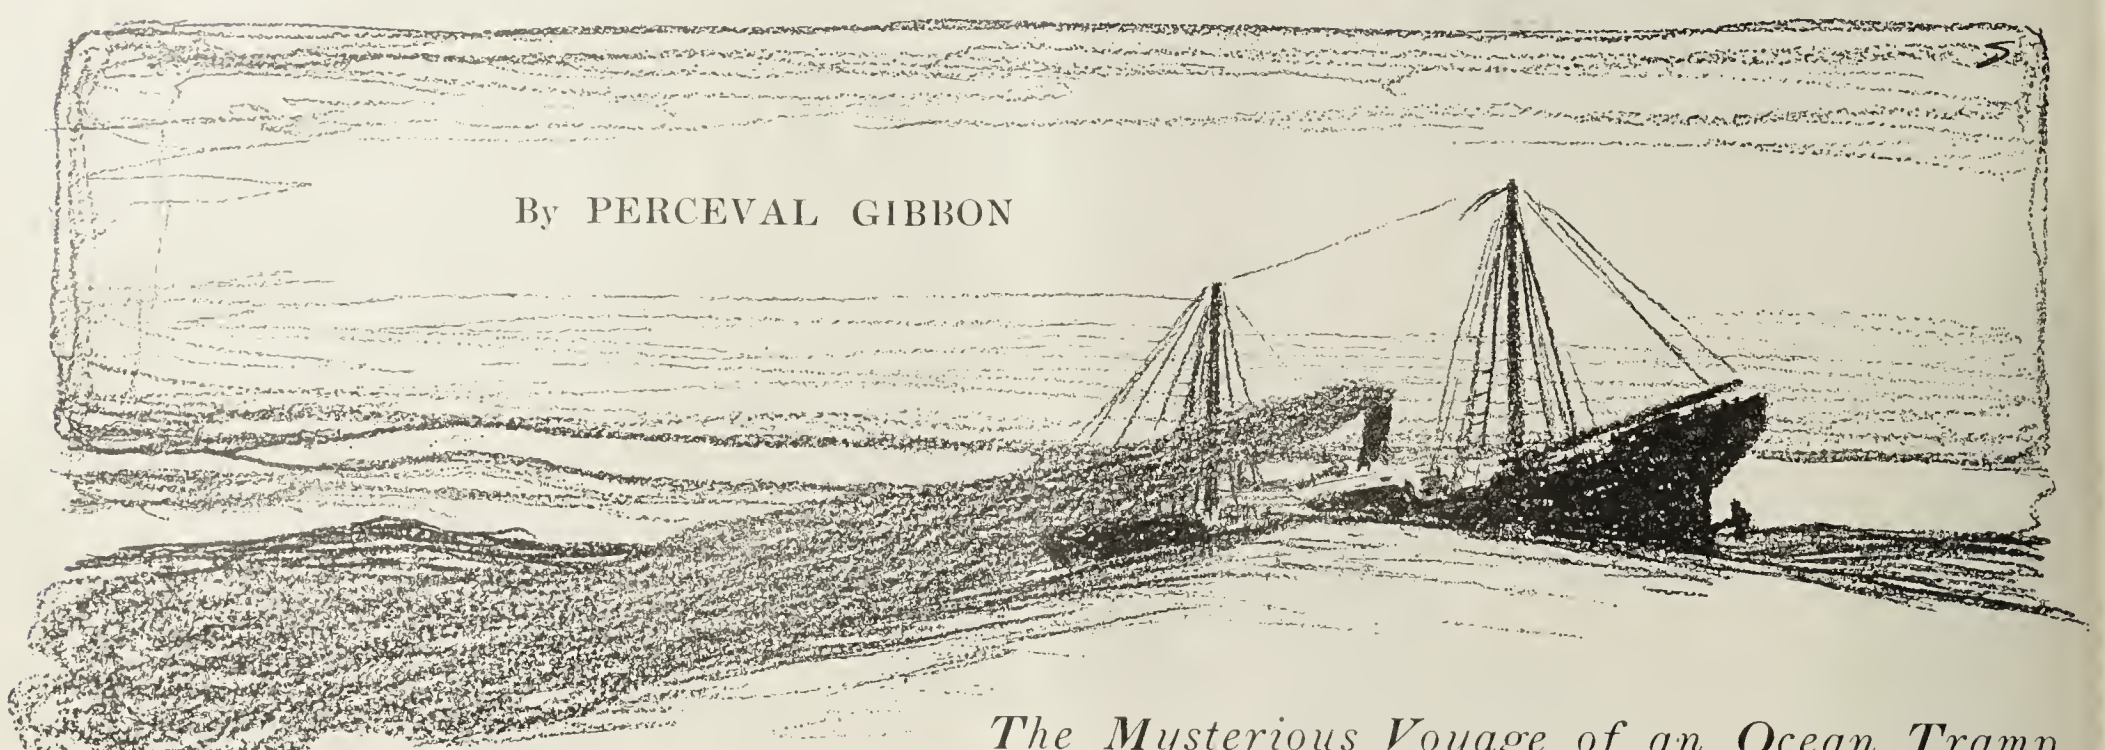
WASSE ever Kynge inne such a plyte
As nobel Kole thatte daye!
Itte were notte safe for toe saye "Safe,"
And "Oute" 'twere deth toe saye—
Kynge Kole hee scratcht hys baldie-spot
And answerd thys-a-waye:

"SITH Casey slyde soe very welle,
This Judgemente doe notte doubt—
One half of hym wasse very Safe,
The other half wasse Oute!"
"Fake, fake!" hys loyalle subjeckts crye,
Betwixt a shreeke and shoute.

A BRYCK was threw til someonne cryde,
"Stay! would ye stryke your Kynge?"
"You bette we would!" theye maddlie yel,
& doe notte doe a thynge
Butte smyte hys crowne & throw hym downe,
With mannie a punch & swynge.

AND as theye rufflie thuss didde act
The Whyte Knytes (fie for shame!)
Made twentie-eight complete home runnes,
And thuslie wonne the game
And rode awaye as Champyons
("Such," sayth the Booke, "iss Fame.")

. . . . . .



UPON hys bedde of Anthracite
Kynge Kole fulle feeblie sanke.
"O Sire," upspake the Courte Jes-ter,
"I speak the truth so franke;
As Kynge you are a kynglie thynge—
As Umpyre you are ranke!"

AND o'er the doore of Old Kynge Kole
The Crowe quothe "Nevermoar!"
(What sayth the auncient Chronikler
Whome we have heard before?
"Old Kole was every inch a Kynge—
And every inch wasse Sore.")

"As Umpyre you are ranke!"

By PERCEVAL GIBBON

The Mysterious Voyage of an Ocean Tramp

THERE was a quality in the chief mate of the *Gatwick* which distinguished him among his sea-faring brethren and made him a little noticeable about the decks of a steamship. The years of his service at sea had left no mark on him; through their stress and labor he had carried untouched a certain urbanity, something smooth and supple in his manner and address, which suggested the traffic of streets and houses rather than the windy solitude of the bridge and far sea-bitten horizons. Old Captain Leigh, alighting at the foot of the gangplank from the cab which had conveyed him from the station, looked at him sharply. A tall arc-lamp on the wharf spluttered over their heads and threw its convulsive light about them, and in its glare the chief mate looked even more foreign to the place than he did by daylight.

"So you're the mate," repeated the captain, still scanning him. "Well, I hope we'll get on together."

Behind them, the cabman, impassive upon his box, looked slowly from one to the other.

The mate smiled pleasantly. "I hope so, sir," he said, in his agreeably modulated voice which was so little like a sailor's. "I'll send the watchman up to bear a hand with your dunnage."

"Right," said the captain, shortly, and watched him drop back to the steamer's deck and go for'ard upon his errand to rouse the night-watchman from his beauty-sleep in the galley.

The cabman sighed and shifted in his seat. The captain turned to him, with a motion toward the luggage piled on the roof of the vehicle.

"You can get those things loose," he said. "There'll be a man up to fetch 'em aboard in a minute."

The cabman grunted and proceeded to unwind himself from the rug about his legs. "Takin' her over?" he asked, with a sidelong jerk of his head at the decks of the *Gatwick*.

The captain was sorting coins in his palm and looked up. "Yes," he said. "Been to sea yourself, eh?"

The cabman grunted again, fumbling with the knots that secured the captain's gear on the cab. "'Tisn't so long," he said, slowly, "since *I* was payin' off a cab on the wharf, and a hand was comin' ashore to fetch *my* dunnage."

"Eh?" The captain looked him over sharply; he was a shabby, stout man with a lean, unhappy face. "What were you, then? Steward?"

The cabman vented a short bark of laughter, as mirthless as a sob. "Steward!" he repeated, and paused.

"What, then?" demanded the captain.

"Master," replied the cabman. He looked down and met Captain Leigh's puzzled stare with an expressionless face. "I lost her," he added, and turned again to his work. It was a full explanation; it needed nothing further to make it clear how a man who had commanded a ship came to be driving a cab. The captain watched him with a sudden sinking of the spirits.

"It might happen to anybody," he said, hurriedly, as the mate came forth from the alleyway with the watchman at his heels. "Here's your money."

"Good luck," said the cabman, shortly, taking it.

His drooping, melancholy face remained in the captain's mind while his baggage was brought aboard and bestowed in his room; the conversation had come like an omen to stay his feet when he was about to set it for the first time on the deck of his ship. He felt vaguely saddened and cast down, and it was with a certain gravity of countenance that he faced the chief mate across the chart-house table when the latter handed over the papers in his keeping. Captain Leigh looked through them expertly while the mate, with a bottle of whisky ready at hand to do honor to the occasion, scrutinized him appraisingly. It was no uncommon type of man that he saw—just the elderly, sturdy shipmaster, brown-faced and white-bearded, with an elemental simplicity underlying all his quick adequacy of mind and body. The mate smiled to himself once or twice as he noted how the captain breathed hard while he read, or tracked figures to their total with the aid of a big spade-ended forefinger.

"Well, that's all right," said the captain at length, as he slipped the india-rubber bands on the documents. "We'll get out on the afternoon tide to-morrow. Everything's all right on board, I suppose?"

"Quite right, sir," replied the chief mate, deferentially.

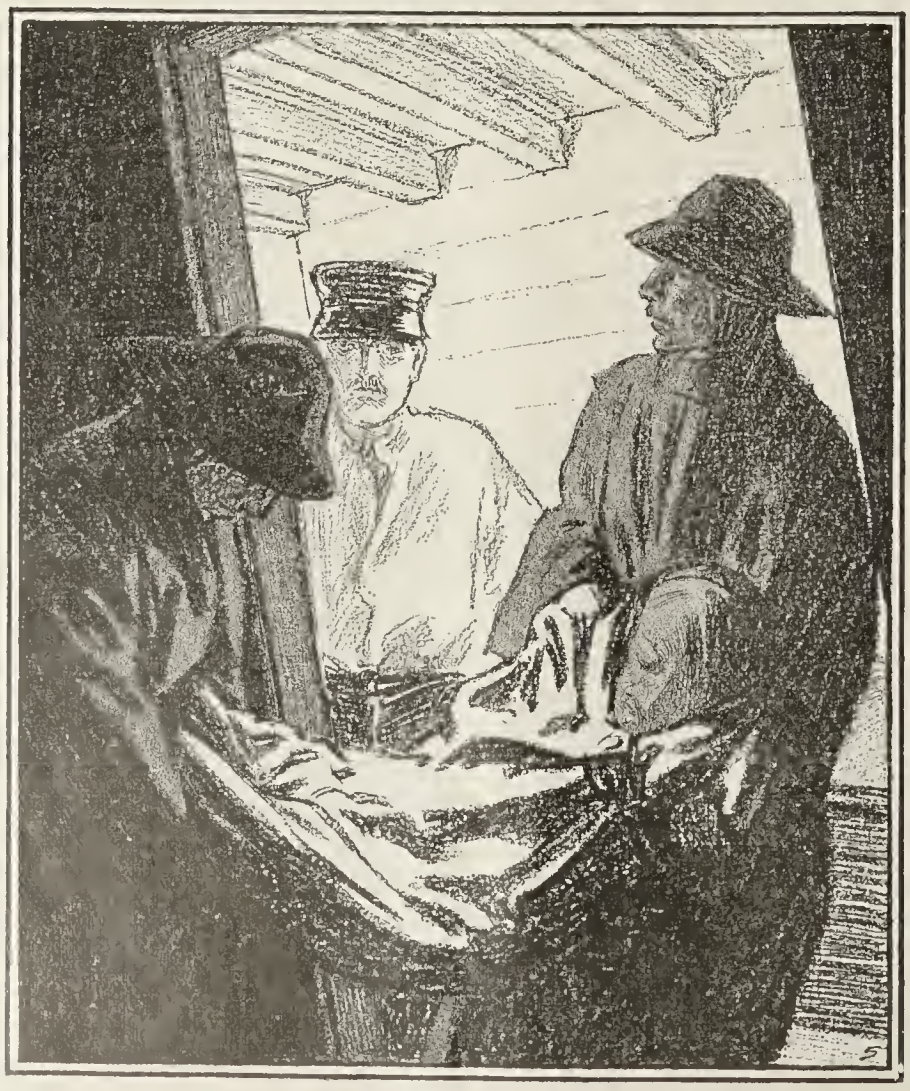
The captain cocked a wise eye on him.

"You have been with her long?" he inquired.

"Six months, sir," answered the other.

He was brown-faced, brown-haired, and brown-eyed—all brown and smooth, but none of it was wind-tan or sunburn. Rather, it seemed that secret hue which goes sometimes with Southern blood. He met the captain's inquiring eye with easy composure.

"Not a relation of the owners, by any chance?" suggested the captain once more.



The mate laughed. "No," he replied. "Not by any chance whatever, sir."

"I thought you might be," explained Captain Leigh. "I was shipmates with a man once who was like you in some ways; he had your style, at any rate; and he turned out to be the junior partner's cousin."

The mate laughed again. His laugh, like all about him, was quiet and seemly.

"No such luck," he said. "None of my cousins own ships, I'm sorry to say." He put out a hand to the bottle. "Will you help yourself, sir?"

"Thank you," said Captain Leigh. "I see by the papers here that old Cap'n Wilks had her before me. D'you know why he quit?"

They carried the mate to his room

The mate shrugged his shoulders. "Well, sir," he answered. "I did hear that something about him came to the owners' ears. Anyhow, they sacked him."

"Sacked him, eh?" Captain Leigh spoke with his glass poised half-way to his lips. "Well, *I* know Sam Wilks, and if anybody told the owners he wasn't as straight a man as ever walked, he lied."

"I dare say," said the mate, indifferently. "Here's to a quick passage, sir."

"Here's luck," said the captain, and drank.

He was still a little puzzled when he turned in to his bunk an hour later; the mate had no place in the category of his experience. The man answered all questions so readily and yet told so little, and was screened, as it were, by such a suavity of composure. The habit of the sea is to take little for granted, and the captain was still thinking and guessing when he fell off to sleep.

Business claimed every moment of his time next day till the *Gatwick* cast off and, with the pilot on the bridge, moved down the stream to commence her passage. It was not till he joined the pilot and rang for steam that the captain got a good look at his vessel. She was no more than a large tramp of some three thousand tons, iron-decked, pole-masted, one of those persistent freight-carriers whose keels cut furrows through every sea on the globe. It was a chill gray day, with a strong wind from the east and a promise of wild weather to come in the North Sea; old Captain Leigh, schooled in every mood of the weather, felt the bite of it on his hardy face and welcomed its boisterous freshness. He was glad at heart to get to sea again. His last ship had met the fate which no shipmaster can guard against. Too old to compete for freights pared down to the last margin of profit, too costly to lay up, she had been sent to the ship-breakers; and for six months he had been hawking his splendid efficiency and unstained record from one ship-owner's office to another.

He had known the sarcasm of clerks, the familiarity of office-boys; the sudden telegram, unexpected and hard to believe, that came to him, bidding him take command of the *Gatwick* forthwith and hustle her to sea without delay, had delivered him out of a thousand troubles at once. The salt of the wind in his nostrils, its hint of a strenuous sea outside, the pale winter sky over his head, were the familiar furniture of the life to which he belonged, and they restored and upheld him.

"Wet night to-night, Capt'n," observed the pilot at his side.

The captain cast a weather-wise eye at the sky. "Snow, by the looks of it," he replied.

"That's so," agreed the pilot. He talked after the manner of pilots at their work, without looking aside from the course before him. He nodded now toward the foc'sle head.

"That's your mate, ain't it?" he inquired. "That young feller for'ard?"

"That's him," said the captain.

"Smart man," said the pilot perfunctorily. But he frowned in thought.

"I don't know yet whether he's smart or not," said the captain. "I reckon I'll know before morning, though, if this wind holds up. But there's something about him I don't understand."

The pilot nodded. "Starboard," he ordered. "Steady as she goes." He watched the ship's head swing to the helm. "He's been well brought up, I shouldn't wonder," he suggested, innocently. "That's what's the matter with him. In my time you didn't hear a mate carryin' on the work with 'please' and 'thank you.' But things has changed since then. Port there! Steady!"

The night fulfilled the day's promise. The pilot went overside to his boat, and the *Gatwick*, with smoke whipping sharp to leeward from the lip of her funnel, lifted her high bows to the rising sea and turned her tail on the faint sunset. Screened by the weather-cloth,

over which he could just see, Captain Leigh stood by to see how she was going to behave. At the other end of the bridge, Trimble, the middle-aged second mate, kept a steady lookout; the chief mate and third officer were still busy about decks making all secure for a rough night. It was obvious that the chief mate, whatever failings he might prove to possess, knew his work and could do it. His voice, quick in command, traveled aft to the captain; he was bustling his men through their business in the best approved fashion. The captain watched him, while stoppers were being placed on the cables. He was coatless, thrusting through a pair of men impatiently to pass the turns himself; Captain Leigh nodded as he saw it. It was his own fashion of working, and he liked it in others.

Snow came with the dark—thin, dry snow like frozen sand, driving level out of the mirk to windward. The North Sea has its own fashion of bad weather; there are times when the send of the sea, rebounding from the shallows of its fishing banks, raises it into the tempestuous class of Cape Horn. With her nose southeast, to keep a good offing, the *Gatwick* had the worst of the weather: she both pitched and rolled, and it was soon plain to her captain that she could do both to an extent that almost disconcerted him. With one rail level with the water, swashing through it with the sound of scythes in grass, she would lift her bow against the dark sky sickeningly, lift it till the racing seas thudded over her poop and cascaded in white upon the winches in the after well-deck. Then, while she staggered, came the counter-roll, and the poising bows swooped mightily, driving down into the piled seas like some stupendous projectile, while the water crashed in forward and the racing screw set up its insane chatter.

The chief mate was on the bridge when Captain Leigh came forth in oilskins, after a scratch meal in the chart-house. He was up to windward, holding by a stanchion, peering motionlessly ahead over the weather-cloth. He turned his head as the captain came forth and clawed his way down the heaving bridge to meet him. In the light from the chart-house windows he smiled under his sou'wester, always that decorous, accustomed smile.

"A dirty night, sir," he said.

"Aye," said the captain. "But I'll be putting her head south in another hour, and she'll not pitch so much."

"But she'll roll more," said the mate. "I know her, sir. She's a beggar to roll."

"Well," said the captain, "I'd rather have her roll her funnel under than pitch like this. Every time I hear that screw race, it sets me praying she won't snap her tail-shaft off."

Even as he spoke, her bow rose again, carving a wild arc across the sky, and her stern sank with a crash of waters that strangled the shriek of the propeller. The captain gasped and then laughed shortly.

"If I wasn't white already, that's what would turn me gray," he said. "You wouldn't think the steel was made that 'ud stand jolts like that."

The mate smiled again. "I've often thought the same, sir," he said. "If ever this ship is lost, there won't be much doubt about how she went."

"No," said the captain. "And some poor devil of a skipper'll get the blame."

He was holding on by the rail of the bridge, against the steamer's heave and jerk, and now again the memory of the cabman returned to him, the man who had lost his ship. Captain Leigh's record was clear of this particular crime. In all the years during which he had coaxed cargoes from port to port upon the seaboards of the world, he had never "piled up." Good luck had waited upon his vigilance and skill, and he had come to take a pride in that fact of his career. There had been times when only luck saved him, when he groped blindly through mishaps and chanced upon the way out; these did not detract from the central fact of his life: he had never lost a ship. As the mate moved off again, to return to his post at the windy wing of the bridge, the captain dropped into musings, and the keynote of his uneasy thinking was the gibbering of the propeller as it climbed into the air with the lift of the stern and the shuddering smack of its descent.

He spent the night between the bridge and the chart-house, where he snatched occasional moments of sleep on the lockers. True to the mate's prediction, the *Gatwick* only rolled the more impressively as she bore off to the southward and the pitching decreased. But that in itself was a relief to the captain's nerves. She could lower each rail in turn till the seas rolled in green and smooth on her scoured decks and the overtaut funnel-stays gave out notes like banjo-strings—at least her propeller was under water all the time.

In this manner she thrashed her way down the North Sea, giving her master an early opportunity to learn her powers and limitations. He decided that while she was, perhaps, the worst sea-boat he had ever known, she was stanch enough, pretty well found, and sufficiently engined. She would wallow like a porpoise in a small lop of sea, but always drive through. For the rest, it did not strike Captain Leigh as a hardship that her behavior should keep him in his clothes for three days and nights on end: that was a mere incidental to his duties as her master. His officers were efficient and trustworthy, his steward quick and clean, and his engineers, hairy Scotchmen, who seemed each to pass his days gripping a bunch of cotton-waste, remained, as engineers should, unobtrusive. He had been shipmates with many worse men in his time, and it scarcely occurred to him to regret that a hint of formality in his chief mate made casual talk with him impossible. There was no joining him on his watch to talk over the innumerable little things that make up the interests of a sailor, details of ships one has known and the men that ran them and the ports in which they lay at anchor. The mate had a way of asking no questions which is fatal to this manner of communion; his contributions were no more than that ready lofty smile and "No, sir," and "Yes, sir."

Trimble, the second mate, was of another kind, a square, middle-aged little man with a hard, good natured face, who had held a master's certificate for twenty years and never once gained a command. He was willing enough to be agreeable to anybody, and his trivial amiability was welcome to the captain when they found themselves together on the bridge. He was one of those men—they go to sea in thousands—with no palate for life. He could not distinguish the quality of a quick run from the Mersey to New York from that of a halting voyage east that brought its vicissitudes to a point in some rapid disaster among coral islands. Happenings of all kinds were but so many items in the catalogue of his years: he remembered them all alike and with equal lack of zest when the talk ran backward to the past. There were many intervals of sociability while the *Gatwick* worked her way into the Channel and so westward which served to spice the flavorless days for both of them.

He produced the infernal machine from behind his back

It was a season of hard weather that took its full toll of shipping, and the *Gatwick* had her share of it. She behaved atrociously, but continued to go: it was all that could be said of her. Day and night her forward deck was a trap of tumultuous water, where men risked their lives as they slid and crawled for'ard or aft. She had a double set of winches there to serve her hatches, and through these the seas went boiling with each roll of the vessel. Most of the men had ugly cuts and bruises to show as results of a hasty scramble between the forecastle and the alleyway; after the manner of sailors, they cursed her comprehensively, and continued to drive her along.

Captain Leigh came on deck one afternoon, when the second dog-watch was wearing to its end, to stand by for a glimpse of Ushant's big beam to corroborate his course. The mate was about decks, seeing all fast for the night; Trimble and the third engineer were smoking under the bridge and arguing noisily about religion. The captain stopped to listen to the third engineer's forcible confession of faith and passed up the ladder to the bridge.

"Never knew a ship roll like this," he said, as she lurched giddily while he was yet on the ladder, and he heard the answering smash of seas sliding green over the plunging rail. From the bridge, when he reached it, he saw the race of waters on the fore-deck, and the [illegible] and his men up to their thighs in it, lashing a winch cover down. Night was coming up starless, heavy with storm. While he looked, the man at the wheel struck eight bells, and Trimble, with his sou'wester pushed to the back of his head, came up and joined him. He was to stand the first watch, and came to look forward at the captain's side till the chief mate should appear to hand over the bridge in form.

"Ought to get a sight of Ushant pretty soon," remarked the captain.

"Yes, sir," agreed the second mate. "But the old scow loses a powerful lot of way, knockin' about like this."

The observation was pointed at that moment by a roll which made them both put a hand on the rail to steady themselves. The *Gatwick* lay down to a sliding hill of sea; Captain Leigh saw the foremasthead slash giddily athwart the sky; her rail went under and ladled in the wild water by the score of tons. Among the winches the men were hanging on anyhow, propped against the shock.

"Hang on there," roared the captain, and upon his words the sea piled on board and buried the waiting men out of sight.

"Holy smoke, look at that," cried Trimble.

She lifted again, and the men and winches poked up stark and gleaming through the water as it streamed across the deck. But with it, floating like lifeless wreckage, went something that both of them saw.

"That's the mate," said Trimble. It was characteristic of him that he said it conversationally, in the tone of small talk, but moved none the less rapidly for that. With his long oil-skin coat flapping, he hurled down the ladder, loud with orders. Craning over the weather-cloth, the captain saw his little stumpy figure shoot out on the foredeck, where the water still ran like a mill-race, sure of foot, ready-handed, vital with force and purpose. A couple of men aided him, and between them they plucked the mate from the scuppers and carried him at an urgent shuffle to the door of the alleyway. They were not a moment too soon, for even as they entered and clapped the door to, the *Gatwick* leaned to port and again the rail plunged under. It was a thumb-nail melodrama, a thing of a vivid moment, one of those matters Trimble would mention years after, baldly and apropos of nothing.

They carried the mate to his room, and there the captain found them. The second mate, the steward, and one of the hands filled the little berth. The mate was laid in his bunk; under the naked electric bulb his face was vacant and unconscious, and the wet from his hair made a big stain on the pillow.

"Where's he hurt?" demanded the captain as they all turned to him, the officer and man clumsy in their oilskins, the steward plump and bland and white-shirted.

"His leg's broke, sir," replied Trimble.

"That's bad," said the captain. "Let's have a look at him."

It needed little looking to bear out the news: it was a leg smashed beneath the knee in a manner quite outside the scope of the simple surgery of the sea. The captain shook his head.

"This is a job for a doctor," he said. "A broken arm, now—or anything simple like that—and I could fix him up. But this is what they call compound."

"Poor beggar," murmured Trimble.

The steward was despatched to fetch brandy, and the foremast hand slipped off with him. The captain and Trimble remained together, looking down on the unconscious man's face. It was curious how it retained, even in its swoon, that cast of suavity which made men turn to look twice at the mate. There was even a hint, in a curving of the lips, of his smooth smile.

"He's a queer beggar," said the captain, more to himself than to Trimble.

Trimble made a soft noise of assent.

"A queer beggar," repeated the captain. "Maybe his face don't do him justice." He turned to the second mate. "I'll have to go to the bridge," he said. "I want to get a bearing on Ushant. Give him the brandy and make him comfortable, will you?"

"Aye, aye, sir," replied Trimble.

"I'll be down to see him again, presently," went on the captain. "And while you're waitin' for the brandy, get him out some dry things."

"I tried to, sir," answered Trimble. "I tried to get some when we brought him in, but everything's locked up."

"Locked, eh?" The captain was surprised. It is not held to be in good taste to lock one's possessions up aboard ship, as though one's shipmates were thieves. "Well, find the key, can't you? Or else bust the things open. Can't leave him lying like that."

"Aye, aye, sir," responded the second mate, dutifully, and commenced to relieve himself of his oil skin coat.

The accident to the mate made certain adjustments necessary, and therefore the third mate was sent for and bidden stand the watch, to be relieved by Trimble at midnight. Captain Leigh kept the bridge with him till Ushant yielded him the clue he sought, and then retired to the chart-house. He was beginning to feel the strain of the passage. It was not fatigue, in the ordinary sense, but rather that nervous oppression that comes of watchfulness long maintained and too small [illegible] ance of sleep. That night, again, would find him [illegible] in his clothes, with one ear wide awake for a [illegible]

...nses ready at call. He slipped out of his coat ...disposed himself with his pipe on the padded lockers ...a little while at ease. It was a pleasant little place. ...teak and brass and white deck, a cozy shelter from the wind that blew upon the bridge; and he closed his eyes willingly. He could sleep anywhere at any time, and it was only a few seconds that he remained conscious of the drum of the sea below him and the ship's movement.

Trimble's arrival woke him instantly. Trimble came in by way of the companion from the captain's room below, and the old man's eyes sprang open at his step and regarded him questioningly. Trimble had something in his hand, which he put down carefully, and a manner of some agitation.

"I came through your room, sir," he said in a low voice. "I guessed you'd rather not have this seen." He pointed to the object he had laid on the table.

"You're pretty free with my room, Mr. Second Mate," retorted Captain Leigh.

"Yes, sir," said Trimble.

The captain sat up and dropped his feet to the floor. The matter to which Trimble pointed his attention was a square wooden box, neatly made, looking rather like those cases which are sold for carrying delicate instruments. "What is it?" he demanded.

"I found it in the mate's chest," he said. "There was a key hanging round his neck by a string, and it fitted his chest. I couldn't make out what it was. I thought maybe he'd got some kind of navigatin' tools in it, so I opened it an' had a look, sir."

He showed the captain that one side of it opened like a slide, and was fitted with a finger notch.

"Well," demanded the captain. "What's it got to do with me?"

Trimble gave him a look almost of contempt, and drew the slide back.

"Queer sort of navigatin' tools," he said. "Now, do you see what it is?"

The captain drew the box to him, and puckered his lips as he peered into it.

"My God!" he cried, in quick horror.

It was an affair of springs and catches and a few toothed wheels, like the bowels of a queer clock. There was a key for winding it up, and a striking mechanism; but the hour it was to strike was that which sounds once for all the world.

The captain looked up at Trimble; his face had suddenly hardened and grown formidable. All that was reverend and kindly had passed away.

"A bomb," he said.

Trimble nodded. "That's why I came through your room," he explained, virtuously. "I'm not the man to do that in a general way, sir. Nobody can say of me that—"

The captain silenced him impatiently. Thoughts were crowding upon him. The *Gatwick* and her tail-shaft, the cabman's talk, the still civility of the mate—these all reappeared as things pregnant with infinite meaning.

"A bomb," he repeated. "I see it now, Trimble—partly. Here's another ship that can't earn dividends—this old hooker that's splashing about under us. What's she got in her hold? General cargo, eh? Insured up to the trucks, eh? And the mate and this clockwork gadget of his were to put her in the way of drawing the insurance money. Gosh, it's as plain as daylight."

He dipped a big forefinger into the apparatus, burying it to the knuckle in the intricacy of mechanism, and probed there for a while. Then, with care and precision, he hooked out the detonator and the harmless-looking bunch of guncotton.

"All ready," he said. "Everything fit and ready to help her to snap her shaft, Trimble. A skipper that never lost a ship, and a ship that was notorious for the way she'd pitch—it all fits together, as innocent as a Christmas carol. The underwriters'd pay without a word. And then I suppose I'd go navigatin' a cab round the back streets and touchin' my hat for a tip."

He glared at Trimble, who smiled awkwardly and motioned to the explosives.

"Better put the fireworks overboard, sir," he suggested mildly.

"Take 'em and heave 'em over," bade the captain. "Then come back here. We've got to see our way out of this."

Long and earnestly they debated over the matter, but they could find no light. It was not sufficient to bring the *Gatwick* safely to her destination; their own employment must be safeguarded as well. And for this there was necessary a business dexterity that neither of them possessed. Trimble was empty of all help: he could only suggest informing the police. The captain waved him off.

"I guess I'll have a talk with Mister Mate myself, to-morrow," he said finally. "Maybe he'll have an idea or two."

The interview duly took place. Under the ministrations of the steward, the chief mate had returned to his senses and his self-possession. His face, paler than usual, looked up from his pillow with a sly acuteness upon it that angered the captain like a jeer. The weather had thickened before midnight and the wind hauled to the northward, so that the *Gatwick*, running south before it, was again pitching extravagantly. It had kept the captain from his sleep, and he had had words through the speaking tube with the chief engineer, an obstinate man and ribald. He entered the injured man's berth abruptly, closed the door, and produced the infernal machine from behind his back.

"What's this?" he demanded harshly, propping himself against the heave of the ship.

The mate glanced at it without moving his head, and his lips curved into a slow smile.

"Lucky Leigh, still," he said. "That's what they call you, isn't it, captain?"

He showed no sign of any distress or surprise; merely a languid amusement.

"You dog," said the captain. "You man-drowning dog. You murderer."

What the World Is Doing:

Scattering 105,000 envelopes upon the stand, representing the applications filed for the Cœur d'Alene Reservation, which with two others has just been opened. The registrations, all told, including those for the Spokane and Flathead lands, reached 287,000, the largest number ever recorded in the United States

The officials, Judge J. W. Witten and his assistants, who presided over the land lottery. The three little girls, Christin Donlin, Harriet Post, and Helen Hamilton, drew the envelopes of the winners, who were thus enabled to take their choice of claims. The drawing began at Cœur d'Alene, Idaho, August 9

The Gamble for Land

The Week

THIS is the week when all the world gathers to fly at Reims, France. Nearly twoscore machines of seven makes will contend in speed and distance races.

Spain at home is quieting down from her throbbings like an uncranked motor. Reports from Melilla tell of reenforcements gathering for the Moorish tribesmen, and a long, scattering, desultory campaign in prospect.

It has been a summer of strikes. A thousand dock laborers at Fort William, Ontario, are trying to raise their wage-scale. A street-car strike which would have tied up Chicago was averted by a compromise of the employers. At McKee's Rocks, near Pittsburg, the Pressed Steel Car Company is turning out the strikers from the company-owned houses. The strike in Sweden, involving, it is said, the unbelievable number of 285,000 workers, is still in progress, although some of the men, in small groups, are returning to work because of hunger.

"It is a vicious bill, but the best we could do," is the summing up of the tariff bill by such Republican leaders as stayed in the ranks of the regulars, but still retained their original manhood.

"What is wine?" said jesting bartenders. Dr. Harvey W. Wiley, the militant pure food expert of the Department of Agriculture, decrees a new definition and standard for wine that it shall be made of grapes. The old-time swift, economical way was to inject sugar and water into the pure fruit of the vineyard.

One more chapter in the Thaw case comes to an end by the decision of Supreme Court Justice Mills, who returns Harry Thaw, the murderer of Stanford White, to Matteawan. He calls Thaw the victim of delusions in time past, and still insane.

William Williams, Commissioner of Immigration at Ellis Island, continues a thorough job by overhauling the immigrant homes—the semi-religious hospices where the friendless and homeless aliens are welcomed. He has ousted the representatives of three such homes from Ellis Island, showing in two of the homes that certain of their guests were later found in disorderly houses.

The Water Power Trust

PERHAPS the prettiest fight pulled off in a twelvemonth is that opened up by Gifford Pinchot, National Forester. "Conservation of Natural Resources" is an unwieldy phrase, but a live wire. On August 10, at the National Irrigation Congress in Spokane, Washington, Mr. Pinchot said:

"There could be no better illustration of the eager, rapid, unwearied absorption by capital of the rights which belong to all the people than the Water Power Trust, not yet formed, but in rapid progress of formation. This statement is true, but not unchallenged. We are met at every turn by the indignant denial of the water power interests. They tell us that there is no community of interest among them, and yet they appear year after year at these congresses by their paid attorneys, asking for your influence to help them remove the few remaining obstacles to their perpetual and complete absorption of the remaining water powers. They tell us it has no significance that the General Electric interests are acquiring great groups of water powers in various parts of the United States, and dominating the power market in the region of each group. And whoever dominates power, dominates all industry."

He foresaw the coming of a "uniform, unbroken, nation-wide covering of a single gigantic trust."

"Bosh," said the mate, dreamily. "What are you going to do with the *Gatwick*, captain?"

The captain stared at him, breathing hard.

"If you've got any sense at all," the mate went on, "you'll tuck that little machine under her tail and touch it off. That's the way to keep to windward of the workhouse, captain. There's money in that that would surprise you." His eyes wandered over to the captain's set face, and his smile flickered again for an instant. "I could name a figure, if you like," he added, thoughtfully.

The captain spat violently. "I'll tell *you*," he said, "what's going to happen. The *Gatwick's* going to float. She'll discharge her cargo and wait for another, and she'll go on humping freight honestly with me in command and Trimble as mate."

The mate smiled again. "She doesn't earn enough to pay for your tobacco," he answered.

"That's the owners' lookout," retorted the captain. "What they lose on her is what they pay for dirtying their hands with trash like you."

The mate sighed. "Think it over," he said. "You must have *some* sense in you at your age. A big fat check, captain—a fender to stand off hard times with. Isn't that better than pushing the old *Gatwick* from port to port till you pile her up somewhere and get nothing for it, besides losing your certificate into the bargain? Man, you've got a brain like a turtle; wake up and grab your luck while it's in your reach."

His languor had broken into a persuasive urgency; his voice was hasty and contemptuous. The captain gazed at him dumbly, without words to crush him. He felt impotent and futile in his bluntness and directness in the face of this man's facile speciousness. He took the infernal machine in his hand again, and without a word quitted the cabin.

He was dazed; Trimble could get nothing out of him. And of a sudden he felt very weary. The new problem, coming on top of all his work, mastered him. He swore when he found the unrepentant chief engineer waiting to see him, with a maddening, absurd suggestion that he should change the steamer's course, as the continued pitching was 'vara soothin', nae doot, tae them that's got naething to do but walk about in the fresh air: but, man, it's makin' wark doon i' the engine-room."

"D'you think this is a yachtin' trip?" demanded the captain hotly. "Why don't you ask me to make the wind shift round?"

"Because I'm aweer o' yer leemitations," replied the chief engineer, cuttingly, and withdrew.

It seemed to the captain but a few minutes from the time that he threw himself on his bunk till he started awake, but the light that showed through his porthole was the light of afternoon. He noted it even as he sat up with both ears cocked; even in his slumber of utter weariness the strong sea-habit had told, and he knew the meaning of the jar that passed through the ship and the change in the note of the engines—their thud quickening to a tattoo that stopped short suddenly. He was at the door before Trimble could knock at it, and his quick question forestalled the second mate's news.

"Tail-shaft gone?" cried the captain.

"Like a carrot," was the second mate's answer.

He was a man of slow wits in all things unconnected with his trade, and he stared uncomprehendingly at the skipper's laugh. That was a time of urgency, for the *Gatwick* fell off at once, and for a while it looked as if she would roll right over. There was risky work on those water-scoured iron decks before they made shift to get canvas on her aftermast—tarpaulins and awnings, sails of dire emergency—that slowly brought her bluff bows up to the wind and held them there. The smoke-rotted jigger split to rags at the first attempt to hoist it, and even the deck hands, steamboat sailors without exception, knew enough to note with admiration the old skipper's ready ingenuity and sturdy seamanship in improvising workmanlike substitutes. She behaved abominably, but at least she kept her keel under water. And in this manner the affair was taken out of the captain's hands.

It was early next morning when the captain went again to the chief mate's room, to be met with a smile from the pillow. He answered it with a smile no less genial, if not so friendly.

"You see," said the mate, before the captain could speak. "You see?" He had the manner of one who makes things plain to a child. "It would only have been assisting nature, after all."

"That's all," agreed the captain.

The mate shot a quick glance at him.

"You were very high and mighty about it yesterday," he said. "You feel different now, I suppose. Well, you'll not get so much out of it. When are you going to leave her?"

"Leave what?" demanded the captain.

"The ship, man," cried the mate. "She's riding pretty badly, I notice."

The captain laughed; the other, hearing it, grew grave.

"You're—you're not going to leave her?" he cried. "Man, be wise."

"Oh, I'm wise enough," said the captain. "But I'm sorry to put the owners to expense. Still, for a fine, sound boat like this, such a handy boat in a seaway—"

The mate gripped the edge of the bunk.

"For the Lord's sake," he said, "get it out and let's hear."

The captain stopped laughing and stepped closer to him.

"Listen, then," he said. There was a noise of feet on the deck above them. "They're putting a boat over. But we're not going to leave her, Mister Mate. There's a steamboat standing by; she came up in the night; and we're sending a tow-rope aboard of her. It'll cost something cruel; her skipper's a shark for money; but, at any rate, the *Gatwick's* going to keep afloat and I'm going to command her. D'you understand?"

The mate nodded and lay back on his pillow.

"At any rate," he said, after a pause, "I shall get a doctor for this leg of mine. It's beginning to hurt in earnest."

A Record of Current Events

These spirited remarks of Mr. Pinchot's were universally interpreted as an attack on Richard A. Ballinger, Secretary of the Interior. Secretary Ballinger, in reply, said:

"I have information from Washington that the public records show that not a single power site or dam site was taken by private individuals during the time that one million acres were thrown open to public entry last April."

The General Land Office makes substantially the same reply. They say:

"At no time since the administration of Secretary Ballinger have any power sites been filed upon in Montana. The only water-power sites on the watersheds of the Missouri River not now under the control of the Government under Secretary Ballinger's orders of suspension are sites which have been in private ownership for several years, and two additional sites which are improved and developed to run the street-cars and lighting plants of Helena and Butte and the mines in Butte."

There are two points at issue: The first is the question of fact as to whether power and dam sites were filched from the vast acreage thrown open to the public in April by Mr. Ballinger. The second is a question of method. Mr. Pinchot says:

"Rigid construction of the law works, and must work, in the vast majority of cases, for the benefit of the men who can hire the best lawyers and who have the sources of influence in lawmaking at their command. Strict construction necessarily favors the great interests as against the people, and in the long run can not do otherwise. Wise execution of the law must consider what the law ought to accomplish for the general good."

Playing at War

BOTTLING Boston was the first maneuver in which field officers had been allowed ground enough in which to fight out a real war problem. It brought together the distinguished veteran of the General Staff, the raw-boned militiaman from up State, and the seasoned soldier of the Fighting Tenth Cavalry. All barked their shins together in a war movement in which everything was real but the bullets in the guns.

There were automobile trucks that went with the speed of cavalry to the front, richly laden with the all-necessary "belly" on which the soldier fights. And there were more automobiles with soft-cushioned seats in which the commanding general of the invading Reds and his staff were conveyed from danger point to danger point. The old-time messenger on horseback, flying along with his trusty spur dug deep into his frothing nag's side, was very much of a back number.

The game cost Uncle Sam $500,000, but he was glad to spend the money. There were 16,000 men involved, and most of them were the beardless boys to whom the Government must look for its efficiency in war for another ten years at least.

The Car Strike

IN THE August "Survey" we have the first clear, unbiased account of the steel car strike near Pittsburg. It is written by Paul U. Kellogg, whose knowledge of the facts in the case seems to be as wide as his human sympathy. The McKee's Rocks strike was caused by a sweeping reduction in wages in the plant of the Pressed Steel Car Company, where five thousand men of ten nationalities are employed. The company installed a system for speeding up the major departments, they revolutionized the system of

Prescribing the Tonic for Agriculture

The Seventeenth National Irrigation Congress in session at Spokane, Washington, on Monday, August 9. On the platform, at the left, is seated President George E. Barstow. R. A. Ballinger, Secretary of the Interior, and ex-Governor G. C. Pardee of California made addresses upon the reclamation projects of the Government

An Unaccountable Wreck

While running at fifty-five miles an hour, near Bristol, Tennessee, on August 12, the engine of the New York and New Orleans Limited, Southern Railway, suddenly left the track and plunged down an embankment. Two people were killed, while numerous others were injured. The cause of the wreck is unknown

The Aldrich Senators

By MARK SULLIVAN

How the Senators Voted on the Tariff

There were in all one hundred and twenty-nine roll-calls in the Senate on the tariff. This table shows how often each Republican Senator voted AGAINST Aldrich, how often WITH Aldrich, and how often they did not vote at all. The list is printed in the order of the number of times they voted AGAINST Aldrich—in the order of their relative insurgency, so to speak. A few especially remarkable pro-Aldrich records on the part of Western Senators are underscored. (Lorimer was not elected until late in the session, and participated in only sixty roll calls.) For further explanation of the significance of this table and of the various figures, read the rest of this page

	Voted AGAINST Aldrich	Voted WITH Aldrich	Not Voting
La Follette, Wisconsin	106	18	5
Bristow, Kansas	101	27	1
Clapp, Minnesota	91	20	18
Cummins, Iowa	89	31	9

The Aldrich Senators and the Aldrich Map
This cartoon, by McCutcheon, was printed in the Chicago "Tribune" during the height of the tariff debates and was reprinted in Collier's. It is again printed here because the complete record of Senatorial votes printed on this page makes it possible to give names to the cartoonist's manikins who obey Mr. Aldrich

THE man who keeps the hardware store in Muscatine, Iowa, is Theron Thompson. Writing to this paper last week Mr. Thompson asks:

". . . Actually we do not understand out here why things should go as Aldrich desires them. We try to grasp it and wonder. . . ."

Now Mr. Theron's question and the question of many thousands who wonder what is the secret of Aldrich is answered by the figures on this page.

There is no magic in Aldrich except his certain understanding that a given number of Senators will always vote with him. His name begins with "A," he leads the roll-call; he votes and leans back in his seat with the calm assurance that a working majority will vote "yea" if he said "yea," and "nay" if he said "nay." That is all there is to Aldrich. There were 129 votes on the tariff. Some were vital, some were perfunctory matters of parliamentary procedure. But in little matters as in great, Aldrich's faithful band were always with him.

On those 129 ballots, four Senators *never voted against Aldrich once*. (For their names see the table.) Sixteen Senators voted *against* Aldrich just one time out of 129 (for names see table); seven more Senators voted *against* Aldrich twice—two times out of 129 (for names see table); six more Senators voted *against* Aldrich just three times out of 129. Three more voted against him four times, and one voted against him five times. These men had no convictions about the tariff that Aldrich didn't have first.

Of the correct and necessary inferences from this table, many pages could be written—but the table tells its own tale. Of the inevitable inferences, the most obvious is involved in these questions:

How can two Senators who represent the State of Utah justify their voting with the Senator from Rhode Island just 129 times out of 129 (Smoot), and 117 times out of 129 (Sutherland)? Why the other New England Senators should vote with Aldrich is explainable, though not very creditable; the tariff was made in New England's interest—but the Western Senators are a different matter.

How can Flint of California justify his voting with Aldrich 111 times out of 129, and against him never once? Are the interests of California and Utah identical with the interests of Rhode Island?

And the same as to Dick of Ohio. Do the outrageous duties on cotton cloth and clothing—made to suit the wealthy interests which Mr. Aldrich works for—do those duties please the people of Ohio? Dick voted for them.

Is Michigan pleased with the fact that Burrows voted with Aldrich 126 times out of 129, and that Smith voted against Aldrich only ten times?

Did Carter truly represent the people of Montana when he voted *with* Aldrich on every vote except 8? Within a year Carter must come before the people of Montana for reelection.

When the Insurgent Senators of Minnesota, Iowa, and Indiana returned to their homes, they were received with extraordinary expressions of public approbation. If these Insurgents were right, surely the Aldrich Western Senators must have been wrong.

We hope the newspapers of every Western State will press these questions home to every Senator who was an automatic "O. K." for Aldrich.

How Your Senator Voted

AN amplification of the record on this page has been prepared by Collier's and will be sent to any person on receipt of fifty cents. This larger record gives:

The subject of each of the 129 votes taken during the session.

How Senator Aldrich voted on each roll-call.

Whether each motion was carried or lost.

The total vote on each roll-call.

The party vote on each roll-call—how many Republicans, how many Democrats voted "yea," "nay," etc.

The official reference to date and page of the Congressional Record.

How the Senator voted whose record you desire.

This larger record is in effect a simplified digest of the work of the recent session of the Senate. To secure it, address Collier's Congressional Record, 901 Munsey Building, Washington, D. C.; enclose fifty cents in stamps or any form of money, and give the name of the Senator whose record you wish.

Meat vs. Beans

Here are two pounds of beans and two pounds of sirloin steak. The beans cost 20c, the steak 45c. Yet the meat contains the lesser nutriment.

Beans are 23% nitrogenous—84% nutriment. They are Nature's premier food.

They contain more food value than beef, or eggs, or cheese. Yet see how little they cost.

They are appetizing and hearty. All people like them. They may be served in a dozen ways.

They should be a daily dish, not an occasional. They are our most economical, most staple food.

The trouble has been in home baking.

In a dry oven, the center beans of a baking dish never get half heat enough.

The particles are not separated so the digestive juices can get to them. The result is the beans ferment and form gas. You call them a heavy food.

The top beans are crisped, the middle beans mushy and broken. You have spent sixteen hours to prepare them, yet they are not an inviting dish. That is due to your lack of facilities.

Beans must be baked in a steam oven, as we bake them. The heat for hours must be maintained at 245 degrees.

They must be baked in small parcels, as we do, so the full heat goes through.

Then the beans are mealy—then they all digest. Yet the skins are unbroken. The beans are—as all people like them—nutty, mealy and whole.

Beans, to be digestible and wholesome—to be even inviting—must be factory baked.

Then we bake the tomato sauce with the pork and beans to secure our delicious blend.

We send them to you ready to serve. A dozen cans on the pantry shelf mean a dozen meals ready any moment.

They remain till you use them as fresh and as savory as when they came from our ovens.

Please learn what such beans mean to you. Then you'll never bake beans at home. You will serve beans five times where you now serve them once, and save a great deal on your meat bills. Millions of housewives have proved this already.

Van Camp's PORK AND BEANS

BAKED WITH TOMATO SAUCE

Don't judge Van Camp's by other ready-baked beans. Van Camp's now outsell all others together, because millions have learned the difference.

We have spent 48 years in perfecting this dish. We ought to know how best to prepare it.

We use only the whitest and plumpest Michigan beans —picked out by hand from the finest beans grown. They cost us four times what some beans would cost.

We spend, to make our tomato sauce, just five times what common sauce sells for in bulk. For we make ours of whole, ripe tomatoes, ripened on the vines. Thus comes our sparkling zest.

We could easily put up a cheaper dish—a dish that would pay us more profit. But the best possible beans are the cheapest for you, because people will eat more of them. So they are best for us.

The only way to get beans as good as they can be is to insist on Van Camp's. You'll never take others then.

(2)

Three sizes: 10, 15 and 20 cents per can.

What the World Is Doing

(Continued from page 19)

wage payments, they cut wages—all within a space of six months—and they jammed through these rapid-fire changes in an autocratic way. They will not tolerate petitions or meet with representatives of the men, and they refuse to arbitrate.

F. N. Hoffstot, president of the company, says: "There is nothing to arbitrate in the present difficulty. The officers of the company will not meet with any committee of the men."

Near to the plant are rows of box-like company houses, filled with Slavs, and making up what is popularly known as Hunkeyville. Under the name of the Fidelity Land Company, the Pressed Steel Car Company owns two hundred double houses. A laborer can not afford to rent one of these houses unless he fills it with lodgers.

Says Mr. Kellogg: "The company has a general reputation for consideration of Hunkie-life very much in keeping with the contempt it accords its employees industrially—as machine tenders rather than men. These employees it had gathered from the four ends of the earth; and it had seen to it that there was no trace of unionism among them."

The strike is the protest of "the half-assimilated, the half-Americanized, the half-skilled against the very industrial policies which have brought them here, and which, by the deploying of fresh migrations, tend to keep them all down to what the company calls 'ordinary day labor.'"

The Nocturnal Aeroplane

THE aeroplane when it stays out after dark must hang signal lights. Such is the new ruling of the Aero Club of France. "Every aviation apparatus when traveling at night or during a fog must be fitted with a green light on the right, a red light on the left, a white light in front and below."

It will be stirring to see the firmament splashed with red, green, and white from the darting, night-ranging aeroplanes. Racing lights will tear madly through the midnight, like comets with a purpose. Then they will slow down and come to anchor in the infinite, twinkling like aerial drug-stores through long summer nights. The cry will go up: "Watchman, what of the night?" And the watcher, leaning earthward, will report: "A biplane hangs by Saturn. And just over Chicago and under the Milky Way, two Bleriot monoplanes are racing toward the Great Bear."

The Crackling of Thorns

NOW and again in a colorless item you get a human note. Such is the anecdote of the new School Superintendent of Chicago, Mrs. Ella Flagg Young. When she was a frail little schoolma'am in her first school, she said to the boys who overwhelmed her with their noise and roughness:

"Why do you laugh at me when I am doing the best I can? What is the sense of laughing at a person who is doing the best she can?"

The Lake That Came Back

FLOATING, difficult in fresh water and something of an art in the sea, becomes in the Great Salt Lake a condition impossible to avoid. Lie down and you lie half above the surface; enter it below your depth and you will walk along after you have sunk to your armpits, provided only you can keep your balance. No one ever drowned in it, although there have been deaths from strangulation; a gallon of it boiled yields a quart of salt. Orson Pratt, the first permanent white settler on its shore, swam in it on July 26, 1847.

Since that time the Great Salt Lake has become the principal tourist-baiting asset of one State and the center of frequent excursions from another. This year it is being celebrated as the "lake that came back." Among its other mysterious traits is that of disappearing in large part upon occasions.

In 1893 an immense bathing pavilion was built a mile out in the water, with bath-houses running in crescent-shaped lines toward the shore from both sides of the pavilion. In 1900 the lake began to go away. In 1904 bathing conditions were so bad that the bathing-house proprietors had to turn the horns of their crescent the other way about. And then from one of them they had to run an improvised trolley another mile out to the water. In 1906 a general cry went up that the lake was gone, and likewise a cry went to Washington for governmental relief for

Needs No Painting

Amatite ROOFING

SEND FOR FREE SAMPLE

AMATITE Ready Roofing is waterproofed with two layers of Coal Tar Pitch, *the greatest waterproofing material known*. Storms, heat and cold will not injure it in any way.

After Amatite is laid on your roof it will protect you without any care or attention.

It also has a *real mineral surface*. This mineral surface needs no painting of any kind.

Amatite is easy to lay; no skilled labor is required—you can do it yourself. Just unroll the Amatite on the roof, lap one layer over the next, cement it together and nail down. That's all.

Free sample and booklet on request. Barrett Manufacturing Company, New York, Chicago, Philadelphia, Boston, Cleveland, Cincinnati, St. Louis, Pittsburg, Kansas City, New Orleans or Minneapolis.

the arid West. Secretary of the Interior Garfield responded with a trip of inspection in June, 1907, and for the fourteen days he was in the Great Basin country it rained. Then he sniffed. "My conclusion is," he said, "that what the arid West most needs is a boat and a set of navigation laws."

This summer the present generation of swimmers is completing the finest season in their memory. They dance upon the pavilion above six feet of brine, and the tiny sailboats that once anchored away off near the horizon now tie up to the pavilion, while the crescent of bath-houses has again had its horns—or at least one of them—turned in toward the shore. Harriman's celebrated engineering masterpiece, the Lucin cut-off across the lake, was built when the engineers believed that the drain of irrigation had permanently sunk its level. It is not quite endangered yet by the return of the waters, but another season's rise on top of the present remarkable gain may make the railroad engineers anxious.

The Prince of Peace

THE Hebrew prophets used to celebrate the coming of a Prince of Peace. The four gospels give hints of a like concept. This ancient idea, pleasant enough for a nomadic people, has broken down in the minds of some of the modern ministers of the Word. While England is pleading for more *Dreadnoughts* in the water and for more soldiers on the dry land, some of her clergymen join the cry for the men who can ride and shoot, and for the ironclads with the big guns.

Straight from the altar of the Meek and Lowly One comes the Vicar of St. Peter-in-the-East, Oxford, John Huntley Skrine, with his message: "To preach the eternal lesson of the Cross in the terms and with the instances of the hour," and "To join the Territorial Army like Christians."

"When shall we be able to present the gospel doctrine of sacrifice in a form so practical and so plain?" he asks. "How can we preach the lesson of the Cross more pointedly than when we may tell the idler and malingerer that he is no Christian, and assure the chivalrous that to go for a soldier is to go on a crusade?"

Waiting at the Tavern Door

LIKE the blood that follows a tooth, every bit of lawmaking is embedded in warm human life, and the slightest list and wrench make the surrounding parts rock with pain. Excellent is the new English statute, the Children Act. Every public house in the amalgamated islands is decorated with this sign:

"Children under fourteen years of age will not be served in this bar."

The purpose of the enactment was to keep tiny children from frequenting evil resorts, where they could pick up language and drink. But watch its workings in the troubled lives of the poor.

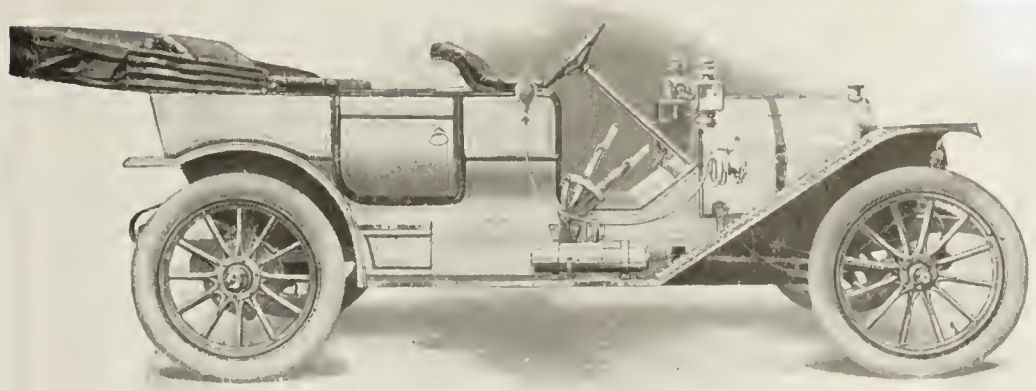
A tour in London was made out Whitechapel way, the Portobello Road, Victoria Dock Road, High Street in Deptford, and Lambeth Walk, to see the section and the children playing in the streets. The mother and the father still go for their drink, and take hours to it. In the former days the child was carried into the shelter of the bar. Now it is left outside in the rain or under the sun.

Here are a couple of items from the tour.

"Portobello Road District:

"HOUSE No. 2—Six children (the house was very crowded), one being a tiny baby which looked a few days old, but which its nurse, a mite of six, informed me was two months old. The children here were in various stages of ennui.

"Whitechapel District:



"HOUSE No. 4—Two babies of two and three, a girl of seven, and a wee morsel of humanity a fortnight old (so far as I could judge), in a perambulator, were the waiters here. The little girl had been given a halfpenny for keeping a watchful eye on the lot, and seemed oppressed by her responsibility. The mite in the perambulator kept up an incessant wail, which it was the little girl's duty to stifle by means of a penny 'comforter.'".

And so it went for many public houses in the East End of London.

One publican hired a shop next door to his tavern and fitted it up as a crèche, with a woman in charge, and welcomed the waifs who had been dropped at the tavern door by thirsty parents. Straightway certain of the temperance people accused him of evading the law.

What a picture of life all that gives—the dreary children, and guzzling parents, and the mean streets. To Ruskin a land that made its young girls weary stood condemned. But unhappy too is a people which allows some of its children to be wrecked.

o

$3,000 Worth of Automobile for $2,000

THERE are two ways of buying an automobile. One is to pay *too little*. The other is to pay *too much*.

If you want to get all of the real pleasure and satisfaction out of motoring, you've got to have *the automobile* to do it with.

Try to economize too much in the purchase of your car—and you do it at a sacrifice of *your* pleasure, the pleasure of *your family* and *your friends*.

It is now needless—since the event of the Haynes Model 19—to invest a young fortune for the *most satisfactory car made*.

Pay $2,000.00 for this new Haynes car, and you get everything that's worth having on an automobile. You get style—workmanship—mechanism—all-around quality.

Pay *more*—and you make an unnecessary investment. Pay *less*—and you're apt to get an unsatisfactory car—short-lived and full of troubles—one that you will want to dispose of (at a sacrifice) as soon as you get a taste of the pleasures of motoring.

Did you ever stop to think that the man who has run one of the cheaper cars, who sells it and gets a larger, more roomy, elegant machine such as our Haynes Model 19—never enjoys riding in the cheaper car again? He has *graduated* from the cheap-car class.

As motor cars become more popular, and people become more educated on the question of buying—more people are buying *right* the *first* time.

It's expensive evolution in car-buying to work up through the cheaper and smaller cars to a *satisfactory* car at last—because there's bound to be a loss on every small car you sell—to say nothing of the expense of maintenance while you own it.

This Model 19 is intended for two classes of buyers—those who are *through experimenting* and those who want to *avoid* it.

It is distinctly a car for *conservative* buyers.

No matter *what price* you intend paying for a car, you ought to get the facts about this car *before you buy*.

After you have seen it and ridden in it and controlled it you will appreciate its *positive $3,000.00-value*.

If you want something better (and cheaper) than a one-season car, and a car that you can feel *proud* of in the company of even the highest-priced cars, let us send you the facts about this Model 19 and tell you when you can see it and have a demonstration.

Use this coupon for your convenience.

STERLING BLUE TUBES

Writing State Histories

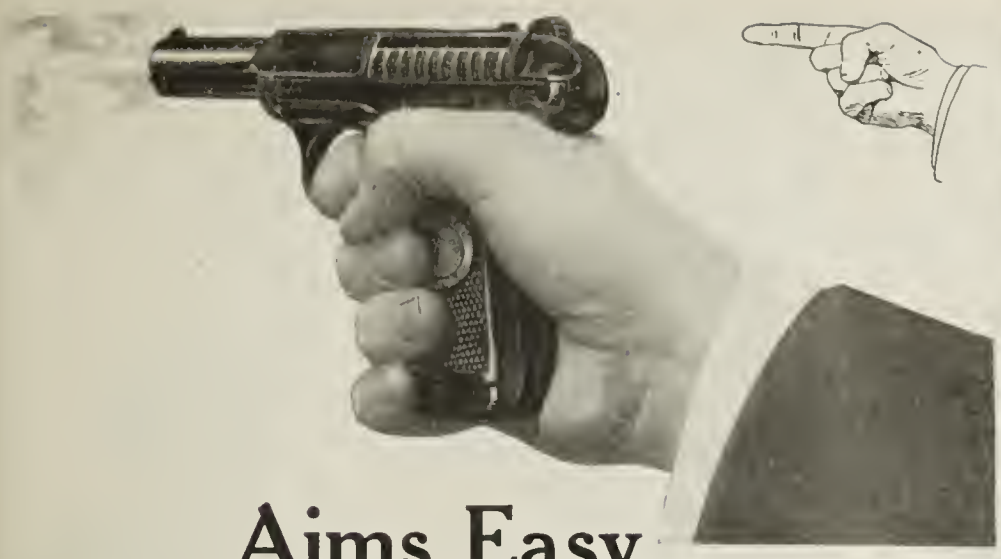
AMONG those writers of State histories who treat of commonwealths west of the Mississippi River there is too often a marked tendency to give emphasis to the story prior to Statehood rather than after Statehood, thereby making their works Territorial rather than State histories. The stories of aboriginal tribes, Indian wars, block-houses, scouts, prairie schooners, blazed trails, explorers, and pioneer camps linked by pony expresses and the stage-coach of romance are as clearly a part of the story of any Western State as are the stories of Columbus's voyage, the settlements of Plymouth and Jamestown an integral part of the real history of the United States, but we should be compelled to dismiss as ill-balanced an alleged history of our country that adequately covered this background to the exclusion of the great events that occurred after the Liberty Bell had delivered its message. An up-to-date history of the nation that treated of Washington and Lincoln as political incidents and flatly ignored such prominent actors in our national arena as Webster, Clay, Calhoun, Monroe, Madison, Grant, Cleveland, and Roosevelt would be no more unbalanced, for instance, than the recent history of the State of Wisconsin, by Reuben Gold Thwaites, in the States History series of Houghton, Mifflin & Co. As a story of territorial Wisconsin, Mr. Thwaites has done an admirable, intimate, and comprehensive work, but as a State history its omissions are misleading. Though Wisconsin has been a singularly progressive State, and though it has had Governors of national reputation, these facts are not even mentioned in this so-called State history.

In pleasant contrast to works of this kind is the "History of the State of Washington," by Edmond S. Meany, Professor of History in the University of Washington, just published by the Macmillan Company.

Professor Meany begins his story at the time when the troubled seas of the globe were vomiting huge mountain ranges. In starting any history it would be difficult to get ahead of that. In a few pages we have followed the great glacial slides carving out broad valleys, and are then brought up to a relief map of Washington, which shows us the neatly finished product of it all, just as a foundry machine at one end bites off a piece of cold iron and at the other pops into your hand a neatly turned tool.

Given the State, Professor Meany takes his readers along on every important ramble his Northwest country has known. He talks of Lewis and Clark as if they were his first cousins and he expected them back for a visit almost any time. The author seems to have been with every Puget Sound voyager, from Vancouver to Dewey, and with every pathfinder, from Frémont to the Great Northern. These stories, chronologically and admirably told, are full of romance and power and with that grateful welcome touch that gives the reader a smile whenever a smile is due.

Though Washington, as a State, is still of tender age, this author has appreciated the important fact that the historical importance of any country grows as it multiplies in population and advances in civilization. Nearly a hundred pages are devoted to the story of Washington's Statehood and the administrations of its first five Governors.



The work is invaluable to any student of our Northwest, and by the readers of history's real romances it will receive a hearty welcome. R. L. J.

The "History of the State of Washington," by Edmond S. Meany. The Macmillan Company. Illustrated. $2.25 net.

Romance

AS NOVELS are read by a larger public than any other species of literature except newspapers, they give rise to many interesting and important questions. The writer of this review is sometimes puzzled about his own attitude toward them. That attitude varies profoundly with his condition and the accidents of his life. At certain times, wrapped up in history, biography, or science, he is so preoccupied raeing against the shortness of life for a small fraction of the information a man ought to have that it would be altogether impossible for him to turn aside to books which absorb

(Concluded on page 26)

Aims Easy As Pointing Your Forefinger

NO unnatural, awkward, drawing up of the wrist to get aim, as in the case of revolvers. You simply jerk the Savage Automatic out of your trousers watch pocket quick, point it instinctively as you would your forefinger, and the bull's eye is hit nine times out of ten. ¶That's one reason why the Savage Automatic always gets in the first shot, and aims so sure. Wrist twisting takes time and spoils aim. Shoots as fast as you can pull the trigger. ¶Why the Savage Automatic is the quickest, powerfulest, safest, most notable pocket arm invention since the revolver over thirty-five years ago is told fascinatingly and pictorially in a beautiful free book. Send for it. ¶6½ in. long. 19-oz. Flat. Buy of us if your dealer doesn't keep Savage Automatics. Made by the makers of

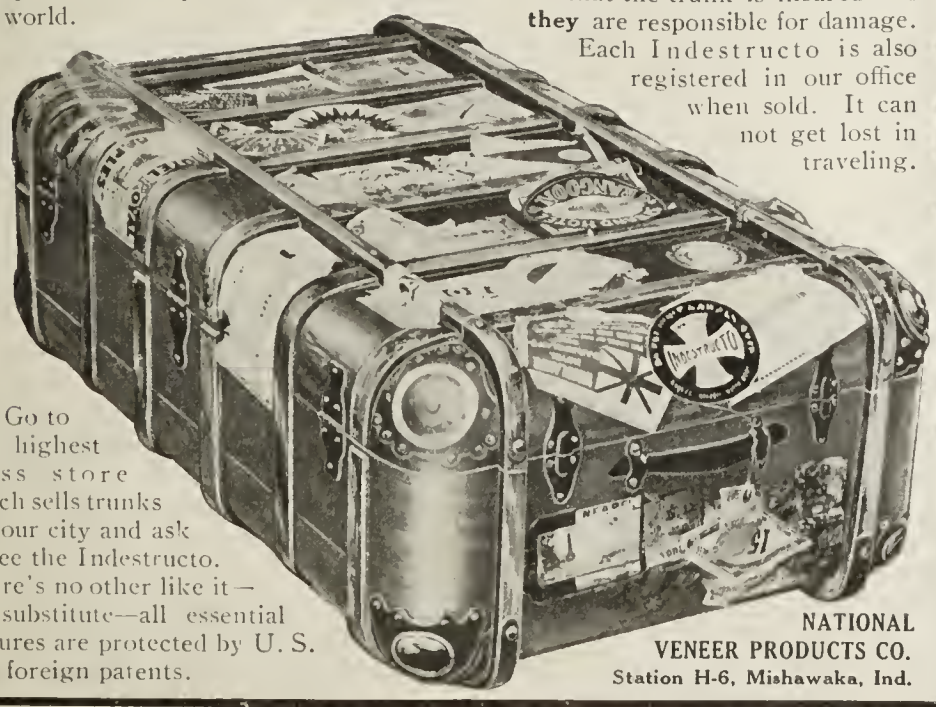
We Guarantee

that Indestructo trunks will stand more abuse—more careless handling—will travel more miles and remain longer in good serviceable condition without the annoyance and expense of frequent repairs than any other trunk on the market.

More than that, each Indestructo carries a Bond guaranteeing against destruction by Fire, Accident, Wreck, Collision, Carelessness, and Neglect.



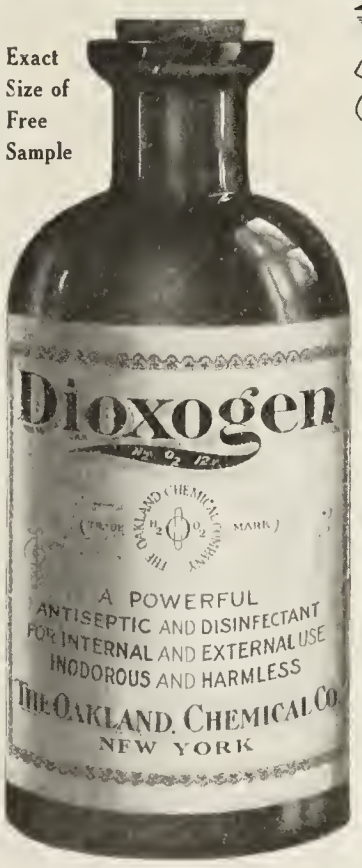
Indestructo Trunks

Indestructo Trunks are made very light in weight but are stronger, more serviceable, more enduring than ordinary trunks. The material is the toughest, most elastic, has greatest resisting qualities of any trunk material in the world.

Protected Against Loss

The Warning Label shown here appears on each end of every Indestructo. It is a notice to baggage smashers that the trunk is insured and **they** are responsible for damage. Each Indestructo is also registered in our office when sold. It can not get lost in traveling.

Go to the highest class store which sells trunks in your city and ask to see the Indestructo. There's no other like it—no substitute—all essential features are protected by U. S. and foreign patents.



NATIONAL VENEER PRODUCTS CO.
Station H-6, Mishawaka, Ind.

Do not ask for or accept just ordinary "peroxide of hydrogen" for personal use, but insist upon getting

Dioxogen

THE PURE PEROXIDE OF HYDROGEN

Exact Size of Free Sample

SEND FOR FREE SAMPLE

THERE are a hundred kinds of ordinary peroxide of hydrogen upon the market. Many of these are only suitable for bleaching and other commercial purposes; their sale for personal toilet and medicinal use is only possible because neither retailer nor consumer fully understands their character. Dioxogen, the *pure* Peroxide of Hydrogen, is made *exclusively* for personal use.

DIOXOGEN is 25% stronger than the legal (U. S. P.) standard requires, 33⅓% stronger than most, and 50% stronger than many makes of ordinary peroxide.

DIOXOGEN retains its effectiveness when diluted many times with water (the exact proportion depends upon each particular use), and is, therefore, much more economical than the weaker and less pure solutions. Some of these may cost less in the original package but are always more expensive in actual use. Although much stronger than ordinary peroxide, Dioxogen is absolutely harmless. There is no other antiseptic and germicide of equal efficiency which may be used without the slightest danger of harmful results through misapplication.

DIOXOGEN does not require acetanilid, the preservative commonly used to keep ordinary peroxide from rapidly losing its strength. Acetanilid causes the objectionable taste and odor characteristic of such preparations.

DIOXOGEN is made *exclusively for personal use:* when you buy Dioxogen—and *only* when you buy Dioxogen—are you *sure* of getting *pure* peroxide of hydrogen. There is no uncertainty about Dioxogen; it is intended for and is suitable and safe for toilet and medicinal purposes.

Make this test

Among the many home uses of Dioxogen, its use as a "mouth wash" is perhaps the most common. If you are now using ordinary peroxide of hydrogen for this purpose, send for the trial bottle of Dioxogen and make this simple comparative test. First try Dioxogen (diluted according to directions) as a "mouth wash." Note its freedom from the slightest objectionable taste. Then try the ordinary peroxide in the same way, and note the decidedly disagreeable taste caused by the acetanilid preservative.

If you have never used Dioxogen, or if you have been buying ordinary Peroxide of Hydrogen for personal use, we want to send you a 2 oz. bottle entirely without cost to you. The very best evidence of the advantages of Dioxogen is Dioxogen itself and we want you to try it at our expense. We will also send booklet describing its many uses in the home. Cut off and mail coupon or send postal to-day.

The Anderson Manufacturing Company, Dept. 16, Elyria, Ohio

the attention and give pleasure for the hour, but do not leave one better equipped for observing the history of the world as it passes across the stage. There are other moments, however, when even the most solemn reader feels the need of being carried quite outside of his intellectual mill into an atmosphere which is entirely absorbing and gives him the pleasure that an intense and personal adventure might give. The great popularity of the Sherlock Holmes stories shows how wide is the demand for this kind of compelling narrative. At its best, it is rare. "The Prisoner of Zenda" stands out among the romantic adventure novels of our day, but how many others? I can not claim to be familiar with this branch of literature, but among those which I have read, the latest novel of Mr. Justus Miles Forman seems to me to stand extremely high. "Jason" quite took me into captivity. It made me sit up too late, and read too early in the morning. It has in it not only a captivating plot, with a mysterious house in which the hero is imprisoned; a heroine who is in the most profound trouble, from which the hero is able ultimately to rescue her; a villain and a semi-villain, but it is also written with humor and cultivation, and these characters, familiar as are their main outlines in fiction and drama of adventure, nevertheless have personal existence to a degree which makes us become interested in them as individuals, not merely as parts of the exciting narrative. Certainly it would give the present writer much satisfaction if one shelf in his library could be filled with romantic fiction equally engaging, to which he might turn whenever more strenuous pursuits seem rather too severe, and when diversion seems undersupplied in a universe full of strain and hazard.

"Jason," by Justus Miles Forman. Published by Harper & Brothers. $1.50.

The Centennial of a Book

THE Hudson-Fulton celebration next month may well remind us of the great influence of Washington Irving's "Knickerbocker History." Of the actual effect of this work the author wrote forty years after the volume appeared: "I find this haphazard production of my youth is used to stamp Knickerbocker societies, Knickerbocker insurance companies, . . . Knickerbocker bread, Knickerbocker meat: . . . and I find New Yorkers of Dutch descent priding themselves upon being 'genuine Knickerbockers' . . ." This is the book's centennial. It emerged from the press just one hundred years ago the coming fall.

The title-page announces: "A History of New York, from the beginning of the world to the end of the Dutch Dynasty . . . being the only authentic history of the times that ever hath been or ever will be published. By Diedrich Knickerbocker." The chronicler confesses that he sees no harm in helping out the facts, wherever they fall short. He discusses the origin of the Indians, proving that since they have not been shown to come from somewhere, they probably did not come at all. He describes the numerous benefits which the Indian gained from the white man, including the blessing of medicine, after first receiving the requisite diseases.

The voyage of the *Half Moon*, in which Commodore Hudson sailed from Holland under the direction of their High Mightinesses, the Lord States-General, he recounts with more assurance than other historians have displayed, for Diedrich's own great-grandfather shipped as a cabin boy. Through him alone we learn how the first colonists acquired their land by addressing the Indians on shore through a speaking-trumpet. The redmen, at the horrible sound of the Low Dutch, took to their heels and expired with fright. Manhattan was settled according to the specifications of a dream which visited Oloffe Van Kortlandt. The honorable antiquity of a jest, usually applied to Boston, may be discovered here. The cows "in a fit of laudable patriotism . . . established paths through the brush, upon each side of which the good folk built their houses."

Although the record does not extend beyond the Dutch rule, yet throughout the book there is a distinct connection with that other period which occupies present attention—the time of Fulton, for the volume was published but two years after the triumph of the *Clermont*, and we look back upon Manhattan's infancy from the eminence of 1809. Irving imagined Oloffe the Dreamer, that primitive burgher, to be gazing in wonder upon his own age, seeing "palaces, domes, and lofty spires," while for us to-day there is, on the contrary, a glory that is rather pathetic in the little city of 1809—closer, in all but centuries, to Dutch New Amsterdam than to American New York.

COLGATE'S RIBBON DENTAL CREAM

An Amusing Incident

(Told by a Dentist)

"COLGATE & CO.

Dear Sirs: Thank you for calling my attention to your Dental Cream. Preventative dentistry for children is my special work, and I am delighted to know of such a delicious dentifrice for young people. One little boy ate the contents of the tube which I asked his mother to get for him, remarking to me the next day:

'Say, Doctor, I wish that tube had been three feet long.'"

Signed by a former President of a State Dental Association.
(Name on application.)

Isn't that like a Boy!

There is actually—in each tube

15 Feet of Cream

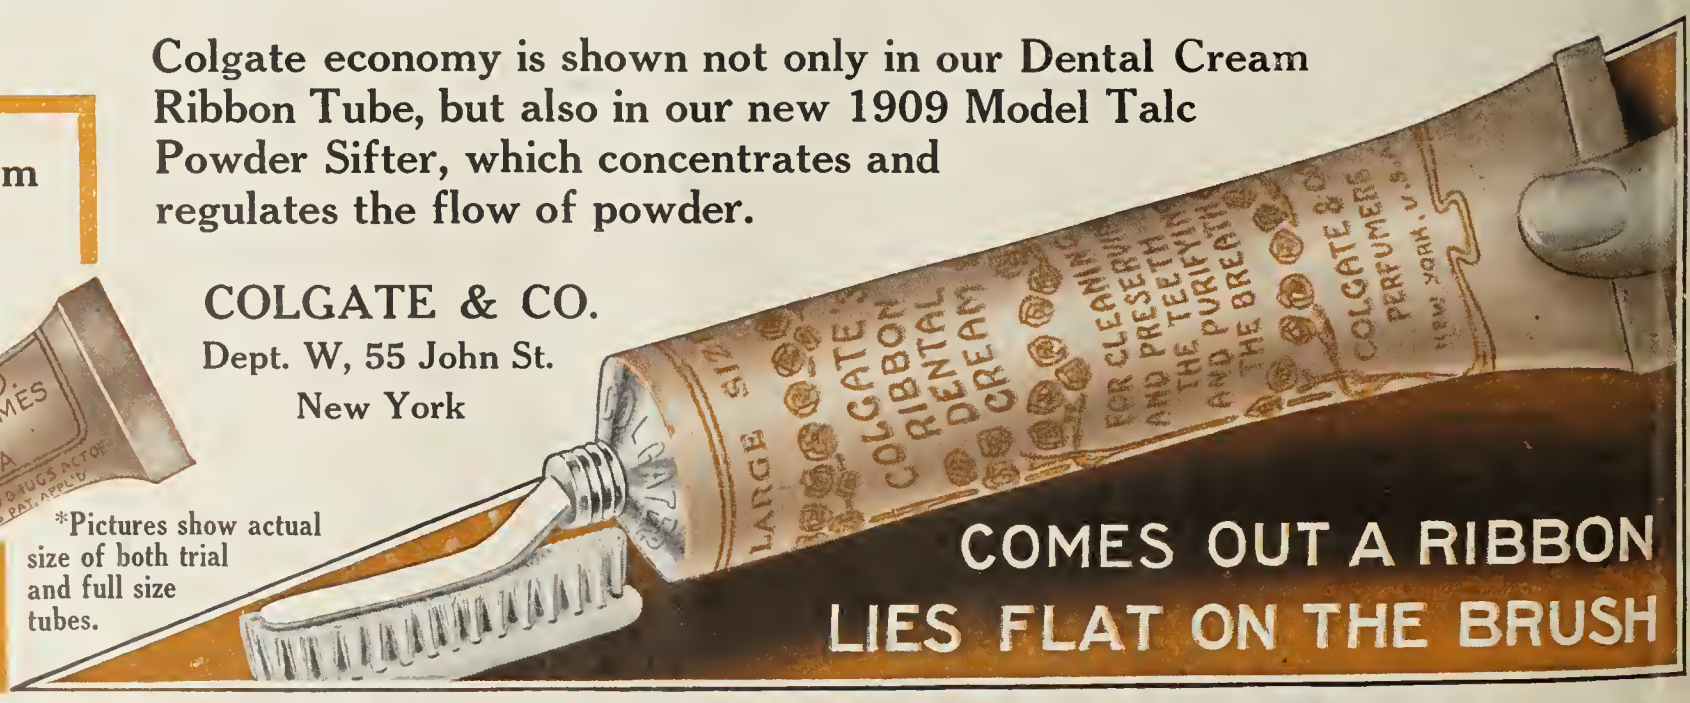
If he had used it properly—(one inch twice daily)—it would have lasted 3 months.

Delicious and antiseptic, the dentifrice that combines efficiency with a delightful after-taste. Your mouth does not need to have a medicinal taste, and it won't if you use Colgate's.

Economical 1 More Cream—almost half as much again as in the average tube. 2 Less used—half as much cream comes out of our flat opening as from usual round-mouth tube. 3 No waste—our flat ribbon of cream cannot roll off the brush.

Antiseptic It gives a pearly lustre to the teeth and a perfect polish to gold work. Destroys decay-germs, stimulates gum tissue and prevents tartar.

42 inches of Cream Sent for 4 cents



Send 4c for this trial tube. If 1 inch is used twice daily it lasts three weeks.

*Pictures show actual size of both trial and full size tubes.

Colgate economy is shown not only in our Dental Cream Ribbon Tube, but also in our new 1909 Model Talc Powder Sifter, which concentrates and regulates the flow of powder.

$500 in Cash Prizes

to the School Children *of* America

EDUCATOR Week begins Labor Day. This cash prize offer is part of our EDUCATOR Week campaign. We want every child in America up to 14 years of age to write a composition on

"Why I Like to Wear EDUCATOR Shoes"

In order to enter this contest all that is necessary is to have the child get a copy of "The Prize Offer." Ask your Shoe dealer for a copy of this. If he cannot supply you write to us and we will send a copy at once.

Parents will all enter into the spirit of this contest because it means no end of fun for your children. It means a chance for a prize and, therefore, a chance to start a bank account. Also, it means that your children will have stamped on their minds the value of wearing sensible shoes all their lives. If you have had foot trouble you will appreciate what this means. Think what it will mean to your boy or girl to figure out in his or her own mind the reasons why they like to wear these sensible shoes.

You Owe It to Your Child to arouse his interest in this contest and to encourage him to try for these prizes. Wouldn't you have liked this chance when you were a child? What fun they will have just writing the composition! How full of joy they will be if they succeed in winning a prize.

EDUCATOR Week Prize Offer. Total $500.00

$50.00	in gold for first prize	$10.00	in gold for 5th prize
25.00	" " " 2nd "	5.00	" " " 6th to 10th prizes
20.00	" " " 3rd "	2.50	" cash " 11th to 30th "
15.00	" " " 4th "	1.00	" " " 30th to 335th "

All compositions must be in our hands on or before October 15th.
Prizes will be awarded December 1st, '09.

GET THE PRIZE OFFER TODAY!

10-12 HIGH STREET BOSTON MASS.

What Educator Week Is

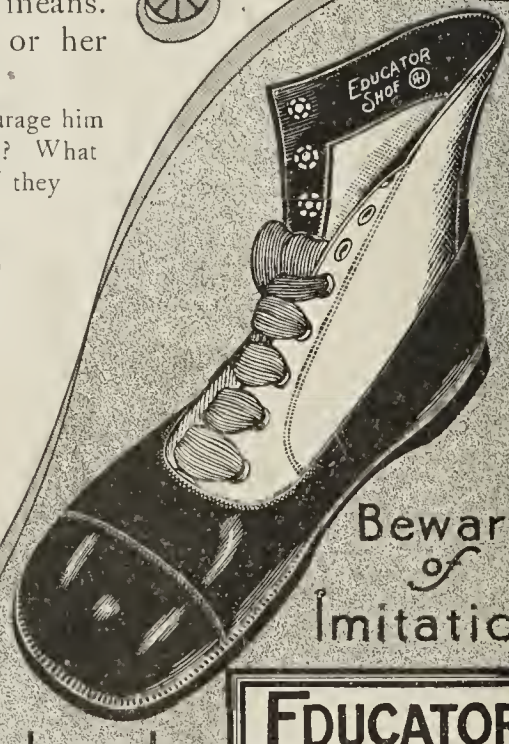
EDUCATOR WEEK—Sept. 6th to Sept. 11th. This week is selected because schools begin the fall term about this time. School children everywhere must then have a pair of new shoes.

Retailers selling the Educator Shoe will make a special display of the Educator for children during Educator Week. Watch the windows in your town then and you will know at once who sells Educators.

The Educator Shoe

EDUCATOR SHOES are made for every member of the family—infants to parents. Prices according to size. They are made—

For the CHILD whose feet will grow right if given a chance.
For the BOY—the lively and healthy kind who needs foot-freedom.
For the MISSES and YOUTH whose feet are reaching the matured shape.
For MEN and WOMEN who seek real, true foot-comfort.



SIZES:
First Steps, 2 to 6, $1.25 and $1.35
Infants', 5 to 8, $1.50 and $1.75
Child's, 8½ to 11, $1.75 and $2.00
Misses', 11½ to 2, $2.25
Girls', 2½ to 6, $2.50 and $2.75
Women's, 2½ to 7, $4.00 Oxfords, $3.50
Boys', 1 to 5½, $2.50 and $2.75
Men's, 6 to 11, $3, $4 and $5
25c Extra when ordered by mail

FRANKLIN 1910 AUTOMOBILES

Franklin automobiles are built in three chassis sizes, four and six cylinder, with sixteen different body styles embracing touring, runabout, surrey and close-coupled bodies, limousines, landaulets, town cars and taxicabs.

The easy movement of full-elliptic springs as used on a Franklin automobile is not tiresome because vibrations are not transmitted to your nerve system, and there is no jolting and jarring. Vibrations from road shocks are completely taken up by the springs and our laminated-wood chassis frame.

Even if you use shock absorbers on a steel-frame semi-elliptic-spring automobile and tie it down to keep it from bouncing you do not eliminate vibration. The force of every road shock must go somewhere and when not taken up by the springs and chassis frame the passengers feel the effect. It is the vibrations transmitted to the nerve system that produce fatigue or dull headache and in some instances physical disablement.

Full-elliptic springs have double the elasticity and shock-absorbing ability of semi-elliptic springs. The steel frame also transmits vibrations whereas the Franklin frame absorbs them.

The easy riding and flexibility of the Franklin explains why it makes the best touring time and does it with such comfort and pleasure. In the Franklin you always drive smoothly and consistently. You are not hindered by hills and rough roads.

Very likely you think your automobile rides as easily as can be expected but when you ride in a Franklin you learn the difference.

And an easy riding automobile means long life to the vehicle and power plant. There is no racking and straining.

Franklin 1910 automobiles will average 2500 miles without tire puncture. The tires are extra large for the service required so that punctures, ruptures and other troubles are not likely to occur. It is not necessary to carry extra tires. Heavy water-cooled automobiles carry from 30 to 50 per cent more weight on tires the size of ours.

Large tires on a light-weight automobile are a reasonable, sensible proposition. They are durable, economical and efficient. It is the practical solution of tire trouble. The fact that they give so much better service proves their economy.

Franklin air-cooling has always been successful, but the improvements for 1910 are so pronounced and make the cooling so simple and positive that its perfect success is evident to all who investigate it.

The main difference over our former cooling method is the employment of air jackets and vertical cylinder flanges to direct the air currents and the elimination of the front fan and all moving parts not absolutely necessary to a gas engine.

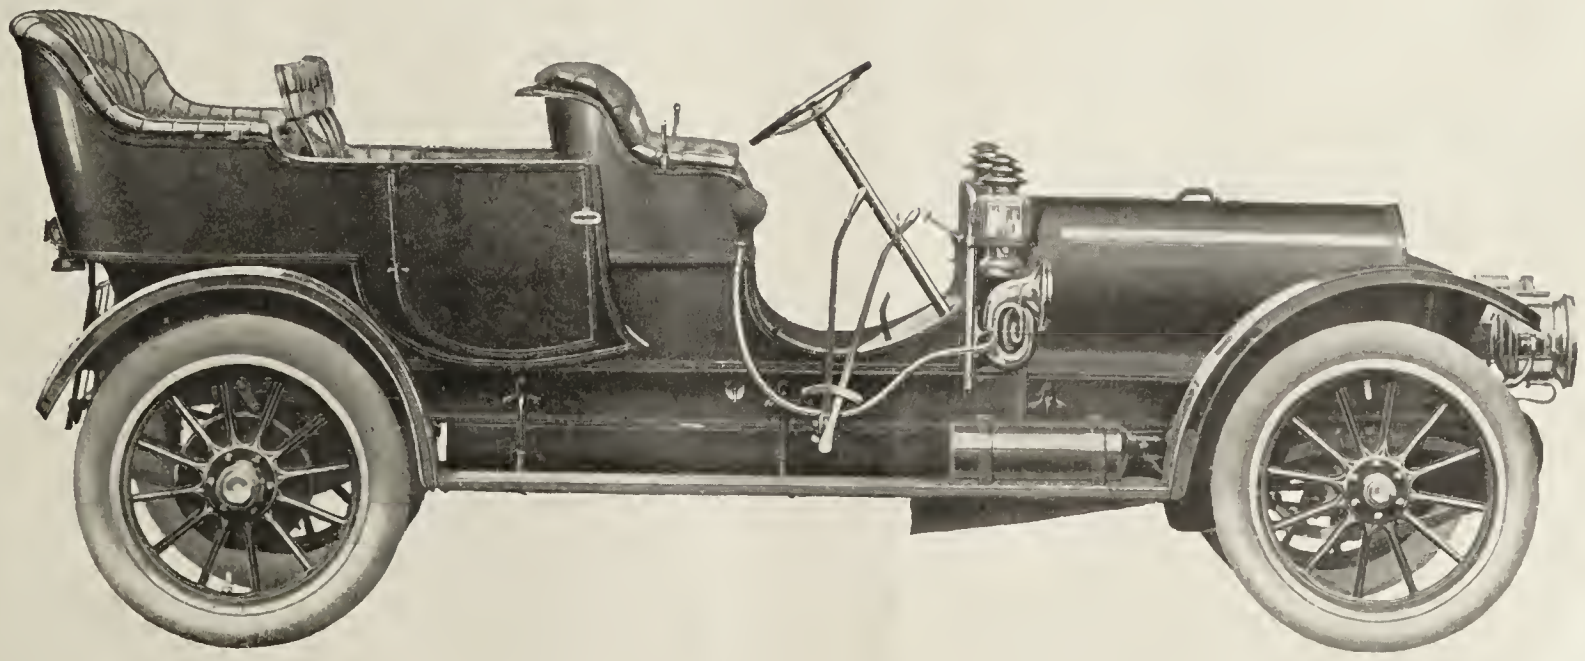
It is necessary of course to have a fly-wheel upon any engine. After four years experimenting we have perfected a fly-wheel which has incorporated in it a pure tangential fan of new type—the most efficient air moving device known.

The air jackets direct the air, moved by the fly-wheel, downward over the valves and the tops of the cylinders and then down around the cylinders. Each cylinder gets its own cool air and is also insulated from absorbing the heat radiated from any other cylinder. Thus all the cylinders are cooled equally and perfectly and the hottest and most important part of each cylinder, the top, is cooled the most.

No means have ever been discovered for cooling an engine without using air. The water-cooled engine is cooled by air but in an indirect and complicated manner. Instead of taking up the heat from the cylinders directly by air, water is passed around the cylinders to take up the heat and then the water is sent through a radiator and heat from the water is taken up by the air. In other words water cools the engine and air cools the water.

Franklin air-cooling not only gets rid of complication and freezing and leaking troubles, but it allows the whole automobile to be lighter, more efficient and easier and cheaper to maintain.

The Franklin control is also the limit of simplicity. Ignition is by our Bosch magneto high tension system, which does not require the spark advance lever, batteries or any of the extra complications of the "double" system. To fully realize the advantage of the Franklin control you need to use it.



This is our second season with the magneto single ignition system. Coils and batteries seem old-fashioned to Franklin owners.

All Franklins are powerful, comfortable and quiet. They are not bulky nor heavy—they are just the right size for their passenger capacity. Strength is obtained by proper materials and proper design, not by mere bulk and weight.

The best way to understand our claims for easy riding, comfort and silence is to have a ride in other automobiles over ordinary roads, then go in a Franklin over the same roads.

Delivery of 1910 Franklins, which began in June, is made on a fixed schedule of delivery dates. This enables the purchaser to arrange with the dealer for delivery at a definite time. But as each dealer has only a limited number of deliveries each month, and as our output is already allotted, you can readily see that delivery arrangements must be made in advance.

ADVERTISING BULLETIN

NO. 19

THE TIME ELEMENT IN ADVERTISING

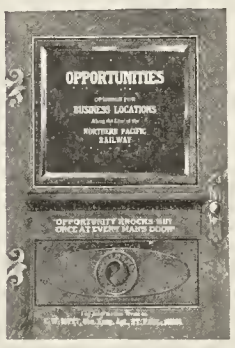
LOOKING back through the magazines of a generation ago I find some things that would surprise you. For instance, as far back as the middle sixties, when the war was just over and the country was getting its breath, such standard American products as Sapolio, Waltham and Elgin watches, Steinway Pianos, Yale Locks and Tiffany Jewelry were being regularly and consistently advertised.

A few years later Sozodont had come into the magazine field, along with Royal Baking Powder, Baker's Chocolate, and Knabe Pianos; and from year to year the goodly company grew, till it included such household words as Pears' Soap, Colgate's preparations, Ivory Soap, Columbia Bicycles, Williams' Shaving Soap, Huyler's Candies, Lyon's Tooth Powder, Pearline, and Quaker Oats—and the list could be extended into hundreds.

Their growth has been as the growth of a great oak: sure, steady, enduring; their rain has been the sweat of men who worked hard and thought hard to win their success; their sun has been the sun of publicity. And because neither this rain nor this sun has ever been spared, they have kept on growing.

That is what I mean by the "time element" in advertising. Keeping everlastingly at it, year in and year out, brings more than success—it makes a business as permanent as steel beams. The true art of advertising is to secure this priceless increment of time; to establish by long and favorable association that thing that people call "Reputation."

And because this Reputation depends absolutely upon a certain unvarying standard of quality it is a positive fact that we get better values for our money in articles which are steadily advertised than in those which are not.



Advertising creates standards. Continued advertising guarantees that they will be lived up to.

T. L. Patterson

A Predicament

NONE SO STRENUOUS as the more saffron daily guardians of the human race in New York, last winter, in demanding that Governor HUGHES put an end to gambling in the Stock Exchange. The Governor expressed some skepticism about the possibility of eliminating gambling altogether without striking a blow at business, as Germany, to her cost, did in 1892, but he appointed an able body of men to investigate and report. When they did report during the summer they distinctly urged, as one of the best possible preventive measures, that the penal code be applied not only to obviously fraudulent advertisements, but also to the newspapers accepting the advertisements. They recommended a law making it a misdemeanor for a newspaper to accept an advertisement containing statements about the value of stocks, bonds, or similar securities, without taking precautions, as duly set forth by the Commission, to test the good faith of the advertisement. We recall this advice of the Hughes Commission at the present moment, because such a bill will doubtless be introduced at the next session of the New York Legislature, and we are inclined to think it is about time for the yellow newspapers to begin to agitate public opinion in favor of its enactment. The situation is one of the most agreeably comic now upon the stage. Messrs. HEARST, BRISBANE, and PULITZER have competed fiercely for priority in protecting the poor fooled investor, the shorn lamb, and the level-headed Governor of New York has escaped one more of the many traps almost daily set for him. To have these gentlemen fall into the very pit they digged accords with poetic justice and other elements of established drama, from ARISTOTLE down. Once in a long time when papers howl for reform, they obtain it, plentiful and surprising. Meantime, as the public awaits the decision of the Legislature on this newspaper cooperation with investment sharks, the drama is not allowed to lag, for the Metal Exchange has already introduced reforms in the method of making copper quotations, in line with the committee's suggestions, and the Mercantile Exchange has voted to abolish "official quotations," severely condemned by the committee. The Governor treads patiently his route of cool-headed progress, avoiding demagogy on the one side and timidity on the other.

What Is a Demagogue?

DEFINE IT, READER, if you like. Can the Honorable JOSEPH WELDON BAILEY, in sober truth, have attacked the present inhabitants of New England as men whose ancestors burned witches? Two objections occur to such an argument. First, Mr. BAILEY'S brains would appear sufficient to discover something of greater relevancy. If witches had been burned, where have cruelty and ignorance not been practised in bygone times; and where is the usefulness to-day in the United States of seeking personal power through setting one part of our common country against another? Remains objection number two. Witches, as it happens, never were burned in New England; and Mr. BAILEY, having at least some smattering of American education, might be presumed to know they never were.

Change of Occupation

NO WONDER MONSIEUR CLEMENCEAU has offers from so many Paris journals. Did not Mr. ROOSEVELT receive a welcome from the real governors of our country when he laid down the baton of imaginary power? M. CLEMENCEAU spent much of his life in writing for the newspapers, and finally consented to demonstrate in practise the way in which a journalist would run a government. That he got along with steadiness and brilliancy few have denied, even since a tempest of rage brought about his unexpected fall. If now he resumes the pen, he will be free from the checks that have forced him to choose among those phrases and positions which please him best. He can now boil when he is inclined, throw bricks at his opponents to his own exceeding joy, fiercely assail, when he wishes, those who have taken up the burden which so long was his. Doubtless more openly, or less, he will soon be back again in journalism. Welcome, brother! Let us proceed together in the government of this world.

Necessity

WE SPEND YEARS of time, infinity of attention, thousands of the people's money, turning the trial of a wealthy murderer into a complicated game. England last year settled a somewhat similar case in just one day. This year she took a small part of a single day on the trial and sentencing of MADAR LAL DHINAGRI; she did it three weeks after the murder; a few weeks more saw the Hindu pass from earth, and nobody pretends the result would or should have been different if England had tied herself up with as many fool technicalities as afflict criminal law in the United States. It is a sad thing for the state to kill any human being; it is sadder to kill one whose act seems virtuous to himself; but as long as such necessity exists in an imperfect universe, it should be met with certainty, gravity, and promptness. The courts should deal seriously with the evidence, not preside at a spectacular combat between legal gladiators and mercenary "experts," with the upper courts looking on, ready to upset an unmistakably just conviction if some clerk omits the word "the" in an indictment or if some judge goes astray on one of the numberless immaterial "instructions" called for by lawyers for the sole purpose of upsetting a verdict by technical sleight-of-hand. Mr. TAFT has led the public to expect some reform of the barbaric procedure which United States courts and lawyers have constructed, and we look forward to the day when our judges and juries shall, like the English, deal only with the fundamental law and with the evidence.

China

AMERICANS ARE TO LEND MONEY to the Chinese Government, not, however, because the Celestial Empire desires to borrow! Her loan for railroad building is increased beyond her needs as a favor to the would-be lenders. Absurd as this performance superficially appears, in this practical and complex world our State Department acted justly. It takes the Chinese situation as it is, and only a narrow view of human psychology lays emphasis entirely on the trade advantages which result from diplomatic intimacy. Commercial relations imply intellectual and moral relations of every kind, and that our increasing influence in Asia will be used generously for China's welfare is not an unreasonable hope or boast. Since railroads, steamboats, and telegraphs were born, no part of the world can work out its destiny alone. Mr. CRANE accepted the post of minister to China because he was in hearty accord with the famous Shanghai speech, in which Mr. TAFT struck the keynote of his Eastern views. Those who will for the present determine our Oriental policies are men of experience and of the measured judgment which springs from training in the school of facts. They are at the same time men of broad outlook, high principle, and fairness to foreign countries. It should be a source of pride to Americans that Mr. TAFT stood by the Philippines always and finally helped to win a genuine tariff victory in their behalf. When the story of our influence in China is complete, it also will prove that one country may act helpfully and with enlightenment toward another.

Slave of Circumstance

TO CRETE, as to China, it is forbidden to be the mistress of her fate, the captain of her own soul. Before she has fought for her ideals and been in part defeated by sheer numbers. When she sees the Young Turk eager to prove his efficiency and power at her expense, she is ready again to defy the heavier battalions, when in steps Europe and stops the fight. The consoling aspect of such interference is that Europe gives to Crete the substance and to Turkey the shadow. She does no more than save Turkey's face, and Crete she protects from a Power which, in an isolated contest, would surely overwhelm her. Moreover, few events yet unborn can be predicted as safely as the ultimate joining of Crete to the country toward which she is called by religion, language, customs, sympathy. Because of the entanglements of Europe she is compelled to wait, but, although thus at present slave to circumstance, every year makes it more nearly impossible that she should ultimately be the thrall of a barbaric and essentially Oriental Power.

Two Diplomacies

GERMANY'S SUCCESS in Persia is but an illustration of her effective diplomacy for a decade or more. From the Baltic Sea to the Persian Gulf a straight road now is hers. Although she has been at work in Persia only some four years, her influence has already about overtaken that of Russia or Great Britain, who have contended so long for that strategic point. Germany seems in her foreign work to command the services of first-class men. Russia, on the contrary, has struck a dearth of diplomatic talent. When a second-class man, after the war was sent to represent her at Tokyo, a howl arose, for the Russian press

is not gagged where the Foreign Office is concerned. Some of the few respectable diplomatists have been kept in office late in life and against their will from inability to fill their places. Many of the more successful are not Russians. ROSEN was from the Baltic provinces, CASSINI an Italian from Trieste. WITTE'S diplomacy at Portsmouth was triumphant only to the vast and innocent public, and WITTE again, on his conspicuous errand to Germany, was probably made the tool of her astute officials. They told him amiably that Germany would put no obstacle to Russia's advance toward the Pacific. No wonder, as it removed pressure from their own Eastern boundary. Russia, often looked upon as incredibly complex, has been surprisingly simple-minded. She has thoroughly learned some lessons, also, which limit her ambitions. She does not wish to absorb any more thickly populated regions. The Poles and Jews have shown her the pains of indigestion. Indeed, she opposed the partition of Poland, and took her share only when Germany threatened otherwise to take it all, and since the partition she has proposed to Germany that Poland be reconstructed. Her diplomacy is not brilliant, but the objects of her ambition now have in them nothing to alarm.

The Dutch in America

THE HUDSON CENTENNIAL will freshen our memories of a race that has always remained sound and that once was great. Spain and France lost world-empires through fault of theirs. Holland, like Portugal, fell because she was too small. At her height she showed a talent for exploration and settlement matched but two or three times in history. She taught the world much of what it knows about trade, banking, art, scholarship, toleration, and civil government. To the United States she gave her best in many lines. Nearly all the military leaders of the Colonies were trained in Holland. Also she instructed on her own soil men who have counted otherwise for much in our history, as Sir WALTER RALEIGH, Captain JOHN SMITH, MILES STANDISH, Governor DUDLEY, and innumerable others. WILLIAM PENN was in close touch with the native country of his mother, who was born in Rotterdam, and he put many Dutch ideas into the constitution of Pennsylvania. Our flag took its form and colors from the Dutch, which is no wonder, since the best model for our revolution was that other revolt, headed by the man who reminded PHILIP of Spain what DEMOSTHENES had said, "the strongest bulwark of a free people is distrust," a sentence which describes the very heart of Colonial ideas of government and freedom. "The originals of the two republics," wrote JOHN ADAMS, "are so much alike that the history of the one seems but a transcript of that of the other." Partly by treachery, Holland was driven from America, but her history in relation to us was glorious in itself and strengthening and enlightening to our character.

Squirrels

TO THE NATIONAL GOVERNMENT rather than to the States should belong the control of epidemics. Both party platforms provided for a national department of health; were these planks meant only to stand upon? This year the squirrels in parts of California have been a veritable nuisance, destroying thousands of pounds of nuts and fruits. Among these squirrels instances of bubonic plague have been found, and in the Alameda County Infirmary there have been two human cases, in one of which at least the man had been shooting squirrels. The Federal authorities are shooting and trapping, but a small force can obtain only enough for experimental purposes. The local authorities are doing little. What can cities and suburban towns do, if the country, full of squirrels, extending up and down the coast, should become infected? It is properly a Federal question, and should mean an extensive squirrel army and wholesale poisoning. It is a bigger question than it was before, when it was centered in certain cities. The cities can purge themselves, but it is harder in the country. By transportation of rats and squirrels there naturally will be a gradual spread. Possibly there must be an epidemic before the people generally will be interested.

Hugo

THE FRENCH PEOPLE will give a week to celebrating one of their poets, beginning on September 26. In the spring of 1616 the greatest Englishman of all time passed away with no homage, and SWINBURNE, recalling SHAKESPEARE at the death of HUGO, remarks that the greatest of all Frenchmen has passed away," which is putting it rather strong, although HUGO assuredly would have agreed with SWINBURNE. He saw himself only in terms of SHAKESPEARE, NAPOLEON, destiny, nations, and ideas as large. "The Art of Being a Grandfather" seemed to SWINBURNE "the most absolutely and adorably beautiful book ever written"! There have been Frenchmen to speak almost as wildly, but far fewer now than once there were. HUGO was an impressive figure. He excelled in many lines. In the drama he was a successful rebel. His preface to "Cromwell" was an epoch-marking manifesto. His lyric quality was exquisite and brilliant. He was a romantic novelist of profuse imagination and epic sympathy. What counted as much as any of these things in the stir he made was his powerful polemic career—the onslaughts he made, in prose and verse, against the evil giants of his day. Not to go outside of literature or of France, we scarcely think the final verdict will find in him enough that is supremely excellent to permit him to stand as high as MOLIÈRE, MONTAIGNE, or RABELAIS, possibly not even as high as that contemporary, pioneer in fiction, painter of the "Human Comedy," who said of him: "VICTOR HUGO? Why, he is an entire universe; let us talk of him no more."

No Title

MOST MEN, says ARSÈNE HOUSSAYE, are philosophers, and most women actresses; only in universities and on the stage they are scarce. Has every Aspasia her Socrates and her Pericles? No, but perhaps the converse is almost exact. Perhaps every Abelard has his Héloise, every Musset his Rachel. VOLTAIRE and Mlle. DE BERRY died on the same day. To the philosopher was refused a churchyard grave; the actress was interred with pomp in Saint-Germain-des-Prés; yet they had been good friends, instructive to each other. It is not always so. Sometimes the partnership of man and woman means mischief, as in the case of POMPADOUR, but this is oftener found in society and politics than in art. In art, especially, but on the whole in all work, they lend each other power. Gain and disadvantage can be found mingled in every condition, and we can only discover what in the main, not always, is the truth. The general fact in the relation of woman and man is told in a fable which is old, but which, nevertheless, some may not have met. Man once was so strong that the gods became jealous. They feared for their supremacy. Combining, therefore, they broke him into two, to weaken him, that his power should be no longer menacing. The fragments, man and woman, have been wandering about in search one of the other, seeking strength in union, ever since.

Think It Over

HERE IS A STORY that will be of interest to the humanitarian. We are inclined to think it contains a considerable amount of truth:

"I was discharged from San Quentin six weeks ago. I was given a new suit of clothes (that was branded 'prison' all over, but no matter about this). I was given clothes to cover me, $5 in cash, and the good wishes of the warden and the man who drives the van. Very good, you say, for an ex-convict? Well, listen to this. On the day I was given my freedom, my picture, with my description, was sent to every sheriff of every county in the State: 'This man is free—may be coming your way. Look out for him.' Now, there is nothing dangerous about me, or, at least, there never was. I was a street-car conductor, a decent enough sort, when one night I got drunk and hit a man. Unfortunately for both of us, it nearly killed him. I got four years. I paid the penalty. Should I be let alone now or not? I gave more than four years out of my life to the State. I lost my health. For that reason I thought that, being 'free,' I would go out into the country and work there until I got my strength back. From county to county I have been told to 'move on.' The first man to whom I applied for work gave it to me; then I took my honorable discharge out of my pocket and showed it to him. He picked up a cane that lay across his desk and yelled at me: 'You get out of here or I'll knock your brains out.'"

It is needless to draw any facile moral from this condition. The facts are intricate. The difficulties are many. A bitter situation faces the prisoner who wishes to lead an honorable life after his discharge. A delicate situation faces the man who would employ him. The employer knows the rule; it requires some sacrifice to principle and humanity on his part to test the particular case in order to avoid helping to crush a man who may be one of the exceptions. Sentimentalism in the treatment of crime is not to be encouraged, but injustice is still worse.

Something in Collier's

THERE HAS BEEN SOME TALK about the immorality of COLLIER'S in publishing an advertisement of a certain scheme, because Mr. LEWIS, who conceived it, has been attacked by the Government in the past. This sort of vagueness is rather cruel. The prosecution as a fact ended in Mr. LEWIS'S exoneration. Behind his present enterprise are some of the best men in Missouri. Our own investigation has resulted favorably. Mr. SULLIVAN will be in Missouri soon, and anybody who is discontented is at liberty to write specific complaints to which he will give full attention. Meantime, all may rest assured that we condemn nobody merely because somebody else has done so, but are guided by the best researches we ourselves can make.

Mr. SULLIVAN, by the way, is not to end his trip in Missouri. He goes thence to the South, in search of recreation, topics, information. Any Southerner who wishes to send in any advice before he starts will receive our interest and attention.

An Engineer

HOW CAN MAN DIE BETTER than the locomotive engineer in that Virginia wreck? Tennessee has reason to be proud of him. Although he was in bitter pain, scalded, hurt to death, he begged those who came to his assistance to let him alone and help the passengers. No passenger, however, needed aid, and the would-be rescuers offered whisky. The injured man refused, until four men had smelled his breath, to bear witness that he had not been drinking when the wreck occurred. "All an engineer has is his record," he said, "and he can not afford to have anything against that." Then he died. It is sad to die, to leave wife and children, friends, work, and this bright world, but it is well to go, when the call sounds, in the spirit of the engineer SAMUEL BUSH.

The Military Maneuvers in Eastern Massachusetts

The upper picture shows the kind of roads the soldiers had to struggle over during a two days' downpour of rain; the lower photograph depicts a scene at the battle of Hanover Four Corners. In the center is Major-General Leonard Wood receiving reports from the umpires; at the left, Brigadier-General Pew, Commander of the Blue Army; at the right, Brigadier-General Bliss, U. S. A., Commander of the Red Army, in conversation with Mr. Davis, Collier's correspondent

The Last Stand of the Blues—A two-hour battle, the fiercest of the campaign, at Hanover Four Corners, on August 19, in which infantry, cavalry, and field artillery were all engaged, resulted in terminating the week's invasion of Massachusetts. The defenders were here outflanked and defeated by the Reds

The Capture of Boston

The Most Important War Game Ever Attempted in America, and How Its Fortunes Were Determined by Military Umpires

By RICHARD HARDING DAVIS

THE morning after the war maneuvers ended, at the top of its editorial column the Boston "Herald" stated that there was less anxiety over the result of the war game than over the outcome of "the real game" between the Boston and New York baseball teams. Defeat of the Boston troops, it continued, "was as nothing" as compared with the misfortune that, on the same day, befell the "Red Sox" at the hands of the "Yanks."

This spirit, so frankly expressed by the leading newspaper of New England, is the most stubborn opponent the volunteer soldier is called upon to fight. It is his real enemy. As he has shown us, he can invade an unknown territory and can handle an invading army. But he can not overcome the enemies of his own fireside. To the man in the street, the war maneuvers are a joke. Except as offering a butt for his humor, they do not interest him. He does not care, and he doesn't know. And he doesn't know that he doesn't know. Those who followed the maneuvers, but who, instead of sleeping in a wet road sheltered from a northeaster by a stone wall, returned each night to a comfortable bed, felt a genuine admiration for the men of the Red and the Blue armies and for the work they accomplished. But we found, to the man who read of them in the papers, that not only were they ridiculous, but that what they were attempting was ridiculous and a waste of energy and money. The man at home roared with delight at the absurd idea that by pasting up a label you could destroy a bridge, and that an umpire should declare a troop of cavalry shot to pieces when no bullets had touched it made him writhe with laughter. Should the same man pay to see a comic opera, and find it had never been rehearsed, he would besiege the box-office and demand the return of his money. If every spring his pet baseball nine did not go South to practise during two months for the big game later on, he would be indignant. If on the morning of the big game his team put on their uniforms for the first time, and for the first time assembled as an organization, he would cry out that he had been robbed.

Serious Not Absurd

BEFORE the football season opens he will watch the members of the squad hurl themselves at a stuffed figure, swinging past them on a trolley. And the spectacle in no way strikes him as absurd. He does not cry out: "But that is not a real man!" For the football player he can readily see the advantage of practise, of hard discipline, of team-work, of exercises that will bring him to physical fitness. But when the regular army and the militiamen practise and rehearse for a possible war, which, even in England they are beginning to suspect is a more serious exercise than cricket or football, he calls it a "spit-ball" war, and let's it go at that. If he protested against the old "field day" in a summary camp, when the militia performed the same evolutions they had practised under the roof of the armory, when sweethearts and wives overflowed the company streets, when the Governor in a silk hat reviewed the troops and the band played, his protest would be reasonable. But the week in camp, with such other enormities as black powder, cross-belts, and muzzle-loading guns, has passed, or is passing, and in place of it are the maneuvers under war conditions. And the man who laughs at these maneuvers shows not so much a sense of humor as a vacant mind.

The Reds taking shelter from the fire of the Blues behind a house at Hanson—the defenders are drawn up back of the fence, from which they are checking the advance of the invaders with repeated volleys

A Diagram of the Campaign

The Red forces are indicated by the dark rectangles, and the Blues by the light. The position of the two armies on each successive day is demonstrated by the number printed next to each division. The diagram shows how the Red troops landed on the southern coast and drew the Blues down to meet them; whereupon they skirted past the Blue line

The maneuvers held the other week in Massachusetts were the most successful that have ever been pulled off in this country. Their success was due to several causes. In the first place, Major-General Leonard Wood, who planned them, is a soldier of experience in actual warfare, of executive ability, of intelligence, and possesses the saving grace of imagination. His imagining was shown in entrusting the defense of Massachusetts to the same men upon whom in time of war the safety of that commonwealth will depend, and in assigning to actual strangers to Massachusetts the part of the invaders. By this he gained two good results, the militia of the State in one week learned more concerning it than they had guessed in a lifetime, and the invaders were taught the inestimable value of a map, of scouting and reconnaissance, and how it is possible for men to live on the country through which they are fighting their way. Until two weeks ago in the United States the largest area of ground covered in maneuvers was twenty square miles, a distance that might be overcome in a day's march. In these late maneuvers the area covered was two thousand square miles. Over this territory, as unknown to the invading army of militiamen from New York, Connecticut, New Jersey, and the District of Columbia as would be Canada, Mexico, or Cuba, nine thousand men, under Major-General Tasker H. Bliss of the regular army, were ordered to find the road to Boston and take that city. Seven thousand men, natives of the State, under Brigadier-General William A. Pew, Jr., blocked their progress.

The Staff of Umpires

ACCOMPANYING each General were officers of the General Staff of the regular army. Both General Bliss and General Pew had the benefit of their advice, but the actual work in the field was, with the exception of the Tenth Cavalry, performed by militiamen. To decide between the two contestants was a staff of umpires, with General Wood as Chief Umpire, selected from officers of the regular army, experienced in real warfare, and recent graduates of the War College. So far as it was possible, each separate body of troops of each army was accompanied by an umpire. It was his duty to see that the rules of the war game were followed, and when there was a fight to decide which side had obtained the advantage. As an umpire he could not suggest to a commanding officer what he should do, but he could tell both sides what they must not do. For instance, at Halifax, a troop of the Tenth Cavalry dismounted across an open field. Under cover of a stone wall, a part of

troop gained the protection of a barn and farmhouse. As these had reached cover unseen by the enemy, the umpire allowed them to hold their position. The other men, who had exposed themselves to the fire of two companies of infantry, were sent back into the woods from which they had advanced, and a certain number of them as "dead" were ordered out of the fighting. According to the rules, a man who was declared "dead," or who had been made a prisoner, could not for the remainder of the day take part in any action. But, that he might benefit by the lessons to be learned in the campaign, on the next day he was allowed to fight again.

The Method of Reaching Decisions

A RECORD of the killed and wounded on each side was carefully kept, and, in summing up the men engaged in a fight, those already killed and wounded were subtracted from the number of those actually present. Even though in a skirmish one side greatly outnumbered the other, it might happen that in the larger force there were already so many "dead and wounded" that the smaller force was in reality the stronger, and, in consequence, would be declared the victor.

One was constantly asked how, after a fight in which infantry, cavalry, and artillery had mixed it up indiscriminately, the umpires were able to decide which army had gained the advantage? To this the easy answer would be that if they did not know how to do that they would not have been chosen to act as umpires, but actual examples explain the methods by which a decision was reached.

At the Green outside of Middleboro an outpost of the Blues occupied a farmhouse, and at the top of a hill directly above it a larger force of Blues were hidden behind a stone wall. A bicycle squad and a half troop of cavalry of the Reds planned to make the two Blue outposts prisoners. The bicyclers charged in advance of the troopers, pulling out of the road when they came to the first farmhouse, so as to permit the cavalry to continue on up the hill.

Lieutenant James E. Shelley of the Eleventh Cavalry, acting as umpire, rode with the troopers. They were met by a heavy fire from behind the stone wall, and the umpire ordered them to withdraw. Because the bicycle scouts outnumbered the outpost in the first farmhouse four to one, and had taken them by surprise, the umpire decided the latter had been made prisoners. But the cavalry he declared had been routed with serious loss. He pointed out to them that in a solid formation they had charged up an open road against infantry protected by a stone wall. On one side of the road was a steep bank, on the other a swamp. This had made it impossible for the troopers to deploy, and in advancing in column they had made a target of themselves that no one could miss.

A skirmish between the outposts of the two armies, taking place near Eddyville

Machine guns, screened by bushes and mounted on automobile trucks, used by the Blues

On questioning the officer commanding the Blues as to the number of rounds he had fired and at what range, Shelley found most of the men had not lowered their sights to the range the officer had given them. But for this neglect on their part, the cavalry would have been annihilated. Another point scored against the cavalry was that, in advancing at a gallop, each man had emptied his revolver, aiming directly in front of him. Had the guns been loaded with real bullets, those in the rear ranks would have shot their own men. The next time I saw that same troop in action they had benefited by the lesson of the fight at Middleboro Green, and, having left their horses under cover, were creeping up on foot upon the enemy, and, by taking him in the flank, won a glorious victory.

Rifles Outdone by Brains

FOUR companies of the Reds were firing from behind stone walls at two companies of the Blues, but, though the Reds outnumbered the enemy, the Blues were so strongly entrenched that the umpires decided the fire of the Reds was ineffective. On the left flank of the Blues there was an open field. From this field, under the protection of a stone wall, a half-dozen men could have enfiladed the Blue position and driven them from cover. But the Reds did not see this, and, though the umpires saw it, they could not in fairness point it out. In consequence the frontal firing continued without advantage to either side. At last there came up a side road a half troop of Squadron A, dismounted, and, even as he ran forward, their officer saw the weakness of the Blue position. He raced to the stone wall, fired one volley, and the Blues, caught without cover, took to their heels. The umpires pointed out that the moral of that fight was that four companies who used only their guns were not as effective as one man who used his brains.

Very often officers and men on both sides, although too well disciplined to protest, thought the umpires made mistakes. But each could see only his own position; the umpires, riding from one force to the other, were acquainted with the strength and weakness of both, and the experience they had gained of real warfare in Cuba, the Philippines, and China made it easy for them to render intelligent and just decisions.

Except that no one was killed or wounded, the maneuvers were carried on under conditions that approached so closely to those of actual warfare that the lessons learned were invaluable. There were, of course, mistakes; but they were errors which, had the men been actually under fire, would never have occurred. A body of troops hearing firing in front would hurry forward to reenforce their comrades. In actual warfare they would have seen that the road in which they were advancing was swept by shrapnel and bullets, and they would have avoided it. To meet such occasions the umpire played the part of the shrapnel and the bullets. He would gallop forward and cut off the approaching reenforcements. "This road is under fire from that hill," he would explain; "you must withdraw and you may advance again only under cover of those woods." To one who has looked on at several wars it was extremely interesting to see how frequently the problems of a real campaign presented themselves, and to note how splendidly the officers and men of both armies met them. To disembark nine thousand troops and march them through an unknown country and bring them into and out of action and to *feed* them is no mean problem. Now, was it a less difficult one to be prepared to meet the invading force at any point in a stretch of country that extended for twenty miles? That the maneuvers in so many ways were successful is not only greatly to the credit of those who directed them, but quite as much to the men in the ranks. To them the invasion was real and serious. They attended strictly to the work in hand. They had neither time nor inclination for skylarking. Their officers did not have to enforce discipline, the men themselves maintained it. Though they passed through villages and cities where saloons and restaurants were open, and though for two days every man was wet to the skin, during the entire week, in neither army, did I see one intoxicated soldier. And though at every step they passed cornfields, orchards, and kitchen gardens, not a single complaint of looting was made to the chief umpire. Even when the men rushed into "action," they were considerate of the property of others. And certainly the people of Massachusetts deserved consideration at their hands, for they made the invaders welcome; and, so far as the conditions of war allowed, received them in a most friendly and hospitable spirit.

Little Cost and Great Gain

OUT of the fund appropriated for the maneuvers, six thousand dollars was set aside to pay for damage to crops, fences, and gardens. At the end of the maneuvers it was found that, though for a week sixteen thousand men had been fighting over the country, the bill for damage was less than one thousand dollars. The maneuvers held at Pine Plains cost nearly four hundred thousand dollars. Those in Massachusetts cost less than one hundred thousand, and it is safe to say that the value of the lessons they taught to the sixteen thousand men engaged is beyond price. Instead of shuffling up and down the floor of an armory, each militiaman was out in the open air, marching under service conditions, alternately through dust and heat and rivers of mud, and sleeping under a cold, stinging rain. He learned to act and think quickly under stress of real excitement and tumult; he climbed on his knees through plowed fields and underbrush, ran unending hurdle races over stone walls, charged up hills and through rivers. The officers learned how to make and break camp, the value of scouting, of map-making, to handle their men, to lead them forward, to keep them under cover. That the Reds won, and the road to Boston lay open before them, does not greatly matter, for each man in each army, whether officer or private, returned home a better soldier, a better citizen, a more valuable asset to his country, and of glory there was enough for all.

The firing-line of the Reds as it steadily pushes on toward Boston

The crowds of land-eager men and women leaving the Spokane-Cœur d'Alene Interurban train for a steamboat excursion across Cœur d'Alene Lake, Idaho, and up the St. Joe River into the reserved region—behind the hills in the background—which was about to be opened by the Government for homestead claims

Uncle Sam's Grab-Bag at Cœur d'Alene

The Unparalleled Flood of Home-Seekers and Speculators to the Lottery of Indian Land

By ARTHUR RUHL

THERE was about one chance in thirty of winning a homestead from the Flathead Reservation; one in one hundred from the Cœur d'Alene; one in five hundred from the Spokane. All in all, about seven hundred thousand acres of this untouched north country land was to be given away—given, that is, to those who would give in return. You first must register at Missoula or Kalispell, Montana, for the Flathead lands; at Cœur d'Alene, Idaho, for the Cœur d'Alene lands; and at Spokane, Washington, for the Spokane lands. The drawings for all were at Cœur d'Alene.

Those who won must return next April when, in the order in which their names were drawn, they will choose their homesteads. To do this intelligently, they must first cruise the country over pretty thoroughly themselves or pay some one to do so for them. They must then live on the lands for five years, improve them, and pay in yearly instalments the Government's price of $1.25 to $7 an acre, or—on the Spokane and Flathead tracts—"commute" after fourteen months continuous residence by paying the entire sum at once. Most of the Cœur d'Alene land is timber land, and these claims may only be proved up by actual homesteading for five years.

The Flathead country to the east of Spokane in Montana was the most attractive "proposition" of the three. It stretches northward from above Missoula to Flathead Lake—four hundred and fifty thousand acres of valley, bench lands, and upland range between the Cabinet Mountains on the west, and on the east the Mission Range and the Kootenais. There is timber and water here, much can be cultivated without irrigation, and in the southern part, in the Jocko Valley country, the Reclamation Service already has a project under way.

The Spokane lands, against which there were such prohibitive odds, were also the least alluring as homesteads. They are sandy and rocky and dotted with slender scrub pines. There was a rumor of possible power sites, however, and as the registration point was the city of Spokane itself they were as much sought as the other two. Naturally, nearly everybody in Spokane registered. It was also regarded as a patriotic duty.

Drawing for Mountain-Sides

THE Cœur d'Alene country, which extends southward in Idaho from the shores of Cœur d'Alene Lake, is mostly mountain land clothed in pine and somber fir. A vast store of white pine lies beyond it, and a new continental line has just pushed through the reservation. There is said to be valuable timber in the re[illegible] and the whole country is beau[illegible] to look at, but, as a farming "proposition," rather like the Adirondacks or the Maine woods.

And into this curious grab-bag between one hundred and two hundred thousand people—the total registration was nearly three hundred thousand—stretched their eager and unthinking hands. Comparatively few had any real notion of what it means to get down face to face with the raw land and fight it into farms. Thousands, of course, merely took a chance just as they would drop a nickel into a slot machine, because they happened to be on the ground.

The Coming of the Thousands

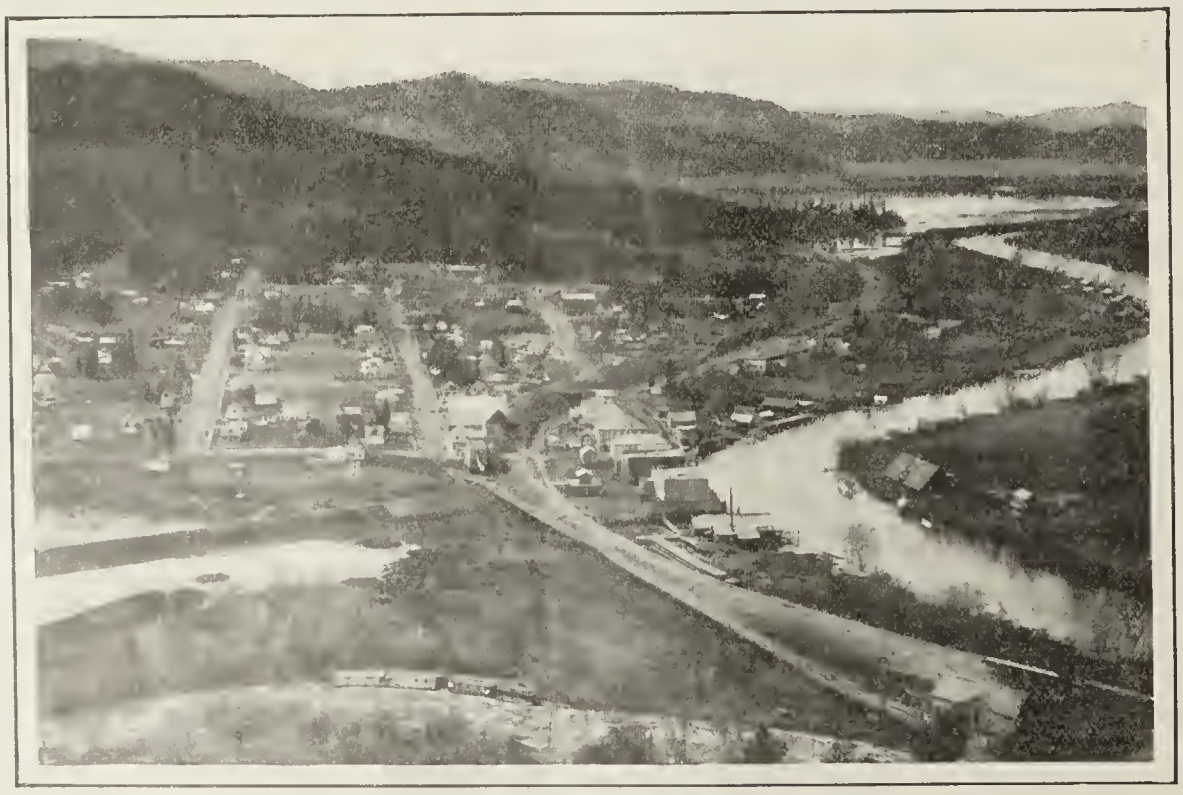
PERHAPS they saw the wheat rolling in a golden flood across the Montana plateau, just as it was rolling during the days of registration down in the Palouse and on the shimmering hot hills to the west of Spokane. The harvest was in full swing. Millions and millions of bushels were piling up, and every day despatches came up from the wheat country where the long "combined" harvesters crept like huge beetles across the yellow carpet under their slowly ascending spirals of dust.

Perhaps they merely saw a great heap of envelopes on a platform at Cœur d'Alene and the little girl in the white dress picking out one, and heard a loud voice read, while the telegraph operators tapped their keys: "John Bluestem, R. F. D. No. 6, Gopher, Minnesota—NUMBER 1!" And then, while the congratulatory crowd closed in, some representative of the Government stepped forward and promptly offered to buy the first number for $25,000, that the claim might be used for a town site. This was a favorite vision during the registration days—this and that stand of giant white pines over behind the Cœur d'Alene hills for which a lumber company was waiting to pay $30,000 cash.

For weeks the railroads had reached out their long arms and drawn the people in. In June, three thousand miles away in lower Broadway, you could read in the ticket office windows: "Uncle Sam Will Give You a Home." Thousands on their way to the Seattle Exposition stopped to register. A great many of these were capable, canny farmers from the Middle West, who, with a safe anchor to windward, studied the country shrewdly, not anxious, but ready, in case lightning should strike. There were many women—city school-teachers, widows, stenographers—dreaming vaguely of a quiet refuge "in the country," and selling out after they had proved up at a price which would let them live happily ever after. And there were some who were thinking—yes, hungry and almost ready to fight for—a home.

I came across one such on a steamboat excursion across the lake and up the "Shadowy St. Joe" into the Cœur d'Alene reserve. He sat on the upper deck with the wood sparks sifting down from the smokestack unheeded, his derby hat pulled back low over his ears. He was tanned, the corners of his mouth were tobacco-stained. He looked like a baseball player from a bush league team, except for his overwrought eyes and voice. He was talking to a bored giant in a black slouch hat who chewed a cigar and nodded, but said nothing.

Hunger for Home



"I'LL take a surveyor down there and get the thing lined up," he declared, "so there won't be no doubt about it. I wanta know just where she lies. Huh? Cost too much? All right—I'll get an Indian. You gotta know your section lines when you go up in April to tell 'em where she lies."

"Suppose you aren't drawn?" I suggested. He turned at once to me.

"If I ain't," he said, "I'll go to some man in the Government. You know the Government's helping the people put in irrigation projects. I'll go around to every one of 'em again until I find a place to stay. I'm going to see this thing through. I'm going to get a piece of land. What do you think of this country?"

I said that it was good to look at, but pretty difficult to homestead.

"Work?" he demanded. Do you think any one who wants a home as bad as I do 'nd care about the work

The town of St. Marie in the middle of the Cœur d'Alene reserve. The wooded mountains surrounding the place must be homesteaded—lived upon for five years—to perfect the title

if I can have the satisfaction of workin' for myself? I don't care *what* it is. I'll take what they give me. I tell you I've had enough of working and seeing the other man get everything out of it. An' now these capitalists want to stop the Government helping people irrigate because they say we're getting too much for nothing. I hear there is goin' to be a big fight on in this irrigation congress at Spokane. As if these guys hadn't done nothing else but get things for nothing. Hell! What's all their business anyway but speculating on some other man's labor! I gotta enough of it!"

A Friendly Fireman

HE HAD been a railroad fireman and then turned carpenter. "Say," he asked suddenly, "ain't you got some relatives down in California? You look just like a fireman I knew, used to run out of Los Angeles, and went into the grocery business afterward." We passed a little houseboat where a camper was just slipping some black bass from the stringer into the fish-box. This curious little river is choked with logs in the spring, in summer lined with homely little houseboats and fishermen's camps. "Say, look at that! Why, if I lived up here, I'd be hog fat with fish. All you gotta do is snake 'em out of your front yard on to the stove. Looka that flat there—there'd be a place for a ranch!"

I suggested that it might be covered with water when the melted snows came down in the spring. "Well—take one of them camping sites. Now I'll bet that guy over there gets good money for that. Why, a man could raise garden stuff on the flat, build a raft and get a little launch, and tow it all down to Cœur d'Alene himself." He swept his arm up and down the little river and across the steep slopes of fir turning from dark green to black in the twilight. "Why, this place'll be the summer resort of the world some day!"

Later, on the way back to my hotel, I dropped into a quick-lunch restaurant. The subdued, patient-looking, youngish man who waited on me and set the dishes down slowly, as if he were afraid of breaking something, had registered at Spokane and Cœur d'Alene. He had no money to go over to Kalispell. I asked him if he would live on a claim if he got one.

"Sure," he said quietly. "I want a home." He had plunged the year of the panic and rented some wheat land. The crop failed, he went broke, then rheumatism caught him, and he was doing this waitering to get along. Even the young Russian, into whose little tailor shop I stepped to have a button sewed on, intended to prove up. It was difficult to imagine him clearing a mountain-side of heavy timber as he squatted there, dull-eyed and pale, beside his hot iron, but he said: "A young fellow can afford the time. Sure. And I can work at my trade in some of the little towns."

General Honesty of Intention

NONE of these three was the sort of pioneer the West prefers—the shrewd, seasoned man with a little money who can "stand the gaff" and make a success of modern irrigation and intensive farming, yet each faced the task with cheerful confidence. The gullible ex-railroader who had a grievance was at least not nourishing it on the depressing air of a city tenement and the unhealthy sympathy of parlor Socialists. He had a notion of what he wanted and was going out after it. And if the Government land is to open a road to salvation to any it surely should be for such as these.

The thing that impressed me, in view of the gamble they were taking and the almost insurmountable difficulties of making a living for the first five years off such land, was the apparent intention of every one honestly to prove up. Each of those I talked with had worked out some sort of plan. Indeed, the very gamble of the thing, and the contagious enthusiasm of a crowd, none of whom knew what sort of sudden turn-down his life might take, filled all with unquenchable optimism. The trained nurse who sat in our section on the way to Seattle merely laughed at the prospect of being buried for a winter in the Cœur d'Alene snows. "One thing is sure," she said, "I'll have some chickens. You could till the shack with magazines. And anyway, what a good rest it would be!"

On the "Shadowy St. Joe"—carrying homesteaders through the rugged country they will have to overcome

A wise old lady also shared the section. She and her husband had come out from Wisconsin and tried to prove up on a homestead in the Nez Percé country. He cleared nine acres, but there was no living on the place, and

The Coveted Envelope

Miss Helen Hamilton with the first envelope which she selected from 105 696 upon the platform. It held the application of Isadore Selig, Myrtle Creek, Oregon

while he was away working in Spokane she lived alone up there in the forest for as long as three months at a time. Sometimes she had to get up at night to drive the wild horses out of the yard, and sometimes an Indian would stalk into the cabin, solemnly wait until she had cooked dinner for him, eat it, and as solemnly and silently stalk away. That was years ago. They were in comfortable circumstances now, and homesteading would be only a sort of vacation. "If you get a claim next to mine," she said, "I'll bake you a pie now and then. There is some great berries up in those woods."

On the steamboat that day were farmers from Wisconsin and Illinois who knew villages and people I knew. There was a mild little old gentleman from the Puget Sound country—which he thought the finest country in the world—and there was a husky young Swede who told the old gentleman he would not live in the Puget Sound country if they gave him a ranch. He didn't mind cold, but he couldn't stand the coast rains or the muddy roads, where, he said, people "burrow all vinter like vood chucks."

He had been in the Cœur d'Alene country for a year and knew it root and branch. He had registered, of course, and he would take up a claim if he got in the first fifty. After that, what was the use? You could go outside of the reservation and prove up on much better timber without the trouble of homesteading.

Three Millions Spent in Railroad Fares

THERE were two soft-voiced giants from California, who said little and smiled all the time a vague impenetrable smile. They had cut their eye-teeth long ago. It is pretty hard to tell a Californian anything new about boosting or promotion or real estate or the profits from farming. Talking comfortably in the shadow of the lower deck as the moon came up over the lake, we went over the whole West from "San Bernadoon" to Wenatchee and Snake River. Rain, spring frosts, alkali, gumbo, subsoil irrigation, apples, town lots, and wheat—the whole story. The next day they were going over to Kalispell—determined, in spite of their good-humored skepticism, to see all this north country had to show them.

There was a little tanned farmer with a catfish mustache who had been in the rush for the Cherokee strip, sixteen years ago, and had come up from Oklahoma to see what he could see. He had missed out on the Strip, but rented land from the Indians.

"I was looking for a homestead," he grinned, "with a good two-room house and a wind-mill and a team of horses and a forty or so in wheat—and so I went in one side and come out the other."

Crowds as diversified as ours swarmed up to Spokane from all over the land. The overland trains, dusty and travel-stained, came up over the horizon each morning, crowded to the rails. The land-hunters spent, it was estimated, three million dollars for railroad fares—enough to have paid between four and five dollars for every acre of land the Government gave away. They packed the Spokane hotels until an outsider, like myself, had to tramp to half a dozen of them before he could find a room.

Every other window carried a notary's sign—"So-and-so has been designated as and is" an authorized notary public. The fee for each registration was twenty-five cents. Some notaries in good places—the lobby of the Pantages Theater, for instance—made $100 a day. "The only trouble," one of them said to me, "is the time it takes some of these old shell-backs to write. They get a good grip on the pen and—slucks! You could register a dozen while they're signing their names." Another $75,000 was spent in this way.

The Harvest of the Barbers

THE less experienced had quaint adventures. Dusty and tired, they came up out of the sage-brush and steered for the nearest barber-shop. The barbers cut their hair and innocently suggested other delights. Their weather-beaten old faces were massaged and anointed with perfumed creams, they experienced electric vibrations, champoos, and the "neck rub." They thought it was all being given away, and they awoke to be handed itemized checks amounting to several dollars. Two of them rebelled one evening when their bill was $8.65. The barbers pounced on their baggage. They arrived at a police-station carrying, it was said, only the handles of their "grips." There were so many such cases that the Mayor finally issued an order commanding the barbers to behave.

They packed the post office, and every day sent twenty thousand post-cards home. It would be hard to appraise the value of the advertising they freely gave Spokane. Spokane is the center of this newly [illegible] Empire—the northwest country west of the Rockies and east of the Cascades. Set in a background of pine

John Smith Borrows $20

The First of a Series of Articles Concerning the Methods of the Salary and Furniture Loan Usurers, the Chiefs of the Business, and the Matter of Their Suppression

By J. M. OSKISON

THE NEW YORK E

"LOAN SHARKS" DRIVE MANAGER TO SUICIDE

When the Crawford ... Company, of ... Brooklyn, opened for business today its ... to interest, George I. French, of No. 1056 ... Pacific Street, lay dead, a suicide, at the home of his mother, Mrs. Ella F. French, No. 752 Lafayette Avenue.

French shot himself ... after ... an attempt to kill ... to meet the ... demands of loan sharks, who had been persecuting him for two years.

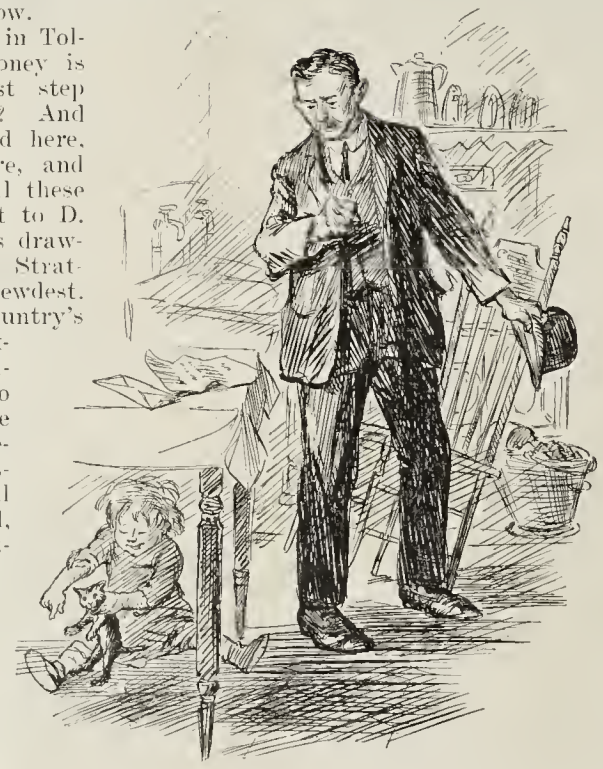
"In two years," said a member of the firm which employed French, "our manager has paid out $2,000 for $1,000 borrowed. The interest rates were so exorbitant that French got in beyond ... being able to pay. He ... took ... powers of attorney. ... calls it, got so that he would borrow from one to pay the other, and the end of his story came. He could not get another cent, and his salary was being drawn by the money lenders.

French was twenty-four years old. His wife is twenty-two, and had not been told this morning that her husband was dead. After a fight with his mother, in an effort, it is believed, to get money, he went to the dining room, drew a pistol and shot himself through the head.

NEXT to the saloon, the worst menace to the poor is the loan shark. The legitimate, necessary business of helping the man with a small salary and no credit over the hard places has fallen into the hands of the merciless and greedy. To the small borrower the cost of money has been raised until the bare facts are astonishing. Loan offices thrive in every city in the United States, and the total number has mounted into the thousands—their clients number hundreds of thousands. And the business is growing abnormally fast. The poor man must pay twenty times as much for money borrowed as the business man with established credit when the risk is little greater and the necessary expenses are but slightly higher. American toleration is carried far when we allow men like D. H. Tolman and John Mulholland and Charles E. Stratton to syndicate the business of robbing the needy.

Why should these usurers and their swarming imitators be permitted to ply their trade? Why are usury laws ineffective? Why do the sharks smile at sporadic public agitation against them? Backed by facts, reports, earnest talks with men who have fought the loan extortion evil, statements from owners and managers of offices, surrounded with sheaves of evidence, I find a simple explanation: lack of respectable competition.

Yet a beginning has been made. Out of a score of scattered, hard fights waged against the loan tribe in a score of cities, have arisen some fifteen vigorous remedial loan companies. These have lately been organized into a National Federation and affiliated with the powerful National Conference of Charities and Corrections. Also, the Russell Sage Foundation has appointed a special agent for the study—not of sharks' methods—but of the methods of the remedial companies. There appears, then, the dawn of a new day for the borrower.



The Simple, Tragic Story of John Smith

THE story of the loan shark's victim is most human, essentially tragic, yet one of the simplest. Here is its skeleton: John Smith, who is a low-paid clerk in Jones's department store in Our City, or a fireman, or a policeman, or trolley-car conductor, or a janitor, or a typesetter, or a machinst, or a unit in any one of forty other businesses that Our City supports, needs $20. Pay-day is a week or two weeks ahead; the need is urgent—a need of to-day. A child was born to John Smith's wife last night, and there are a dozen things required to-day. They are things that the grocer on the corner, who knows Mrs. Smith, can not supply. John Smith has no friend who can lend him $20: he thinks of the pawnshop, but not with favor; there is no one in the organization for which he works with authority to advance the $20. In the morning paper he reads (an average issue of the "Morning World" of New York will carry thirty-five loan-shark advertisements) are a group of small announcements of concerns that "lend money without security," at two or three per cent, or at "lowest rates," on household goods or salary. One advertisement explains that the goods are left in the borrower's possession. Another says that the transaction is "private," and that repayments can be made on easy terms. All emphasize the speed with which money can be secured.

John Smith runs over the alluring offers. He finds that of "D. H. Tolman: Salaried people advanced money upon their own names without security, on easy payments. I have the oldest established business in sixty-three principal cities." Surely a reliable man. He goes to the Tolman office, to meet a young woman's sharp scrutiny at the little window of the outer office. Yes, money is to be loaned. John Smith goes into the private office and answers a score of questions as to where he is employed, how long he has worked at his present job, where he lives, with what tradesmen he deals, his family connections, his earnings, whether he has borrowed money from any other loan office. He signs an application blank, and is told to come back next day.

The advertisements were a bit misleading—John Smith wants the money to-day. He tries at another office, and finds that to-morrow is the earliest he can get money. At the second office, too, the same list of questions is asked. On his way home John Smith gets some supplies at the drug-store on the promise that he will pay for them to-morrow.

Next day the young woman in Tolman's office says that the money is ready. Will Mr. Smith just step into the private office again? And sign these papers? Here, and here, and here, and here, and here, and— But what are all these papers? Notes, an assignment to D. H. Tolman of the salary he is drawing, and a power of attorney. Stratton of Denver, probably the shrewdest, most businesslike of the country's sharks, enumerate, in his booklet of instructions to office managers, the following papers to be signed and executed by the borrower: First, a note; second, a special contract of assignment; third, a general assignment of credit; and, fourth, a general power of attorney, the first and last only to be filled out before the borrower signs. John Smith asks the young woman to remove her hand from over the papers. He finds that he is to sign twelve notes for $2.50 each, one to be paid each week for three months.

"I won't pay him another cent!"

"What! pay $30 for the use of $20 for three months? How about that promise of legal rates of interest?"

"Now, really, Mr. Smith," argues the young woman, "you must know that we can't do business on that basis." In view of the fact that he has so little security to offer ("only" his job—"only" the very means by which he lives), that the expenses connected with the making of the loan are very heavy (perhaps two hours' time of a twelve-dollar-a-week investigator and ten cents for carfare have been spent), and that the fees for recording the papers (which is not done) are as high for a small loan as a big one, Mr. Smith is asked to consider whether or not the loan could be made at a lower rate.

Whatever John Smith's honest opinion of the young woman's explanation, he signs the papers. If his need were not pressing, and if he were not one of an increasing class of wage-earners whose normal income and outgo are delicately balanced, he would not be in Tolman's office—Tolman himself would not exist as a menace to the poor.

What has this poorly paid clerk let himself in for by signing Tolman's blanks? Just this: to keep out of his weekly pay envelope $2.50 every week for twelve weeks in succession and pay it promptly to the young woman in Tolman's office; to live for three months on $12.50 a week instead of $15; to change from an economical way of living to a miserable period of disheartening self-denial and, sometimes, actual hunger; to be unable, when the $20 is gone, to incur a cent of expense on account of his wife or child from the time the baby is born until it is almost ready for short clothes; to fear terribly any accident that will cut down his working time.

For this John Smith gets a few days of satisfaction. For a week, possibly, he can play the indulgent husband, the proud father. Possibly these sentiments are reprehensible—possibly he should reflect, on the day the doctor tells him it's a boy, that he must be very, very saving, and call in a neighbor to help his wife in the house for a week or so. He isn't compelled to go to Tolman and pay 200 per cent for money to hire a girl for a little while, to buy fruit for his wife and drinks for the boys at the store. He doesn't have to, but (here is the important fact) *he will*. John Smith is very human. Tolman, in sixty-three cities, knows it; Stratton, in thirty-nine cities, knows it; Mulholland knows it; Connable of New York and Brooklyn knows it; Masters of Washington knows it. It is the most valuable bit of knowledge in the world to the loan shark. Somewhere, in times like this, John Smith is going to get money.

"W... Mr. Smith sign here, and here, and here?"

The Harassed Borrower Begins to Figure

THE average impression is that Smith is an honest man. There is evidence enough to back it up. He pays his rent and his grocer's bills quite as promptly as his employer. Tolman and the others of his tribe find that out before they lend money to him. He has borrowed $20, and he means to pay it back, with interest. It was a hard bargain that Tolman's young woman drove, but he means to stick to it.

But at the end of the eighth week Smith begins to figure. He has paid back $20—the sum he borrowed. Two dollars and a half of it Tolman has had for seven weeks, another two and a half for six weeks, and so on. That money is already earning a huge rate of interest for Tolman—and there is still $10 to pay. At the end of the ninth week John Smith uses the $2.50 that should have gone to Tolman's office to meet some small household expenses. On Monday he receives this notice (printed) from Tolman:

"The payment of $2.50 on your note, due January 23, has not been paid. No *extensions* are allowed on these small payments, and we shall expect you in *immediately* to take it up. Please consider this notice *final*."

Naturally, Smith can not pay the $2.50 immediately. Tolman knows it as well as he. But, being honest, he goes to Tolman's office to explain why he did not pay. The young woman is sympathetic, but firm. If he will pay $5 on the following Saturday all will be well. When that day comes, however, John Smith can not see how he can spare $5 out of his $15, for the cost of living from day to day has not gone down, and it would be inhuman to ask his wife to cut down her already insufficient allowance. With some idea of obtaining what he calls a square deal he goes to Tolman's office on the next pay day and offers to pay $2.50 in settlement of the debt. He argues that $2.50 interest on a loan of $20 for ten weeks ought to satisfy a reasonable man.

His argument, of course, is wasted. The young woman declines to consider it—prompt and full payment of the notes is absolutely required. It is too bad that Mr. Smith finds difficulty in paying, but—

But wait a moment. How would it suit him to make another loan, pay off the $10 due on the old loan, and have some money to square up his household bills? Another $20 loan will accomplish it. Smith is still human, and his needs are pressing. He signs a new series of notes, sees, with satisfaction, his name torn from the four old ones and passed over to him, and receives—not $20 this time, but exactly $10.

Begins then once more the weekly payments—$2.50 from $15 twelve times in succession. That is, if nothing turns up about the sixth week to make Smith pause again to figure what he will be obliged to pay if he carries out his agreement, or (what is unlikely) if no pressing need for money in the house turns up. At the end of the tenth week of the second repayment period, Smith remembers that for the $30 cash he has had from Tolman he has repaid in eighteen weeks $45, and he still owes $5.

Helpless Wrath and the Cool Young Woman

"CONFOUND him!" John Smith cries (for he is a poor man, a very human and, by this time, shabby young clerk who begins to understand the infamous cheating business that D. H. Tolman is in), "I won't pay him another cent." He goes to Tolman's office to say that, and is met by the young woman. Can he swear at her? Why doesn't this man Tolman run his business himself, so that they two, lender and borrower, might settle the matter as men should? But Tolman has foreseen this psychological moment, and has provided this young woman manager (whom he may pay as much as $15 a week) as a shield between himself and his victims' wrath.

No compromise unless forced to it is one of the axioms of the loan shark. John Smith is told by the cool young woman that if the two remaining payments are not made the salary assignment to which he attached his signature will be filed with his employer; that any default in the payment of a note makes payable at once the whole sum due, and that the $5, to-

(*Concluded on page 34*)

THESE pictures show the cause, as those in last week's issue portrayed the results, of the uprising in Barcelona. The photographs were smuggled through the lines of the Spaniards at Melilla. Spain's unpopular campaign against the Moors has continued for more than a month with constant and vigorous fighting, while very slight advantage has been realized. On July 10 the Riffian tribesmen of this settlement on the coast of Africa—hitherto used by Spain as a convict station—rose against the construction of a railway through their territory. General Marina of the Spanish garrison has been compelled to call for a large number of troops to reenforce him. The prospect of Spanish victory at the present time appears to be remote; while the difficulty of holding the country permanently, if subdued, is even more formidable.

The Campaign in Africa Which Has Shaken the Spanish Throne

1: The Spanish balloon corps at Melilla sending up a military balloon to ascertain the movements of the tribesmen. 2: Spanish infantry resting behind their breastworks after repelling an attack. 3: General Marina, commander of the garrison at Melilla. 4: Moorish prisoners being marched into Canello [illegible]

The Suppressed Correspondence of Congressman Jones

Divulged by WALLACE IRWIN

"You hadn't the nerve to sass Uncle Joe"

Mending His Fences

¶ The second installment of a short series of epistolary communications bearing more or less directly upon the topics of the day

Illustrated by VET ANDERSON

MYSTERIOUS *Postal-Card from Minnehaha Falls to Hon. Dan'l Webster Jones.*

"DEAR SIR:

"DO YOU remember what 'Gum Shoe' Stone gave the Pullman porter? That's what your loving constituents will hand you at the next Democratic primaries. Yours truly,

"ARDENT ADMIRER (*retired*)."

From the Rev. J. Hemingway Clegg-Allardyce, Church of the Perfect Peace, Dockweed Park:

"MY DEAR CONGRESSMAN JONES—Next Monday will be Labour Day, when the Masses—the great Working Masses, in whom we are *both* interested in a way, my dear Mr. Jones—will hold their annual feast and revel. Realizing as I do the *splendid service* you are rendering not only the State, but the Nation at large, I can readily see how your heart must go out to the tribulations of the suffering peasantry of far and pagan lands.

"The members of the Youths' Uplift Society of this parish are arranging a series of lectures, the proceeds to go to the downtrodden peasantry of Corea. Can't you come the evening of Labour Day and deliver a short address of, say, two hours' duration on some *uplifting* non-political subject? I regret the necessity of requesting you to *avoid politics*, my dear Congressman; but might I suggest that your discourse be on some *helpful* subject, like 'Hints to Success,' or 'The Boyhood of Lincoln'?

"I am sure you will enjoy our church here, Mr. Jones. It was endowed, as you doubtless know, by Mr. John D. Timbertaker, the world-famous lumber financier whose influence in the recent Tariff Revision was so broadly appreciated throughout the nation. Mr. Timbertaker, though a *great believer* in Reform, when properly curbed, has *especially requested* that your lecture be of a non-political nature. I hope you will appreciate the high aim of our parish, which is to be as *helpful* as possible without doing violence to the most cultivated taste.

"Looking, my esteemed Sir, for an early and favorable reply, I am

"Most cordially and sincerely yours,

"J. HEMINGWAY CLEGG-ALLARDYCE."

"P. S.—I am enclosing fifty season tickets, which you will do us a *great* service by placing with your friends. Their price, as you will notice, is $5 each.

"J. H. C.-A."

From Riley B. Nagle, President of the Roosevelt-Socialist Reform Club, Ferndale:

"DEAR SIR—The Roosevelt-Socialist Reform Club of this place will give a literary program on the evening of Labor Day, and we should greatly appreciate a short address from you on that occasion. Our club numbers five hundred members, of all nationalities, employees of the button factory here. We should like to hear your views on government ownership, the single tax, future of the railroads, etc. Would you speak on 'The Boyhood of Lincoln'? The proletariat here are very much interested in that subject.

"Thanking you in advance, I am,

"Yours truly, RILEY B. NAGLE."

Telegram from Pahoosicka:

"Reserve Labor Day aft for Pahoosicka important function here. L. O'CONNOR."

From Chamber of Commerce, Arcadyopolis:

"DEAR SIR—The Chamber of Commerce is arranging a lunch for you here on Labor Day. Don't disappoint us! Yours respectfully,

"H. P. PARMELEE (*Sec.*)."

From the Stockgrowers' Association, Pappsburg:

"DEAR SIR—We trust you will honor us with your presence at our Grand Annual Workhouse Parade on Labor Day. A speech would be appreciated.

"WILLIS G. HOUSEMAN (*Sec.*)."

From Congressman Hardnutt, Beverly, Massachusetts:

"DEAR JONES—During the last session of Congress you well earned your title of 'Doolittle Dan'—don't get mad, my boy. Many young Congressmen have earned less and worked harder for it. In dumbness there is strength. Because you hadn't the nerve to sass Uncle Joe last spring, because your maiden speech gasped and died without a peep, *you* are still alive! There's going to be a Slaughter of the Innocents this fall, as soon as the Pharaoh from Danville begins making up his committees. The young, the beautiful, the tender will all get it in the neck. But you, Daniel Webster Jones, *you* shall not be numbered with the slain, because you have been modestly hiding in the bullrushes ever since Congress opened. How will Uncle Joe ever think to knife you when he doesn't even know you're alive?

"How do you stand with Adolphe Schwartz, the Boss Butcher of Pahoosicka? Schwartz, although a Plain One, practically controls the meat interests of the State

"Mr. John D. Timbertaker and family congratulated the speaker"

—and you know it's Beef that put Dubbs in Congress. Watch Schwartz! Nurse Schwartz! Be good to Schwartz, and maybe Uncle will be good to you!

"As ever, HARDNUTT."

From Hon. Lawrence O'Connor, President Purity League, Vice-President Democratic Club, Secretary Get-Together Club, Honorary President Larry O'Connor Entertainment Association, and Gen'l Manager Pahoosicka Real Estate and Improvement Co.:

"DEAR JONESEY—Glad you got my wire. Now I'll explain what we've got you down for. The Sunrise County Baby Show will be held here on Labor Day, and you're it—see? We decided to make you Judge. We boys are all on that you ain't much of a Fond Mother when it comes to picking the squabs; but this Baby Show is going to be the political move that made you famous.

"Stop, look, listen! Adolphe Schwartz, the butcher, has got a twelve-months-old bouncer who is—I swear, ye gods!—the square-headedest, homeliest, bumpiest, stupidest yearling that anybody ever saw. Well, there's going to be a prize of a silver milk mug for the Cutest Baby in the show. Schwartz don't care for the cash value of that milk mug, but he'd rather see his child get a prize for beauty than anything else Congress can give him.

"Need I say more?

"Monday at two sharp.

"Yours, LARRY."

From the Dockweed "Review," September 8:

"The Hon. Daniel Webster Jones delivered the fifth lecture of the Uplift Series last night at the Church of the Perfect Peace. Mr. Jones's subject was 'The Boyhood of Lincoln,' and the speaker's remarks were full of sympathy and helpfulness. He pointed out the fact that Lincoln, though poor, had many qualities in common with his more prosperous brethren. He was a constructive rather than a destructive statesman, never seeking to pit class against class, as so many of our contemporary demagogues do. Lincoln had as his advisors, Mr. Jones said, many men of wealth and substance; and his respect for Property was foremost among his many sterling qualities.

"Mr. John D. Timbertaker and family occupied prominent seats and were first among those to congratulate the speaker."

Ferndale "Battle Cry" (Socialist), September 8:

"Hon. D. W. Jones was the principal speaker at the great Labor Day meeting here last night. Congressman Jones was somewhat late to arrive, but the spirit of his address well rewarded his hearers for their wait, his subject being 'The Boyhood of Lincoln.'

"'Lincoln,' the speaker said, 'owed his sympathy with the downtrodden working class to the hardships of his early career. He ever sided with the Poor Man in his eternal battle with the Rich Man; in fact, his life stands as a monument to the rights of Man as opposed to the rights of Property. If Lincoln lived to-day,' inquried Mr. Jones, 'would he not strike at the shackles of the Wage Slave as he struck in '63?' [Applause.]."

From Hon. Lawrence O'Connor, President Purity League, etc., Pahoosicka:

"DEAR JONESEY—You rushed away from here so quick after the Baby Show that maybe you didn't realize the full extent of the damage.

"Didn't I and Wm. J. Doyle and the other gentlemen of the Committee point out the Schwartz baby time and again—the fat, red one with the sore eyes next to the cloak-room? Didn't we tout you how to look calm and unprejudiced like the Supreme Court on a Northern Securities case, but to KEEP YOUR EYE ON THE SCHWARTZ BABY?

"Then what kind of performance did you give us? You made a speech. That was good enough—one of those honest, old-fashioned chin-cyclones about 'Our Hope Is the Rising Generation.' Then I gives you the cue, whispering 'Remember the Schwartz Baby'—and what did you do? Took the prize and made a dead bee-line for a little blond kitten in the middle of the Exhibit. Wm. J. Doyle, when he saw where you were headed, says 'O Lord!' like that under his breath—and Wm. J. is a churchly man, too. I says 'No, it *can't* be!' but yes, it was. You were giving the prize, the Baby Prize of Sunshine County, to the Schwartzheimer baby! Of course, we realize how you could get twisted on the names Schwartz and Schwartzheimer. We can forgive you; but Schwartz can't and won't. The idea that a U. S. Congressman should mistake *his* baby for the litter of—do you know who Schwartzheimer is? Don't you remember that little Hungarian Spitz of a druggist who went up to the State Convention three years ago as Schwartz's instructed delegate, at the time of the big Beef Scandal? Don't you remember how he bolted his ticket and split to the Republican press and queered the State for Schwartz? Well, that man's Schwartzheimer.

"I don't say, Jonesey, that there ain't some way out of this. I can't think of any way, that's all.

"Yours to the finish, LARRY."

"Took the prize and made a bee-line for a little blond kitten in the middle"

The Week

THE Italian Government is struggling to hide the unrest and agitation which are everywhere manifest over the approaching visit of the Czar of Russia.

Spaniards and Moors are settling down to an all-the-year campaign.

The Congo question recurs. Sir Arthur Conan Doyle, who has always had a keen nose for crime, is on the trail of Leopold, King of Belgium. What has happened in the Congo Free State with the natives he calls "the greatest crime ever committed in the history of the world." M. Renkin, the Colonial Minister of Belgium, has gone out to the Congo to report. "If we wait for any practical result from M. Renkin's visit, then we wait with our eyes open for at least three more years of this orgy of blood, lust, and greed."

While the Wright machines are performing in the sky at Reims, France, and holding their own against all comers of all nations, and while the London "Spectator" calls the Wright brothers "Americans of the old school in their reticence and simplicity, yet fortified by an extra dose of the latest scientific enterprise," the New York "Sun" says of the machine: "It is all very well, perhaps, for the army to have a pretty little plaything with which the Signal Corps officers can amuse themselves on dull days. But it always has a dear little house to get into during unpleasant weather, and it is never in anybody's way. We have nothing to say in criticism of the deal whereby this most excellent and delightful toy was acquired by the army. We give it our benediction and hope it will be too polite to hurt anybody."

Prosperity is being proclaimed from the house-tops. Crops, industry, capital—all the omens seem favorable to a winter of content. That which emphasizes the better times coming is the subsidence of the tariff dispute which, if not settled, is at least quiescent.

Wheat, corn, and oats have outdone themselves in fecundity, and mighty will be this year's harvest with three billion bushels of corn, seven hundred millions of wheat, and a round billion of oats. Go West, men out of work.

To make the desert bloom like the rose is the purpose of the Dry-Farming Congress and International Dry-Farming Exposition to be held at Billings, Montana, in the last week of October. The immediate plan is: "To discuss and compare methods by which the great area of arid land can be profitably utilized under thorough tillage by which the natural rainfall can be conserved." The longer hope is a "great educational propaganda by which, eventually, the arid districts of the entire world can be populated by prosperous and contented agriculturists."

The death-rate list of the week includes the brilliant and public-spirited priest, Father Ducey of St. Leo's, New York, and Maria Parloa, whose cook-book used to fill out the family bookshelf with the Bible and Shakespeare.

Once again Booker T. Washington speaks the hopeful word on the troubled "negro question." He says to the business men of his people: "A little more than forty years ago, when the negro was made free, he had almost no acres of land; now he has an acreage nearly as large as New England. Then he had almost no homes; now he has four hundred thousand homes. Then he had few farms; now he has two hundred thousand farms. When the American negro was made free about three per cent could read and write; now fifty-seven per cent can both read and write."

Walter Wellman, who is indefatigable in planning balloon trips over the North Pole, has met with one more setback in an endless chain of disaster. He flew thirty-two miles from Camp Wellman, Spitzbergen, and then lost overboard a thousand pounds of provisions.

The rioting at McKee's Rocks, near Pittsburg, continues and even increases. The employees of the Pressed Steel Car Company have been reenforced by groups of desperate women. The strike began on July 12, because of a new "pooling system" of paying the workers. The great Swedish strike, which in magnitude began to approach a universal strike, has simmered down. This is the third attempt to paralyze general industry within a twelvemonth—first in France, then in Spain, and now in Sweden.

William Winter

WILLIAM WINTER, distinguished among American dramatic critics, has resigned from the New York "Tribune" after forty-four years of service. He has been poet and essayist, as well as critic, and his name in American letters will not be immediately forgotten.

In a letter to Hart Lyman, editor of the "Tribune," Mr. Winter says:

"I resigned from the 'Tribune' staff because of a perfectly plain, diametrical, irreconcilable opposition of judgment as to editorial policy and duty, in the public interest, relative to theatrical conditions and affairs.

"Since July, 1865, up to about two years ago, I opposed and denounced in the 'Tribune' every bad, vulgar, indecent play, and every person and every proceeding in the theatrical world injurious (in my opinion) to the public welfare. In doing so I not only did not incur censure from the editor, but I was often encouraged and sustained in that, obviously, right course.

"About two years ago there came a change. Many articles of mine, dealing with manifest abuses in the theater, have been within that time rejected altogether. Many others (some of the same kind, some containing critical condemnation of plays) have been cut or modified in important passages.

A Record of Current Events

"In protesting against that injustice I wrote to your managing editor, Mr. Brown, January 17, 1909: '. . . My articles, relative to indecent and therefore reprehensible plays have been, and are, framed for the purpose of doing as much injury to the business of the persons exploiting them as is possible; of informing respectable persons of what is going on in the theater, and of keeping as many readers as possible away from obnoxious and injurious plays.'"

Mr. Lyman wrote to Mr. Winter:

". . . I have a duty to this paper, which I must discharge according to my own judgment and conscience, however fallible. . . . It is my opinion that the theatrical news published on Sunday should not be condemnatory."

Some of Winter's criticisms have been remembered for days after the morning paper reached its subscribers. Such were his remarks on Sarah Bernhardt's "Hamlet" and on "The Gay Lord Quex." So trenchant was his attack on what seemed to him incompetent acting and deplorable tendencies that the phrases would be discussed by the "Tribune's" night copy desk, when at 12.30 the seven men rested from their labors on the first edition, and had the brief half-hour respite before the later editions were torn off.

His accurate and wide knowledge in his own department made him a scholar, in the truest sense of the word. And, further, he had an acquaintance with English literature which shone through every column he ever wrote in the midnight rush to press.

His weakness, which has diminished his influence, was a tone of petulance, which rose to throaty shrillness when he encountered frothy and impure modern plays and mob favorites whose technique was faulty and who presented Shakespearian rôles when they were geared to drawing-room dialogues, or who helped to popularize Ibsen, Sardou, Sudermann, Pinero, or Hauptmann. In his insight into the dangers of releasing such material over the footlights as is found in some of the Ibsen drama, for instance, he sometimes failed to do justice to the qualities of power and intellect which that drama contains.

If his destructive analysis was wounding and bitter, no less convincing has been his gracious encouragement for the great performers. Not only did he laud the giants who were dead, but he fought manfully for the best of his contemporaries, and in recent years Henry Irving, Ada Rehan, and Richard Mansfield, among many others, were furthered in their career by a praise that was detailed and large-hearted.

Winter's ripe mind and his equipment of fact and reminiscence made him the friend of more than a few of the notable Victorians, an equal among equals.

A Pocket Air-Tank

CLARENCE HALL, explosives expert at the Pittsburg Experimental Station, where the technological branch of the Geological Survey is experimenting for the protection of the American miner, has perfected a portable air-tank, capable of supplying pure air to a miner for a period of a half-hour in the densest gaseous atmosphere. The invention has been given absolutely to the Government; and the Government, controlling the patent, will permit the manufacture of the device by outside parties at so low a figure of cost that practically every worker in coal mines can purchase one for his own protection.

Mine disasters in this country have repeatedly shown the need of artificial air for but a few minutes, to enable the majority of the workmen in gas-filled passageways to reach pure air and safety. A German oxygen helmet, weighing nearly forty pounds, and costing about three hundred dollars, is being slowly brought into use here at mine-rescue stations. A year ago, however, there were but ten of these in use, and the number has not increased to more than three hundred.

The new device can be bought by the working miner for fifty cents, it is believed. Water dripping upon sodium peroxide gives off free oxygen and sodium hydroxide, and the latter, settling in the bottom of the holder, absorbs the carbon exhaled in the breath of the miner. Wherever the miner hangs his coat, he can be sure of the half-hour safety device, held easily in its pocket.

The Colorless Czar

THE Czar came to England and went away again. The result was unexpected in that it was so commonplace. There were no violent demonstrations against his person, and the visit was provocative of little or no political effect. So all parties found the trip a tame affair.

The "Saturday Review" says:

"The visit of the Czar has been a complete success socially, but it is a success that may easily be exaggerated on the political side. We are inclined to like the Russians because we believe that they dislike the Germans. It is wise to recognize that Russian policy and our own may not always coincide."

The "Spectator" pleads for continued kindliness toward the Czar and a policy that will not damn him for certain internal troubles and injustices inside his vast domain. They reason by analogy and say:

"We do not suppose the 'Daily News' and the 'Nation' and the other advocates of the policy they recommend as regards Russia approve of the treatment of negroes in the Southern States, or the horrors of the penal-contract system in certain of those States. Yet they do not—and very wisely in our opinion—because of their objection to these things suggest that we should insult the President of the United States or the Governors and Legislatures of the States in which

Looking up the stretch of the new automobile track—the fastest in the world—which was inaugurated by the sprint and distance races of August 19-21. The cost of constructing the course approximated $400,000

The contestants making ready to start in the 50-mile event—several records of long standing were broken in the course of the carnival, in which the 10-mile distance was covered in 8 minutes and 54 4-10 seconds by Louis Chevrolet in a Buick. The attendance on the opening day reached nearly 10,000 people

The wreck of the Knox car, in which William A. Bourque and Harry Holcomb were killed, competing for the Prest-O-Lite Trophy of $1,000 in the 250-mile race, August 19. On August 21 two spectators and a mechanician were killed by another car which left the track and plowed through the crowd

Opening of the Indianapolis Motor Speedway

"If people who care at all for music really knew what a genuine delight the Angelus is, I don't believe there would be a single home in America that wouldn't have one."

THIS is what one owner thinks of his ANGELUS. There are thousands of others who are even more enthusiastic. Why do *you* deny yourself the recreation, the education, the real enjoyment that awaits you in THE NEW 88 NOTE

ANGELUS Player-Piano

But when you buy your player-piano, be careful. Remember that all player-pianos do not contain the ANGELUS. Only the ANGELUS instruments are equipped with the

Phrasing Lever

that wonderful and most important device, which gives positive and instantaneous control of tempo. The pressure of one finger will accelerate or retard or hold the music roll, thus enabling you to obtain every gradation of tempo, and consequently to produce artistic effects which absolutely cannot be produced with any other player-piano. Other patented devices and exclusive features include the famous *Melodant,* the *Diaphragm Pneumatics,* the *Melody Buttons,* the *Duplex Spool* and the *Artistyle Music Rolls.*

The ANGELUS has also a playing range of 88 notes—the full compass of the keyboard, and it is constructed so that all ANGELUS and standard 88 note rolls and all ANGELUS and Standard 65 note rolls can be used, thus making available the greatest possible selection of music.

the evils complained of take place, or declare that they are not fit associates of a free people while they allow such things to happen."

The Fliers in Court

THE Wright brothers believe their patents have been infringed. They have brought suit against the Aeronautic Society to restrain it from exhibiting the Curtiss aeroplane.

The Wrights call their invention "the first instance in the history of the countless attempts to produce flying machines wherein a heavier-than-air machine ever made aerial flights and wherein the machine was within the control and will of the operator."

It will be a delicate matter for judicial adjustment to determine how much freedom of adaptation shall be given to later inventors who improve upon the original. A mistake at either end retards flight. The inventor must have his reward, or he ceases to invent. The invention belongs to the man who can make the best use of it, or else it will lie on the shelf.

It was known at the time of Orville Wright's accident on the Fort Myer drill ground that certain aeronauts pried among the locked-up wreckage of the machine for the purpose of studying his devices.

Summer Drownings

THE month of June for many years has led all the rest of the months for death by drowning. The total number of lives lost this year by months is as follows: January, 167; February, 208; March, 151; April, 210; May, 631; June, 1,176; July, 951. In seven months 3,555 persons in our country have been drowned.

Then to offset such an item, we clip a telegraph report from Portsmouth, New Hampshire: "During the last week the summer cottagers along the Rye Beach coast, among whom are many expert swimmers, have gathered at Wallis Sands to witness the feats performed by Mrs. Patrick Burns of Dover, New Hampshire. Mrs. Burns, who is eighty-six years old, has no equal as a swimmer at these beaches, and takes a dip in the waters of the Atlantic every fair day. The daily sea bath has been her custom for years."

It is pitifully trite to say it, but the chief cause of drowning is the not knowing how to swim. Some day it will be thought a disgrace for a youth to be ignorant of swimming in a land which has a seacoast and inland waterways.

"Why I Was Removed"

THEODORE A. BINGHAM, ex-Police Commissioner of New York City, is of an eruptive nature. In an article in the September "Hampton's Magazine" he tells of graft, the city magistrates, and the police. He says:

"Why is New York growing more lawless all the time, and why is its police control ineffective? Not the least among the causes of our lawlessness is the laxity of judges in the lower courts—the police magistrates, as they are called in New York. Eighty per cent of criminal cases in New York City are first heard in the lower courts, and between seventy and eighty per cent of the arrests made for pocket-picking, prostitution, house-breaking, blackmailing, and the vile cadet system are drawn from the alien classes, so called.

"Among the 10,000 men who constitute the Police Department of Greater New York fully eighty-five per cent are, in my opinion, honest. That is, they will not knowingly accept graft money in payment for benefits and protection which it is in their power to extend. On the other hand—and I do not believe I am unfair in this estimate—fifteen per cent, or from 1,500 to 2,000 members of the force, are unscrupulous grafters whose hands are always out for easy money.

"I am asked to estimate the money value of graft and blackmail in New York each year. Of course no one could make such an estimate with anything like complete accuracy, but my belief is that the total is not less than $100,000,000 a year.

"While less than one-fourth of the uniformed police in New York City are dishonest, the power of Tammany Hall rests and has rested for forty years upon its ability to control the police by fair means or foul. A strong, honest, fearless Police Commissioner, supported by police magistrates of ability and integrity and a Mayor big enough to conduct his office without fear or favor, can sap and utterly destroy Tammany influence in ten years or even less, provided he is empowered to dismiss and transfer his subordinates for cause, without recourse to the courts.

"During my first year at the head of the Police Department it would have been an easy matter for me to have made $600,000 in bribe money, and $1,000,000 would not have been an excessive figure at all. The only way to make it impossible for the police to protect crime is to first cease making dishonest laws; and, second, secure none but honest judges to enforce honest laws. So long as private citizens ignore the corrupt governing of their cities and make a by-word of the ballot, there can be no permanent reform, nor any cure for the grafting, bribing, blackmailing lawlessness which is eating out the heart of this Republic."

In forthright speech in an article in the September "Van Norden's Magazine" he tells "Why I Was Removed." The desire of Mayor McClellan to play politics and to use the police as pawns is the reason given by General Bingham for his removal.

"When I took the job of Police Commissioner, Mayor McClellan told me that politics and politicians would not be allowed to interfere with my work." But Mayor McClellan "became seized of the great idea that in the four years of office then before him he could obtain the control of Tammany Hall. When he tried to use the police I objected." "I received a polite request from the City Hall to send the Captain (of the East 126th Street Station) to another station."

"I asked the Mayor why he had taken such a sudden interest in the moving-picture question, and he answered: 'I am playing a little game to win the ministers.'"

"The second McClellan administration began auspiciously, but it was not long before the recount muddle had put a blight on it. I think George McClellan's actions at this time showed the character of the man better than anything else. Instead of coming out openly and declaring that he did not want the office unless he had been rightfully elected thereto, he took an entirely opposite stand. He impressed me at the time, as he must have impressed a great many others, that really he felt that he was holding on to something to which he feared he might not be entitled."

That which has never ceased to puzzle those "on the inside" is why Hearst wished a recount and why McClellan objected. That was the election when Jerome, nominated by no party, made his sensational winning run for District Attorney. On election day he had over a thousand volunteer watchers at the booths—college boys, business men, professional men. They watched the count with a lynx eye.

These men were agreed that the count in the main was a square count—not only for Jerome, but for the office of Mayor. It is hard to understand how Hearst and McClellan escaped that common knowledge.

Of most interest to students of human nature is Bingham's analysis of the Mayor's character. Occasionally hissed in public, shutting "himself up like a cave man," passing through "a long period of mental anguish," McClellan "became a pessimist of the worst type. He developed a vein of sarcasm that he thought most effective. His short, crisp remarks were made with a snap that would lead a stranger who heard him talk for the first time to believe that he was a strong man—a man whose mental poise was such that he could not be swayed, once he made up his mind that a thing should be done, or left undone."

The Discharged Sheriff

THE recent impeachment and discharge of Frank Cazalas, sheriff in Mobile County in Alabama, has probably ended the lynching practise in Alabama and perhaps in the South. When a prisoner was lynched in the heart of the city of Mobile last winter, after reports had spread all over the city that a mob would visit the jail that night and no additional precautions were taken, the citizens demanded that the sheriff should be discharged in disgrace. The Governor instituted impeachment proceedings before the Supreme Court, and that tribunal found the sheriff guilty of neglect and ordered his discharge. That set the precedent that sheriffs must protect their prisoners against mobs or lose their jobs and be put under public odium. Many of the shrievalties in this State pay from five to thirty thousand dollars a year under the fee system, and the loss of these jobs is a serious financial blow, not to speak of the public disgrace. Since the Mobile lynching half a dozen mobs have been formed to lynch as many prisoners in different parts of the State, but the case of Sheriff Cazalas had furnished the object-lesson and the prisoners in each case were protected by military or special deputy forces sufficient to defy the mobs. The result was that there were no lynchings. The prospects are that the impeachment plan has ended lynching in Alabama.

The Ultimate Car Is The Stearns

The Stearns is the dream of the real motor car lover, no matter what car he may own.

He may be content for a while with a lesser car. But his desire for the best, if he can afford it, will bring him in time to the Stearns.

For the Stearns is the autocraft of motordom. It leads so far, and has led so long, that none dispute its place.

Improvements are possible some time. We spend $40,000 per year to find them—in our experimental department.

But to build anything better, with man's present knowledge, is utterly out of the question.

Good for 60,000 Miles

The Stearns car, if properly cared for, grows better with use. It is better the second year than the first.

We win most of our races with cars which have run ten thousand miles or over.

The life of a Stearns, if not misused, is more than 60,000 miles. That is the result of perfection.

Cars that seem to be cheaper are not nearly so cheap, if you figure the cost by the year.

No New Yearly Models

Whenever our engineers work out and demonstrate an improvement, it is added at once to the car. So any buyer, at any time, gets a car of our latest construction.

Then keep it and care for it. Use it until it wears out. There will never be a car materially better, for invention in this line has about reached the limit.

Get the economy that comes from long service. Secure the full value of our costly construction. Then you will know why a car like the Stearns is worth more than inferior cars.

Where the Stearns Leads

The steel used in Stearns cars costs 25 cents per pound. It is made from imported ores.

The Stearns *The Ultimate Car*

30-60 H. P. Chassis with Limousine Body

Every important part of the car is made in our own factory—made without regard to cost.

The result, for one thing, is the safest car in the world. There is twice the strength needed where strength means additional safety.

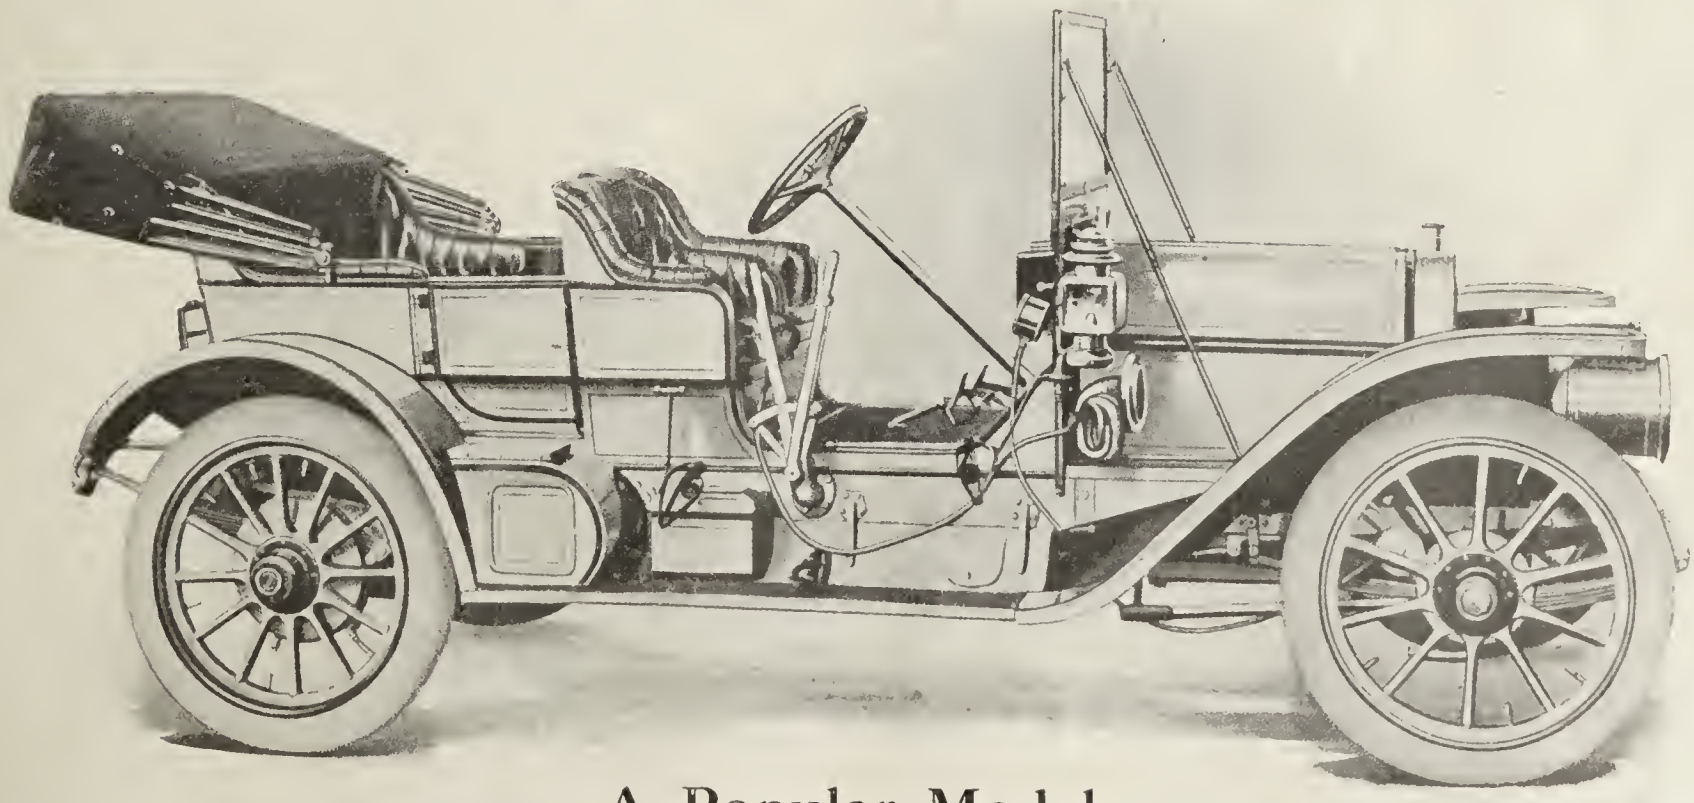
The Stearns is a powerful car, conservatively rated. Its engine is famous for a seemingly exhaustless reserve power.

The car has a double carburetor. A change from low to high motor speed brings an automatic change of the carburetor. This is the secret of the car's flexibility.

This is the Envied Car

The Stearns is a stunning car, low and rakish. There is no other car so attractive.

It is a car to be proud of—a car that excites admiration. Every man envies the owner of a Stearns.



Yet the owner knows that, in the long run, inferior cars will cost more than he paid.

If you think you would like such a car as this, please send for our latest catalog.

The Howard Watch

ASK Navy Men what they think of the HOWARD Watch.

The HOWARD has seen service—in the Civil War—the Spanish American War—

in every phase of naval activity. On battle ships—torpedo boats—submarines. In the turrets when the heavy guns were making world's records. It went around the globe with the United States Fleet and gave a splendid account of itself under the most trying conditions in the world. Salt air, fog and storm—extreme cold and heat — conditions that would ruin many a watch.

A HOWARD Watch is always worth what you pay for it.

The price of each watch — from the 17-jewel in a fine gold-filled case (guaranteed for 25 years) at $35.00—to the 23-jewel in a 14K solid gold case at $150.00—is fixed at the factory, and a printed ticket attached. Not every jeweler can sell you a HOWARD Watch. Find the HOWARD jeweler in your town and talk to him. He is a good man to know.

Drop us a postal card, Dept. A, and we will send you a HOWARD book of value to the watch buyer.

The Blockaders

The Story of the Smithtown Whisky Raids

By MARGARET BUSBEE SHIPP

¶ This is not fiction, but fact. The incidents given are common knowledge in a section of North Carolina which Mrs. Shipp has pictured as the kingdom of the moonshiners. The first of this series, "The Menace of the Still-Devil," was published August 21

THERE is no point of view older than the blockader's: "Can I not do as I like with mine own?" To turn his scanty corn crop into a more valuable commodity he regards as an inalienable right—to him the wrong is in the revenue laws, not in his evasion of them. To you this theory is untenable and perverted, but suppose you had been born a Smith of Smithtown? Suppose as a boy you had carried bags of malt to your father's still, and in pleasant, leafy hollows had stumbled across your uncle's still, and your cousin's and your neighbor's? Would you not as naturally have looked forward to the day when you were big enough to "stir the mash" as under existing circumstances you anticipated a desk in your father's office? Your wife uses the crest of her Robber Baron ancestor on her plate, or you tell your son of the daring raids of his Scottish forebears —if your grandfather had been a noted outlaw, might you not have thrilled to listen to his hazardous escapes from the long arm of the law? To live up to a reputation is an acknowledged incentive, and even to belong to the worst blockading section of the United States may give a man a certain distinction.

Smithtown is in reality not a town at all, but a scattered neighborhood in Stokes County, North Carolina. Yet from this isolated little community, since September, 1907, thirteen men have been sent to the United States prison at Atlanta, three to jail, one youth to a reformatory, while capiases have been issued for seven others, who are still in hiding.

A Whole Neighborhood Involved

FOR a long time it was known that there were illicit stills under the shadow of the Sauratown range, but as the entire neighborhood was involved, it was impossible to obtain definite information. The people had farms of a few acres in potatoes and corn, which suggested that they must gain a livelihood in some other way than farming. They were very poor, living for the most part in low-pitched log cabins. One man was marked by having substantial property, a merchant from South Dakota, who owned a store, and had nothing to do with the blockade enterprises. Jim Smith, the uncrowned king of the settlement, was also well-to-do, furnishing the supplies of meal and malt to the distilleries, which were for the most part run by men of his selection. The matter is still too recent for it to be safe to unfold the strategy by which information was obtained, but an account of a somewhat similar method may be found in the second book of "The Æneid."

It was necessary to have a large force—sixteen deputies with deputy marshals and possemen made up the number to twenty-two. To maintain strict secrecy, they started from Mt. Airy, about forty miles away, driving all night and reaching their destination at dawn. As they neared Smithtown, they divided into two parties, one under Revenue Agent Surber and Deputy Tom McCoy, and the other under Revenue Agent Taylor and Deputy Downing. Simultaneously, at each suspected house, deputies appeared and cut the bell-ropes. In the yards were big farm-bells, suspended from poles or branches, and if any stranger appeared in the vicinity, a prearranged signal from the bells warned blockaders to hide themselves, and to conceal their stills. The quickness and adroitness they show in concealing a still in ravine or bushes make a prestidigitator's magic seem tame. But though ropes were cut and two prisoners secured who were found asleep in bed, one woman nearly upset the carefully formulated plan of capture. They saw her running toward the woods, still in her nightdress, overtook her, and shut her up in an old tobacco barn. She shouted unintelligible directions, and from her cabin children fairly flocked out, and scattered like a covey of partridges. The little ones were too frightened to run far, but the older ones gave the officers a hard chase. So while the hunt went on, one disgusted man was deputized to mount guard over the tobacco barn in which were locked the infuriated woman and the "baker's dozen" of terrified children. Certainly he bore no mean part in the dangers of the fray!

The deputies proceeded to scour every foot of ground. Within a radius of three miles, they chopped to pieces *thirteen stills* seized a half-dozen barrels of whisky (fort to fifty gallon capacity each), and poure out 30,000 gallons of beer. Some of thes stills had immense fermenters and fin equipment, and were operated in building 25 by 30 feet, with substantial doors an strong padlocks. Large piles of coal an ashes showed that many of the stills ha been operated for years.

Nine prisoners were captured, but on was allowed to return home because h was old and lame.

A Battle

THE officers had separated into severa parties to despatch their work as rapidl as it was possible, and as a group of the was preparing to destroy the thirteent still, Deputy Downing went up the cree a short distance to see if he could find a other. He came upon a log house instea and afterward learned that it belonged t Frank Smith, who had been indicted fo murder in Virginia and was in hidin Two hundred and fifty yards above th house was an old field, in which gre patches of yellow broom-sedge.

Suddenly from one of these patches ca the cry: "Revenoors!" followed by a r port and a puff of smoke. The blockade in ambush, had opened fire on the deputi at the foot of the hill. Deputy Downi was the only officer on the ridge, and h position, which seemed to be one of imm nent peril, proved to be the key to t situation. He rushed back of the kitch of Smith's house, and put his gun throu the projecting ends of the notched log Every time a man fired, Downing cou shoot directly at the little patch of broc where his enemy crouched. From the fo of the hill the deputies returned a sha fire, though ineffectual, owing to the cur of the hill; but the moonshiners could n tell at what moment a flank moveme might not take place and result in the ca ture of them all. Every time they fir it meant reckoning with Downing's co and accurate marksmanship. Their bulle spit up the ground in front of him, but was out of range. One man wormed to position where he could take aim, and d liberately stood up and fired. Simultan ously Downing fired, and the man flung gun into the air uncertainly, staggered, a keeled over. Mrs. Frank Smith, watchi the fight from her door, laid her t months' baby on the threshold, and rush madly up the hill to the spot where man fell, with horrible, not human, cri Downing, who had been perfectly collect while the bullets ricochetted about h confesses that he turned cold at woman's screams.

More than a hundred shots were fi before the blockaders were driven ba from their point of advantage and d persed. When a second raid was made Stokes, a month later, Smith, his w and baby, had disappeared, and the ho was deserted.

It was not possible at the time to p sue the attacking party into the woods, it was already past noon, and imperat that the officers and their prisoners sho get out of the neighborhood unless t wished to face an all-night engagement

An Active Lame Man

WITH their prisoners marching ha cuffed, the deputies started from scene of the fray, and had proceeded ab a mile down the road when the horse of foremost team balked, frightened by women who rushed from a little house the roadside. Some of the officers jum from the vehicles to investigate, whe man ran out of the house, stumbled fell. They seized and disarmed him o loaded revolver, a repeating rifle, and ammunition belts. Whether he had sta to join the forces on the hill which deputies had just routed, or whether had intended to fire on the vehicles they passed and have revenge, though the cost of his life, he would not tell. proved to be the lame man whom they freed!

At the trial of these men it was brou out that some of the blockaders car shotguns loaded with slugs, as well pistols and rifles. In announcing sentence upon those convicted, Judge B said:

"I have made up my mind that Sm town must go out of business. It i

FOR OUTDOORING—GREAT

Fishers, hunters, campers, picnickers, motorists—all outdoorers want Underwood Deviled Ham—that is, if they want the tastiest taste to appease the gnawingest hunger—i. e., the hunger of the outdoors

Some bread, some jackknife, some Underwood Deviled Ham—that's all—and you've a lunch as tasteful as "mother used to make"—anywhere—anytime—in a minute.

Get a can of Underwood Deviled Ham and

TASTE THE TASTE

menace to the community, and *the life of no man is safe if any suspicion of not being a moonshiner attaches to him.* It requires almost an army of deputies to raid these hills, but the community must be taught they can not continue their illegal business."

To aid in accomplishing this, with a buoyant faith in human nature, Judge Boyd decided to pardon one of the men and send him back as a missionary to his comrades. The reporters stated that this man, Williams, appeared to be very grateful for the distinction accorded to him, and promised to tell the story of their brethren, who had been "bound with bands of iron and roped up like bucking steers and sent to the penitentiary." But Williams returned to moonshining as joyfully as to Smithtown, and established a blockade still the day after he arrived, giving sportive accounts of the leniency of the law.

The Traffic Goes On

THOUGH there was a second raid, in which a few prisoners were captured and the officers again fired upon, the illicit traffic continued to flourish.

In spite of the tragedy connected with the third raid, which took place December 20, 1907, under Revenue Agent E. W. Screven, it has resulted in the capture and conviction of the leaders who have long swayed the community, and in breaking up Smithtown's defiant resistance.

The raiding force had separated into three groups of five, one of which had started toward the home of Oscar Sisk, to hunt for a still. They passed a small house on the side of an old road, and stopped to search it. Deputy Marshal Millikan testified that he saw a man with a gun, who ran in the direction of Sisk's cabin, and that Deputy J. W. Hendrix followed him, exclaiming: "There he goes! There he goes!"

While the deputies were finishing their search, they heard two shots fired in quick succession. Hurrying through the underbrush to the spot, they found Hendrix lying fifty yards from Sisk's house. The bullet had severed the spinal cord, and death was mercifully instantaneous. Mrs. Sisk screamed to them: "My husband didn't do it! Jim Smith did it!"

Her story, from which she never deviated under subsequent cross-examination, was that Smith had come to the house to give warning that "Revenues" were approaching. Sisk had hurried off to hide his still—which was afterward found, still hot, concealed in the bushes about two hundred yards from the furnace. There could have been but a few moments from the time Smith gave warning until the time the shots were fired, so if it was Sisk who hid the still, he could not have been present at the shooting.

She declared that when she caught sight of Hendrix approaching, Smith, whose left hand was on the muzzle of his gun which rested on the ground, with his right hand drew from his breast pocket a blue-steel revolver. She put her hands before her eyes and turned her head as the two shots rang out. When she looked again, Jim Smith was walking off, and Hendrix lay upon the ground. She tried to give the alarm, but in her excitement jerked the bell entirely off the pole.

Smith himself said under oath that he saw a man with a gun approaching, who called out to him: "Hold on there, brother!" and that as he ran behind the stable, he heard the two shots fired. From the nature of the wound and the course of the bullet, some of the officers believe that neither Sisk nor Smith was the guilty party, but an unknown assailant, concealed in the bushes nearby. With those nearest at hand holding to various theories as to the murderer, nothing can be definitely ascertained, and the case has never come up in the civil courts.

The Capture of Sisk

REWARDS of $1,000 each for the arrest of Jim Smith and Oscar Sisk, and $500 for John Hill were offered. After a week or more in hiding, Sisk was brought in by the Nelson brothers and the reward paid them. Sisk coolly declared afterward: "They and I are friends. Ceph married my sister. I simply give up to them, and no guns were drawn because there was no need of guns. I thought they might just as well have the reward for the arrest as anybody, and when I hire lawyers, I guess they will treat me right."

Sisk's appearance was so distinctive as to impress all his interviewers:

"He is a magnificent specimen of physical manhood, weighs two hundred and two pounds, is six feet two, and has as much reserve energy as a draft horse. He has a powerful mouth, an aquiline nose, a blue eye as clear as the waters of Snow Creek, near which he was reared and doubtless makes his liquor, dark hair, and a florid complexion like a sailor's. Only in the event a man had the drop on Oscar Sisk, or wanted to commit suicide, would

"The Fountain Pen of the man who knows"

The Onoto has 12 distinct features:—

1. Fills and cleans itself in 5 seconds.
2. Cannot leak, even when carried point downward.
3. Self-regulating ink flow. Writes just as fast or slow as you wish.
4. Instantaneous ink flow. Writes at the FIRST stroke.
5. Continuous ink flow. Never MISSES a stroke.
6. Exactly-even ink flow. Never blots, splatters nor floods.
7. 14 K Gold Iridium-tipped points. Never catch nor scratch and last for years.
8. Double ink feed—one above and one below the nib. (The secret of Features 3, 4 and 5.)
9. Barrel and cap made of finest quality polished black Vulcanite.
10. No dropper, clip or special ink necessary.
11. A point, a size and a price for every Hand, every Purpose and every Pocketbook.
12. Absolutely guaranteed in every way—in construction, in material and in operation.

No other Fountain Pen, at ANY price, has ALL these 12 features.

Few have even one of them.

Yet the Onoto COSTS YOU NO MORE than the old-fashioned finger-besmearing leaky Dropper-Fillers or the new-fangled impractical Rubber-Sack and Pump-filling kinds!

Get pen-wise and get your Money's Worth!

Simply *see* and *try* the Onoto. This is all we ask. And it's all we *need* to ask, because Seeing means Trying, Trying means Buying, and Buying means *guaranteed* Satisfaction.

Look for the word ONOTO before you buy. It appears on the barrel of every genuine ONOTO—your Guide and our Guarantee.

Four Sizes—$2.50, $3, $4 and $5. 15 different style points in each size.

Sold, everywhere, by the leading Stationery, Department and Drug stores. If no local dealer is willing to supply *you*, write to us for Onoto Catalog B, names of the nearest Onoto dealers and

PAY THE

Canadian Pacific Ry.

62½c Per Acre

And Take Immediate Possession of

Wonderfully Productive

Farm Land In Southern British Columbia

Yes Sir, Wonderfully Productive land for 62½ cents per acre down and 62½ cents per acre once a year for seven years—that's the maximum you have to pay us for the land.

If you select land slightly timbered you pay in addition only two dollars per thousand for the timber which you sell, all that you use on the place is free.

At these prices we are almost giving it away, but the Canadian Pacific Railway wants YOU, not your money.

As a matter of fact that first 62½ cents is all that need come out of your pocket direct, the land itself if properly handled can be made to yield a comfortable living and pay for itself. And, when fully developed, it will yield a good living and a comfortable surplus.

These lands are suitable for general, truck, fruit dairy and stock farming.

120,112 lbs. of Vegetables From 10 Acres

Mr. D. E. Gellatley and Sons shipped from Gellatley, British Columbia, over one hundred and twenty thousand pounds of mixed vegetables in one year—all raised on ten acres of what was just such land as you can buy for 62½ cents per acre per year.

$5,030 in Fruit from 6 Acres

Mr. T. W. Stirling of Kelowna, British Columbia, sold the fruit picked in one season from 6 acres for $5,030.00.

An advertisement can't tell the whole story. But, If you men and women who are fighting a hopeless, uphill battle will send me your names, I'll see that you get good hard facts about this country of opportunities by the thousands, enough to go round and to spare.

If you have any idea that Southern British Columbia is a far off barren waste, cold and unluviting, you were never more mistaken in your life.

There is no more delightful country to live in anywhere. Let me send you the facts.

We will satisfy you that you can enjoy life and prosper in Southern British Columbia.

Then come up here and buy a 160 acre farm for 62½ cents an acre down and 62½ cents an acre a year and the Canadian Pacific Railway will hand you back half your fare over its own line of railway.

Fill out the coupon now—You'll get the facts by return mail, and you'll then know how to fix yourself comfortably for life.

he think of taking hold of the fellow to arrest him, unless Sisk happened to be found in a willing frame of mind."

Jim Smith eluded capture for more than a month, until after his child was born, and, because of supposed collusion between his captor and himself, the reward has not yet been paid.

The Smithtown leaders were indicted for conspiracy, their armed resistance to authority seeming to prove that they were banded together to resist the revenue laws, and to maintain their illicit enterprises. The case of James Smith went to the jury, who returned a verdict of not guilty, so that the cases against the others were not brought to trial.

✣ ✣ ✣

Our Friends the Spiders

By S. F. AARON

The common, little black jumping spider that preys upon noxious larvæ of many species, especially the destructive caterpillar of the tussock moth. The spider is about three-eighths of an inch long, black with white markings, having mandibles of emerald green

WHENEVER nature has planned to perpetuate a species through the ages she has also schemed to check its undue increase, rarely permitting, for any length of time, a multiplication beyond easily supported numbers. There has rarely ever been a scarcity of food, and this has not entered into the problem; she has, therefore, adopted other methods, and these have been effective, so much so that the destructive has sometimes overmatched the creative, and this often through the agency of predacious species.

We commonly think of the tiger, the shark, the weasel, the hawk, the snake as creatures that prey upon others, but bloodthirstiness is even more exemplified in the insect world by the adephagous robber-flies, hornets, long-billed assassin bugs, and caraboid beetles. And then we have the spiders, killers all of them.

It is deservedly popular to defend and extol the birds. They are beautiful things, the chiefest and best performers in nature's orchestra, and all that sort of thing, and they do a wonderful lot of good for man. But did you ever think that birds are in the insect-destruction business for their own stomachs' sake, not ours, that they are not economic entomologists, and that many harmless and very beneficial insects suit the avian palate as well and very often better than do the noxious species? This limits the good that the birds perform, and the same can be said also of all insectivorous animals.

He Does Not Bite

SINCE times prehistoric, ever since the human species developed the sense of comparison and an eye for form, all spiders, with a resemblance to the big, hairy, ugly creatures reputed to be poisonous and now generally known by the name "tarantula," have been the victims of the crushing heel.

I think it can be said that there never has been one absolutely authentic case of spider bite. The so-called spider bites received occasionally, and generally in early summer, often in bed, are inflicted by certain blood-sucking insects of several species, large and small. The mandibles of the average-sized spiders are hardly powerful enough to pierce the human skin, and all of the poison contained in an arachnid's glands, injected into the flesh of a human being, will not make as much fuss as a respectable bee sting. Moreover, spiders are not mammal blood-suckers, and wouldn't bite if they could. So much for the negative qualities of spiders.

If it were not for the spiders we should all promptly starve to death. Perhaps this is a little startling; it is none the less true. To enlarge upon it, certain spiders prey upon certain caterpillars, regularly inhabit their abodes, and kill so many of them that often whole colonies of the insects are wiped out of existence. These caterpillars normally feed upon the leaves of trees, bushes, and shrubs, frequently entirely denuding a plant. If they were plentiful enough to exhaust their common food they would turn to the weeds and grasses. Without check of any kind they would overrun the earth and destroy every green and growing thing. The spiders beautifully preserve the balance of nature.

Kill all the spiders and mankind is doomed.

UNDERFEED HEATING Proper and Profitable

GOVERNMENT experts report that only *one* in every thirty-two American homes, is properly heated. There's real cheer in knowing that *all* homes and buildings equipped with the UNDERFEED—either Warm Air, Steam or Hot Water—are not only *properly* but *profitably* heated, at a cost which represents 50% to 66⅔% *less* money than is required to run other heating plants. We would like a chance to submit proof to you that

Peck-Williamson Underfeed

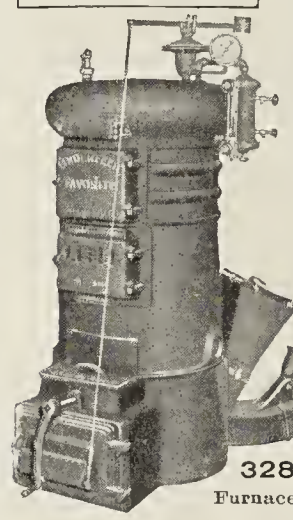
HEATING SYSTEMS

WARM AIR **Furnaces**—STEAM AND HOT WATER **Boilers**

Save 1/2 to 2/3 of Coal Bills

Smoke, soot, ashes and uneven heat—all of them sources of expense and causes of colds and discomfort—are banished by the Underfeed. *Cheapest* slack burned in the Underfeed yields as much clean, even heat, as *highest price* anthracite. Coal is fed from *below*. All smoke and gases *must* pass through the flames. They are consumed and make *more* heat. Ashes which are few, are removed by shaking the grate bar as in ordinary furnaces. Replace your old, expensive heater NOW and enjoy every *winter* UNDERFEED dividends.

This illustration shows the Underfeed Boiler.



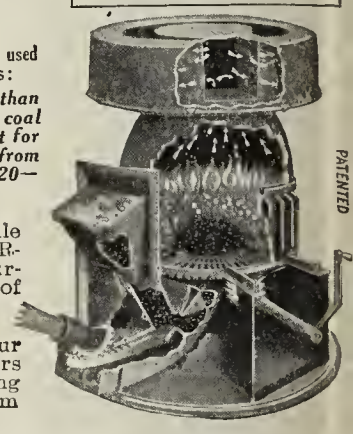


Illustration shows furnace without casing, cut away to show how coal is forced up under fire, which burns on top.

REV. B. G. HUBER, of Chambersburg, Pa., has used an UNDERFEED Furnace for three winters. He writes:

"It gave me better satisfaction this winter than ever before. I used siftings of buckwheat coal costing me $2 a ton, making my total cost for heating a nine-room, weatherboard house, from October 21, 1908, to May 6, 1909, just $20—a SAVING OF $48 for this season."

Let us send you a lot of fac-simile letters like this, with our UNDERFEED Booklet for Warm Air Furnaces, or our Special Catalog of Steam and Hot Water Boilers.

Heating plans and services of our Engineering Department are yours—ALL FREE. Write today, giving the name of local dealer with whom you prefer to deal.

THE AVERAGE MAN'S MONEY

News and Comment for Investors

Wanted—Personal Experiences

WITH a passion for concrete personal illustration, the editor of this department of COLLIER'S would like to hear from investors of average income. If you have placed money, in sums ranging from three or four hundred dollars up, in a way to bring you good returns, write and tell how it was done. Give the detailed story. What sort of preliminary investigation did you make? What bankers or brokers or agents did you consult and patronize? What stocks, bonds, or mortgages did you buy? and how have they fluctuated in price since? Whose advice was good? Whose bad? What has been the net result of your venture? If your experience was unfortunate, send on details just the same. To gather facts and ideas of interest to your mind is the purpose of this department. You can help by suggesting what to put money into, and, equally important, point out what the investor should avoid. Usable material will be paid for.

Confidence

IN THE mind of the investor a wide breach exists between the banker and the broker. One is conservative, and his affairs are subject to frequent and close inspection. The other makes his way blithely, gambling (for himself as well as for his customer) whenever he feels that the market is "right," and giving only the reputation of his firm as security that his trading is square. A few failures like those of A. O. Brown & Company, T. A. McIntyre & Company, and Coster, Knapp & Company—firms which, before the panic of 1907, had branches in many cities, large and small, where money seeks investment in securities—shake the faith of the average man.

Lately, to inspire confidence, a firm of brokers in New York has sent a circular letter and a statement of its assets and liabilities to its friends. "Those who trade in brokers' offices," the letter says, "are fairly entitled to something more than bare receipts for their deposits." The something more offered by this particular firm is the audit of a firm of certified public accountants. This complete examination is to be made regularly (probably once in three months), and at any other time that three customers, with deposits aggregating $10,000 or more, request it. "We believe," says one sentence of the letter, "that a broker is virtually a trustee or agent, and that he should not only refrain from all speculative transactions for his own account, but should keep his customers informed as to his financial standing." The volume of favorable comment drawn out by this simple announcement testifies to its need. Investors may very properly ask for credentials from the men who handle their accounts.

Wireless Stock Pedlers

JUDGING by letters that have come to COLLIER'S from Canada, California, Texas, Maine, and intermediate points, a certain wireless telegraph company has a tremendous force of stock pedlers at work. No town seems to be too small to pass by. The operations of some of the sellers of stock suggest that about all the energy and inventive skill the company can muster are being devoted to the job of scattering its securities. Wireless telegraphy is a perfectly feasible, legitimate development, and it is unfortunate that one of the biggest companies yet organized in this country should have fallen into the hands of stock jugglers.

"Electrics" as an Investment

"GIVEN intelligent technical management," says the president of the biggest bank in the country, "conservative accounting, which embraces ample charges for renewals and depreciation; fair rates, which do not offer a field for legislative attack, and I see no reason why funds in the most ample supply should not be found to absorb all the electrical power and light plant securities it is necessary to create." In the last five years the business has doubled in volume, processes have been perfected and standardized, and the problem of transmission over long distances is about solved. Instead of a gamble, the electric companies can offer the investor a reasonable assurance of satisfactory return. But every one who means to put money into electrical securities should paste Mr. Vanderlip's words of caution up where they can be read fifty times a day. Find out first, invest afterward. Twenty-five dollars paid to a lawyer in the town where the light or power company operates may save you two or three thousand dollars. As yet few of the conservative old investment houses will recommend this class of security. Yet they are very often as safe as the average railroad stock or bond, and the return is higher.

The Gage of International Fury

DURING the recent disturbances in Spain—echoes of which may still be noted in the newspapers—Spanish securities dropped in the London and Paris markets only about 2½ points. "Exterior fours," for instance, were quoted in London early in August at 94½, as against a normal price of 97. Politically, this small variation was taken to mean that the Spanish dynasty was in no real danger. Serious trouble would have sent those Spanish securities that are traded in down at least ten points. It is true, as financial writers point out, that the bankers and brokers of Europe are better able to judge the significance of events in Europe than we in the United States who have only scattered news reports. It is the business of the financier to *know*. Theorizing and guessing won't do. The fact that certain bankers in Spanish cities sent much cash and many bundles of securities across the border during the riots was not alarming to London and Paris. When the Bourbon or any other dynasty is about to fall, watch the financial markets for signs.

The Farmers' Surplus

IT IS the "Wall Street Journal's" guess that the increase in value of our crops this year over last year's total will be as much as $300,000,000. The cost of producing these crops has not much increased over 1908, so that a huge surplus will flow from the home farms into various sorts of investment. Probably a very small part will go directly to the securities markets. A heavy percentage will surely go into land—we trade most readily in the thing we know best.

Not so long ago it could have been said with assurance that the one fellow to keep clear of was the fellow with farming land to sell. "Any lie to get the rube's coin" was justified among the promoters and speculators. Their patter was the same as that employed to-day by the fake mine promoters. Even now many of the old tribe are droning their siren song in Oklahoma—the dumping ground of outworn grafters.

But the new order is generally established. It is typified by the work of an intelligent Scandinavian land agent. In Minnesota and Wisconsin these people are prosperous. They have multiplied fast and are looking for land in new sections. But they are cautious. The successful agent goes out to the Southwest or into the farther West and satisfies himself that the land he gets will be worth developing. Then, he says, "I offer them colonies. I guarantee churches and schools. I tell the people that they will need one thousand dollars for things outside the cost of the land and house. . . . I believe that if the country does not stand inspection and investigation, it is a crime to sell lands to people who can't find out for themselves." Railroad lands are no longer forced upon the dazed buyer, reckless of the man's equipment and the land's worth. That policy brought harm to the railroads. Now the St. Paul or the Burlington or the Northern Pacific or the Rock Island or the new Orient understand perfectly that one permanent, prosperous settler in a community means more business to the road than ten hypnotized investors who scratch the soil for a year or two and flit. With the use of moderate care no one need be "stung" in turning surplus money into lands.

The Best Book On 6% Bonds

We have written a book on Irrigation Bonds, based on long experience and intimate knowledge. Every investor, small or large, owes to himself its perusal. We want to send you a copy.

In the past 15 years, we have sold 70 separate issues of Drainage and Irrigation Bonds, without a dollar of loss to any investor. We are the largest dealers in these Reclamation Bonds, and they have become, in late years, our most popular bonds.

Irrigation Bonds are secured by liens on the most fertile farm lands in America. The value of the land is often more than four times the loan.

Some are municipal obligations, forming tax liens on the real property located in populous districts.

They are serial bonds, running from two to twelve years. Each year, as the loan is reduced, the security back of the rest is increased.

The denominations are $100, $500 and $1,000, so one may invest either little or much.

The interest rate is six per cent. No other large class of bonds, equally well secured, now pays an equal rate.

These bonds are bound to become more and more popular as they become better known. They are the utmost in six per cent bonds. Please send us this coupon today for our free book, so you may know the facts.

Take Out the Bristles in Strips

To Clean the Brush CLEAN

Look at your old-fashioned, solid back hair brush, even after it has been "cleaned." You'll be surprised at the accumulation of tangled bits of hair, gray dust-like dandruff scales and particles that you **can't** get out unless you wash it in hot water and doing that ruins the back.

You can clean a BY-TOWN Clean

Turning the knob releases the bristles in strips. Then every single bristle can be reached for cleaning.

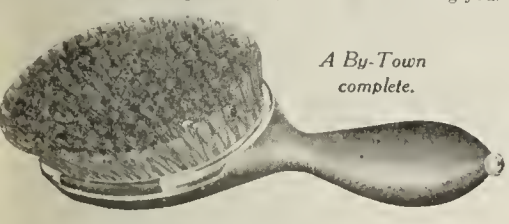
Cleaning a By-Town.

Rubbing one strip through another a few times cleans the bristles clean. Washing the strips in hot soapy water occasionally gives you a brush that is clean and **sanitary.**

The parts clamp together. There can be no looseness or rattle. The **bristles are set in wood**—no metal to turn them green.

You don't throw away a By-Town when the bristles become worn. Just slip in a new strip. Thus your brush is always new.

The **BY-TOWN** comes with the finest quality of bristles—length, color and stiffness to suit your preference. There are large and small long handled backs and military backs. The wood finishes are Golden Oak, Mahogany and Ebony. The price is from $1.50 to $2.00 a brush, depending on the bristles. Solid silver $5.50 to $6.00 (engraved monogram free).



If you have a silver back you prize, we will fit it with the **BY-TOWN** ever-lasting attachment and your choice of bristles for $4.00.

Write for booklet or, better still, send us $2.00 for a brush. You do not have to keep it unless you are thoroughly pleased. If you send the brush back, we will return your money by the next mail.

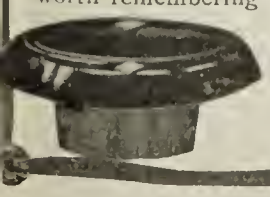
At least, write us a postal for our booklet and 30 day free trial offer.

BY-TOWN, Inc., 10 River Street, Aurora, Ill.
New York Branch: 30 Unity Bldg., W. 42nd St.

TO DEALERS: Thousands of dealers are putting in the By-Town. Write us today and be prepared to fill the demand our advertising in 20,000,000 homes will bring you.

A By-Town complete.

DIAMOND FAST COLOR EYELETS



EXAMINE

The Eyelets on the shoes you wear—See if there is a little diamond ◆ trade-mark slightly raised on the surface. If it is there you are sure it is a genuine Diamond Fast Color Eyelet and simply

"Can't Wear Brassy"

They are made with top of solid color, improve the appearance of the shoes and look bright and new, even after the shoe is worn out. They are to be found on the best shoes. Just look for the little diamond ◆ trade-mark and insist on it, as only genuine **DIAMOND FAST COLOR EYELETS** have them. It is a small thing, but worth remembering when you purchase shoes.

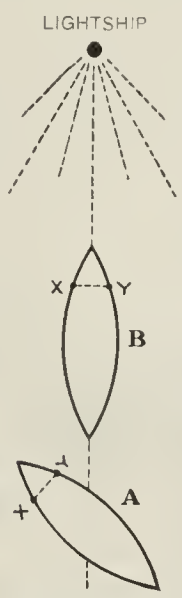
Submarine Signaling

The System Which Has Been Developed For Sending Messages Through the Waves



WHEN the newspapers told the story of the sinking of the *Republic* last year many people heard for the first time of submarine bells. The public know little of this method of subaqueous signaling which originated about ten years ago, but has come into comparatively general use only within the past two or three years. And yet through its development lies probably the solution of the one real danger remaining to steamship navigation.

A ship at sea may be lost (1) by an accident in the ship itself (a fire or a break in machinery); (2) by foundering or being driven ashore by storm; or (3) by running into something without warning—(*a*) the coast, (*b*) another ship, (*c*) icebergs, (*d*) derelicts.

Water Transmits Sound

THE dangers from 1 and 2, to a great extent, have been eliminated by naval engineering. The dangers of 3 are entirely due to lack of warning. In clear weather, in daylight, they are readily avoided. At night, so far as the coast and other ships go, the use of lights has made it as safe to navigate as in the daytime. The proximity of icebergs is known by the chill in the air and by the temperature of the water. Derelicts are systematically reported and, when possible, destroyed. As neither icebergs nor derelicts are under human control, it is impossible ever entirely to do away with the dangers they create, but these are relatively insignificant.

The chief danger at sea to-day is due to the fact that in thick weather a vessel does not receive an accurate and reliable warning of an approaching ship or of a dangerous point on the coast.

At *B* the sound is heard with equal strength in each receiver, *x* and *y*. At *A* the sound is stronger in *y*, the starboard receiver, and the helmsman steers to starboard accordingly

This warning must be transmitted through the air or through the water. The air is an unreliable medium, for it is not uniform. The most powerful lights can not penetrate fog. Sound is so deflected by the varying density of the air that when heard it does not indicate the direction from which it comes, and often skips over spaces near by and can not be heard at all.

Electrical storms and disturbances constantly vary the conditions under which wireless telegraphy operates.

Water, on the other hand, is uniform in density, and transmits sound uniformly in every direction. And sound under water is the only means that in thick weather will do what a light does in clear weather, give warning of the danger and *where* it is. By its use a fishing schooner can find its dories, an ocean liner pick up its tender or find its way into a harbor or locate its pier. After days of dead reckoning, it tells a captain where he is and furnishes a mark from which he can lay his course.

Putting Ears on a Steamship

THE fundamental theory upon which the navigator proceeds in guiding his ship by means of a submarine bell is exactly the same as that by which a man follows a sound when walking on the top of the ground. The ship is provided with "ears." On the inside of the ship, on either side near the bow, is an iron tank, the size of a bird-cage, filled with salt water. In this tank hangs a delicate transmitter which picks up the bell-sounds as they come through the water, and transmits them to a telephone receiver in the pilot-house. By means of a switch the navigating officer can listen either to the port or starboard transmitter, and when he hears the sound more clearly on port than on starboard, he knows that the bell lies to port and vice versa, and when the sound is equally clear on both sides, the bell lies dead ahead.

It is not necessary to cut a hole in the ship in order to install the receiving apparatus. The tanks are simply clamped against the skin, and the sound passes through the skin into the tank without

Heating the Home

The health of your family and the joy of living depends largely on the kind of appliances you install for sanitation, ventilation and heating

There have been as great strides made in the manufacture of scientific heating apparatus as in other fields.

Along with the telephone, wireless telegraphy and the aeroplane, modern methods of heating have been developed to the highest degree.

Through such wonderful mediums as Collier's millions of people are being educated in hygiene, in sanitation, in correct living.

The story is told to the country districts and the small hamlet, just the same as it is told to the dweller in the most palatial city apartment.

Through this knowledge a demand has been created for heating apparatus of the highest degree of excellence.

For 62 years The Richardson & Boynton Company has developed and improved heating apparatus.

Their engineers have given a lifetime of study to every phase and form of the heating question.

Exhaustive tests are constantly being made and no expense spared to achieve perfection.

In the three great forms of heating—Warm Fresh Air, Steam and Hot Water, there is a Richardson & Boynton Co. production of surpassing excellence.

To know just which form to install is often a perplexing question. Each method has its adherents and there are many good points in favor of each.

The question can be solved by Richardson & Boynton Co.'s heating engineers.

Tell us about the building you desire to heat. We will give you an honest opinion.

We will tell you exactly the plan that best suits the conditions.

We can advise the most economical, practical, consistent form of heating.

Write today and tell us:

If the system you NOW have gives insufficient heat.

If it consumes too much fuel.

If you contemplate building a home.

We will send you our comprehensive treatise "The Truth About Heating" and advise you as to the best form to install.

When your building burns —your business stops—

Can you afford to build that Factory, Warehouse, Store, Hotel or Residence with wood that burns and rots?

Can fire insurance repay you for destroyed records, unfilled orders, and lost business?

Why not put up a **permanent fireproof** building and save insurance and expense of continual repairs?

The cost is very low if you adopt the **Kahn System Reinforced Concrete.** You save 20% to 30% over the cost of steel frame buildings with fireproof floors. We can prove to you that **Kahn System Reinforced Concrete** is more economical than quick-burning construction.

Over 3,000 important **Kahn System** Buildings in all parts of the world mark the practical endorsement of leading architects and builders. The U. S. Government and world-renowned companies like the Libby, McNeil & Libby Co., Ford Motor Co., Bemis Bag Co., Burroughs Adding Machine Co., have investigated and built **Kahn System.**

The **Kahn System** brings to reinforced concrete an organized building experience and the direct personal service of skilled engineers.

Kahn System Economy and **Kahn System** Results are only made possible by use of

Kahn System Products

Kahn Trussed Bars: The perfect reinforcement for concrete beams, girders and joists.

Rib-Metal: The ideal reinforcement for concrete floors, roofs, walls and conduits.

Hy-Rib: For sidings, roofs, partitions and ceilings. Makes centering and studs unnecessary.

Rib-Lath: The stiffest steel lath for plaster, ornamental and stucco work of all kinds.

Trus-Con Products for waterproofing and finishing exposed concrete work.

Our large Engineering Department will show you how to use these products advantageously in your particular work.

Write us about your building and we will send you special catalog and valuable information free.

KAHN SYSTEM

Vacation air all Winter

You spend much time and money all Summer seeking to keep yourself and family in the outside air. The air of Winter is, if anything, purer. The reason many a family does not get the benefit of pure, fresh air all the year round is because they stick to stuffy, ashy, gas-laden, old-fashioned heating methods.

AMERICAN RADIATORS & IDEAL BOILERS

warm the air as fast as it comes in and just where it comes in. The Hot Water or the Low-Pressure Steam is gently but surely piped to the AMERICAN Radiators that warm the cold air as it flows under, through, over and around them. The force or direction of wind, or intensity of the cold, does not matter. There is Summer warmth throughout the whole house on the most tempestuous of Winter days.

IDEAL Boilers do not merely "burn coal"—they develop its **full** heating energy—and distribute **all** the available heat of the fuel through the AMERICAN Radiators to the rooms to be warmed.

Whether your cottage, house, store, building, church, etc., is OLD or new, farm or city, do not delay investigating this best **investment** feature of any building. Saves fuel, labor, repairs—gives greatest comfort, protects the health and insures household cleanliness, safety and durability. Just the season to get the services of the most skilled fitters—now, **before** winter; not **then**, when it's here.

A No. 3-22 IDEAL Boiler and 600 ft. of 38-in. AMERICAN Radiators, costing the owner $255, were used to Hot-Water heat this cottage.

A No. 22 IDEAL Boiler and 240 ft. of 38-in. AMERICAN Radiators, costing the owner $115, were used to Hot-Water heat this cottage.

At these prices the goods can be bought of any reputable, competent Fitter. This did not include cost of labor, pipe, valves, freight, etc., which installation is extra and varies according to climatic and other conditions.

You will enjoy reading our free book, which tells lots of things about heating economies it will pay you well to know. Write for it to-day, describing kind of building you wish to heat.

apparent diminution. If necessary, a ship can be equipped while at sea, for the work consists simply in attaching the tanks, hanging the transmitters, and running the wires to the pilot-house.

The location of coast stations or stationary lightships is found with comparative ease by means of submarine bells. Twenty-seven Atlantic Coast lightships are equipped with such bells. In using a bell for signaling between ships, obvious difficulties present themselves. A bell slung overboard from a moving ship is not practical, and when placed in a tank inside the ship it loses carrying power. Experiments show that the range of a bell so placed is greatly reduced, and, although of service to slow ships, it does not send its sound far enough to give fast ships sufficient time to maneuver. What is needed is a more powerful sounder which will send the sound out through the side of the ship from a tank in the forepeak to a great distance. This is now being perfected.

Signaling from Submarines

IN THE case of submarine boats, however, owing to the fact that the bell is hung in the perforated superstructure, and its sound is transmitted directly to the open sea, it is entirely practical to signal from one to the other. The enormous value of this is at once apparent when it is realized that when submerged these boats have no other means of communicating with the surface.

By the use of codes, submarine boats can remain in constant communication with the flagship equipped with a lightship bell, and with each other. It enables them to maneuver in flotillas and to make a converging attack under water on a battleship, something entirely impracticable and far too dangerous to attempt without submarine signals. A submarine boat sunk by an accident could be located by its signals, and what would otherwise be the certain loss of all the crew might be avoided.

Practically all the transatlantic companies have equipped at least part of their fleets with submarine signal apparatus, and they are also in use on many warships. Experiments are going on in several countries which will doubtless bring this method of signaling to such perfection that the danger from collision will be practically eliminated.

Prizes for Stories

AS THERE are now barely four weeks left before the close of the contest, it may be well to repeat, for the benefit of those of our readers who may not have seen the prize offer in COLLIER'S for July 10, that this weekly will pay one hundred dollars for the best 1,200-word account of a vacation received before October 1. For the second best article fifty dollars will be paid, and for all others that are accepted twenty-five dollars. The articles must be typewritten on one side of the paper only, and must be signed on the first page with the name and address of the sender. Good photographs that illustrate and add interest to the account should be sent as a pictorial accompaniment to the article and will really count a great deal in its favor. On its back every photograph should be described, and the name and address of the sender should also be written. Be sure to send the article and photographs in the same envelope, and do not let your manuscript exceed 1,200 words. Manuscripts and photographs intended for this competition should be addressed to the Vacation Editor, COLLIER'S, 416 West Thirteenth Street, New York City.

As was the case last year, the present competition calls for specific stories of vacations, whether in the mountains, by the sea, on the lake, on the farm, afoot, awheel, in camp, on sailboats, in motor-boats, or in automobiles—in fact, in whatever way the vacation was spent. Essays or fiction are not wanted; neither is it necessary for you to tell the whole story of your vacation. Use the twelve hundred words for a description of some part of your vacation, if this seems preferable. The more vividly you put on paper in words and in photographs the sense of joy of the summer's outing the more certainly will the story be of interest to others. Do not send sketches or drawings, these are usually unconvincing; photographs are almost always a reflection of real things.

Gillette Safety Razor

IT is a fact that a man whose face will not stand the ordinary razor oftener than twice a week can shave every morning with the Gillette—and easily—no roughness, no irritation of the skin, even over the sensitive places on the neck or under the chin.

There is no stropping or honing with a Gillette.

It is the one safe razor and the only razor that can be adjusted for a light or close shave.

The time to buy a Gillette is now.

It pays for itself in three months and it lasts a lifetime.

The Gillette, illustrated herewith, is so compact that it can be carried in the pocket or slipped in the side of a traveling bag. It comes in gold, silver or gun metal—with handle and blade box to match. *The blades are fine.*

Prices, $5.00 to $7.50. For sale everywhere.

You should know Gillette Shaving Brush—bristles gripped in hard rubber: and Gillette Shaving Stick—a soap worthy of the Gillette Safety Razor.

Uncle Sam's Grab-Bag

(*Continued from page 13*)

covered hills and clear mountain streams, somebody really seems to have planned it. It has gathered up more than a hundred thousand people so recently that it was able to start out with that architectural consciousness which American towns mostly lacked during the black-walnut period. Graceful bungalows take the place of the ugly frame houses of the Middle West and East, and the more ambitious houses are built into the rocks and pines with an originality and beauty which the East is just beginning to show in the suburban villas and country homes. And the noble pines and firs—which have been left whenever possible—stand out against the sky far above the roofs with an effect peculiarly exotic and impressive to eyes accustomed to the Eastern oaks and elms.

Metropolitan Spokane

IN SPOKANE you may see blackened stumps of the original forest in people's backyards and then dine with palms and shaded lights and a quivering first violinist, and, as the saying goes, "almost think you are in New York," when one has gone to vast expense to get as far as possible from New York. This is, of course, very disappointing, but it is nevertheless a fact. In the "Spokesman-Review" one day I read that "the visiting girl who was a guest of honor at luncheon selected a macaroon and nibbled it reflectively.

"'Has any one,' she demanded presently, 'remarked on the cosmopolitan character of the streets here in Spokane? The downtown streets, I mean. You know I think that corner where Howard crosses Riverside must be like a certain outdoor restaurant in Paris—the Café de la Paix—where, it is said, if you linger long enough, you will see the world go by.'" Howard and Riverside would probably not remind you of Paris, but it is romantic imagination like that which makes this Western world go round.

Boosters swarmed up from all over the West like hungry flies. Always as the crowd fought into the Cœur d'Alene trolley-cars, smashing windows and guard-rails, boomed the kindly, raucous voice of the Cœur d'Alene Commercial Club barker, not to forget to put stamps on their letters and that there was plenty of time.

"*Some* of you seem to think if you don't get on the first seat in the first car, and register with the first notary at Cœur d'Alene and come back on the first train, *this* whole scheme of registration will go wrong.

"There is no hurry, people. Cœur d'Alene will take care of you; you won't have to sleep in the lake. Take a look at our city. . . ."

Considerable editorial sympathy has been expended on the Cœur d'Alene land-seekers. I don't think they needed pity, and surely they didn't want any. They spent something, to be sure—enough often to start them well toward paying for improved land near their own homes—but they had the time of their lives.

The Strength of the New Northwest

THE vast stir and lift of the Northwest's growth was fairly rumbling in the air. Just across the Cascades were Seattle and Tacoma and Portland, with their struggle for the control of the trade with Alaska and the Orient still hanging in the balance, and a future before them scarcely yet to be guessed at. New railroads were pushing in here, there mysterious agents were purchasing vast options. New waterfalls were being harnessed; there were new schemes for carrying irrigation canals across deserts for one hundred miles. The whole inland empire is just beginning to feel its strength.

Men are wanted. They were wanted. They felt it, were told it, and read it at every turn: "Washington Awaits You," "What Walla Walla Wants Is You." Everything seemed possible. Here was a new country to be made, and they were to do the making. Within another year in that virgin wilderness four thousand human family units—each with its own inheritance, its own hopes and strength, its own tasks to meet and conquer—would be living or trying to live. Romance was in the air. The man who brushed your elbow in the crowd, or the girl whose suit-case you carried from the train, might be saying good morning twelve months from now across the boundary of your adjoining claims. They may have needed a rest when they got home, and most of them probably needed to economize. But I don't think they needed sympathy.

Few waited to see the actual drawing. When the big tin cans in which the Cœur d'Alene registrations were sealed were cut open, and more than one hundred thousand yellow envelopes spread out on the platform at Cœur d'Alene, most of the home-hunters were scattered to the four winds. All the citizens of the little town,

(*Concluded on page 34*)

The Multiplication of Power

There is no higher efficiency in the world than that of the American business man.

The multiplication of *power* in a business man—if he has the ability within him—depends upon the *increased number* of people whom he can, *by personal contact,* interest in his purposes.

He does this by telephone, and the multiplication of *the telephone's* usefulness depends on the *increased number* of persons whom he can reach.

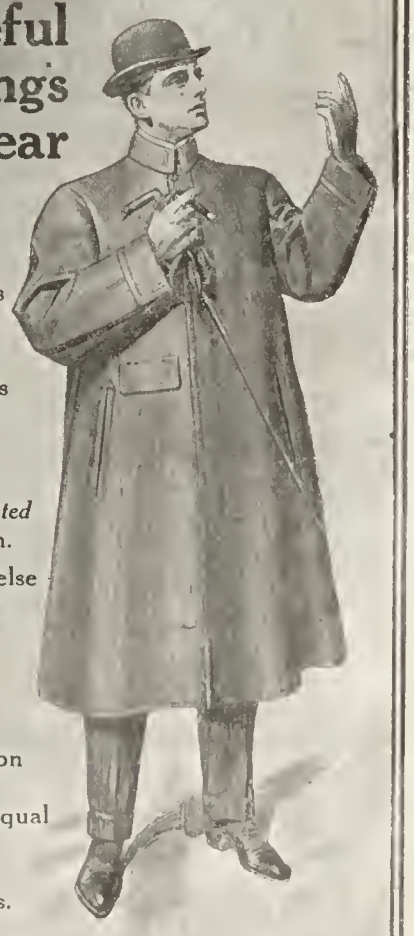
In 1890 the Bell System had 200,000 subscribers' telephones in use. As late as 1899—ten years ago—it had only 500,000.

To-day it has 4,400,000—one for every twenty persons in this country—and is increasing at the rate of 500,000 a year.

Has the vast development of industries since 1890—the greatest period of advance in the world's history—*when America has advanced faster than all the rest of the world,* been the force that has built up this great, unified, efficient telephone service; or

Has the increased ability of the American business man to bring people to him from every locality, far and near, *over the Bell Telephone System,* been the cause of the multiplication of his power and his principality?

Whichever the cause and whichever the effect, the advancement of one is inseparably linked with the advancement of the other.



The business man's Bell Telephone, with its long distance and emergency advantages, is his most precious asset next to his capital itself.

The Bell Long Distance Telephone means as much to the home as it does to the office. It is the most marvelous convenience of modern times—if not all time—added to home life.

BOYS

In choosing a school for your boy select one where the development of character is uppermost and where mere "book learning" is not considered real education.

Peddie Institute

is an academy of high rank in both scholarship and moral tone. It is an endowed school for 200 boys. Its equipment is modern and the teachers are specialists. Prepares for all colleges, technical and medical schools. Strong, practical business course for boys not going to college. Music. Sixty acres campus, athletic field, gymnasium, swimming pool. Healthful location. Rates $375. Lower school for boys 11 to 14 years. Forty-third year opens September 22, 1909. Any boy going away to school will be interested in our little booklet, "A Day's Work for a Peddie Boy," sent upon request.

Principal, R. W. SWETLAND, Box 9 M, Hightstown, N. J.

BOYS

"He Passed Successfully"

or "*He entered without a condition*," is the report always heard about graduates of the Groff School. This school has won its wonderful success by its individual method, the individual student and not the class being the unit. Bright boys are prepared for college in remarkably short time, while those that are backward are taught to study properly and treated individually.

If a boy is timid or nervous he is encouraged. If he is careless, interest in his studies is secured, and if he does not know how to apply himself he is taught.

THE GROFF SCHOOL

228 West 72d St., New York

is an ideal boarding and day school for boys. The school home is a most modern and complete building, on one of the best streets in the city. The finest accommodations are to be had. Wholesome sports judiciously encouraged, and athletic facilities the *very best*. For catalogue and copies of testimonials address the Principal,

JOSEPH C. GROFF (A. B. and of Class 1893, U. S. N. A.)
228 West 72d St., New York

MILITARY

New Jersey Military Academy

A Military Academy *without the reform-school features* which so often accompany the military system.

Prepares for West Point, college or business. Modern equipment. Gymnasium, athletic field. Rates $450 to $500.

Situated halfway between New York and Philadelphia, in the beautiful, quiet village of Freehold.

Same management, but several blocks distant, the

Freehold Military School

For Boys 8 to 14

A home school in which the military system is modified to meet the needs of young boys, dispensing with its more severe features, yet retaining the invaluable military precepts of promptness and obedience.

Modern equipment. Gymnasium, outdoor sports. Rates $400 to $450.

In the past thirty years of the school's history it has not had a case of serious illness.

For catalogue of either school, address

Major Charles M. Duncan, Freehold, N. J.

THE AMERICAN RUGBY

ST. JOHN'S MILITARY ACADEMY

(EPISCOPAL)

St. John's is famous for the *esprit* of its students and the loyalty of its graduates. It has won a national reputation for the thoroughness of its scholastic work, the excellence of its military instruction and the perfection of its physical training. It is rated by the Government as a military school of the "A" or first class. Its equipment is unexcelled. Address

ST. JOHN'S MILITARY ACADEMY (File X)
Delafield, Waukesha Co., Wis.
CHICAGO OFFICE—1515 Masonic Temple.

New York Military Academy

Cornwall-on-Hudson, N.Y.

A Technical Preparatory School

Organized and splendidly equipped for the work of preparing boys for College, the great Engineering Schools and business life. The academy is conducted on a thorough military basis, has been famous for years for its firm and successful discipline, and is ranked by the United States Government in Class "A", the highest grade of military schools under government supervision. **Cavalry** detachment under an officer of the U. S. Cavalry. Full military band. Separate department for young boys with the best equipment in the country. Located in the Hudson River Highlands, four miles from West Point, a region world-renowned for its beauty and healthfulness. Beautiful athletic field with every facility for all healthful games and sports.

For catalogue apply to The Adjutant.

BLEES

The best equipped MILITARY ACADEMY in the country. Fire-proof buildings. A thousand acres of ground. Superior athletic facilities. Large corps of instructors. Certificate admits to colleges and universities. Fall term, September 22, 1909. Catalogue.

The Blees Military Academy Company **Macon, Missouri**

Wenonah Military Academy

WENONAH, Glouceater Co., N. J.

An ideal academy for well-bred boys. Ranks with the highest schools in scholarship, moral environment, character building and physical training. Prepares for leading colleges and business. Modern equipment. Sleeping quarters with single rooms and special comforts. Extensive new gymnasium. Athletic Field of eight acres. Quarter-mile cinder track. University-trained faculty. 10 miles from Philadelphia. No saloons or factories in the town. Apply for catalogue to

MAJOR JOHN R. JONES, Superintendent, Box 104

St. John's College Annapolis Maryland

Established 1696. Classical and scientific courses leading to degrees. Designated by the U. S. Gov. as one of the six leading military colleges. Also Preparatory School for boys. Military department under army officer. Terms $300. For catalogue, address Registrar.

MISSOURI MILITARY ACADEMY

Educates the Whole Man! Select, limited, thorough. No FAILURES. Ideal school for nice boys. Catalogue will interest parents who desire the best for their sons. Applications not considered after the limit is reached. Address

COL. W. D. FONVILLE, Mexico, Mo., Box A-15

OHIO MILITARY INSTITUTE

Ten miles from Cincinnati. High, beautiful location. Military drill subordinate to academic work. Lower school for younger boys. Certificate admits to colleges. Athletics.

A. M. Henshaw, Commandant, Box 18, College Hill, O.

Augusta Military Academy (Roller'a School)

In the famous Shenandoah Valley. A country school with modern equipment. Electric lights. Steam heat. Gymnasium in course of construction, containing bowling-alley, swimming-pool, etc. Experienced instructors. 35 years of successful work. For catalogue address

FORT DEFIANCE, VIRGINIA

Tennessee Military Institute

Sweetwater, Tenn.

On main line of Southern Ry., in mountains of East Tennessee—**the Switzerland of America.** Delightful climate. Outdoor exercise. Health record perfect. Thorough work. Small classes. Individual instruction. Safe, healthful recreation in mountains. Encampments, cavalry trips, practice marches. Manly athletics. Fine athletic field. New buildings. Modern equipment. Steam heat, electric lights, pure spring water in every room. Hot and cold shower baths. Cadets from 35 States, Connecticut to Texas, Pennsylvania to California. Prepares for college, government academies or business. ***Terms $300.*** Illustrated catalogue free. Address

The Anderson Manufacturing Company, Dept. 16, Elyria, Ohio

however, gathered round the platform and listened to a fatherly address by Judge Witten of the Land Office. Then a little girl in a bouncy white dress tripped out to the middle of the pile of envelopes and picked out one. It was opened and read:

"Isadore Selig of Myrtle Creek, Oregon, 27 years old; height, 5 feet 8 inches; weight, 145 pounds."

A Week of the Cumbersome Ceremony

THE telegraph keys began to click; over in Spokane they started to set up an extra, and Mr. Isadore Selig of Myrtle Creek, Oregon, at once became more famous than he had probably ever been before. Most of those that followed were from this Northwest neighborhood. With No. 7, Miss Maude Sharpe of Martinsville, Illinois, brought in the Middle West. Minnesota, Missouri, Ohio, Oklahoma, Kansas, and Iowa came lagging in, and the fiftieth number fell to John Dindinger of Gelienople, Pennsylvania.

For a week this quaint and cumbersome ceremony continued, and even then, of course, only a small fraction of the envelopes had been opened. The others were taken to Washington, there to be alphabetically arranged and compared. Any who have registered twice for the same reservation will be barred, and a considerable reserve must be kept to fill the places of those who never attempt to file on their claims.

✣ ✣ ✣

John Smith Borrows $20

(Concluded from page 14)

gether with the costs of collection (any sum from $1 up) will be taken from his pay envelope next Saturday. *And the employer will find out that John Smith owes money to Tolman.*

Now here is a curious, usual thing about employers: Though they themselves run their business largely on borrowed money, they will discharge a low-paid employee who gets into debt. John Smith knows this, or soon finds it out—on inquiring among his fellow clerks he discovers that a dozen of them are in the clutches of Tolman and the other sharks, and their greatest fear is that the "old man" will find it out. Without this tacit, strong assistance from the employer, the average loan shark would find his trade a hard one to follow. Of course his charges are usurious beyond the wildest definition of usury. His trade is outlawed. But the law bothers him very little—legislation against him is hasty and crude, and the officers who are charged with enforcing the law tire easily. Public interest can hardly be aroused except through the newspapers (which carry the advertisements of Tolman, Masters, Stratton, and the rest, paid for at a high rate), and, when once aroused, dies out quickly.

But let an employer become known among the sharks as a man who will protect his employee from usurious exactions, and the number of victims in his firm will promptly fall to 0.

The Final Reckoning

THE transaction between John Smith and D. H. Tolman is closed at the end of the twentieth week when the last $2.50 is paid. Tolman has loaned $30 in that time and received $50. If John Smith has learned his lesson, he will live on rye bread and yellow cheese and house his family in one room before walking into Tolman's office again.

John Smith is a typical borrower and D. H. Tolman is the king of the salary-loan tribe. There are other sorts of victims in plenty—the unmarried "sport" whose money goes to the poolrooms and poker clubs, the young man or woman who borrows vacation money or money for Christmas shopping, married men whose borrowings do not go home with them. Men and women borrow money from the usurers for as many reasons, good, bad, foolish, wise, legitimate, or illegitimate, as they earn it.

This ending to the story of John Smith is a fortunate one. Often it is tragic. It is plain tragedy when John Smith loses his job; it is embroidered tragedy when the process of skinning him is drawn out by continual new loans and the victim is shuffled from one shark's office to another; and it mounts to high tragedy when the victim deserts his family and flees from the shark's persecutions or blows his brains out.

A possible ending to the story might have been a settlement in court (that is extremely unlikely, for the shark is wary of courts). Or John Smith might have had the good sense to go to the Legal Aid Society in Our City, or to a reputable lawyer, almost any of whom will help him free of the tangle for a nominal fee, or for none.

¶ The next article will discuss some of the magnates of the loan business and their methods.

Shake Into Your Shoes

Von Bergen, the Coin Dealer, Dept. C, Boston, Mass.

ZODENTA

A PRESERVATIVE FOR THE TEETH

I regard the two great crimes against the teeth as, first, neglect; second, the use of the wrong dentifrice. Which of these is the greater I know not—but this *I do know*—that the use of the wrong dentifrice is practically the same in result as neglect. Necessarily the requirements of the teeth are neglected if what is required is not used, unsightly appearance and heavy dentist's bills then follow.

Because a dentifrice is put up in an *attractive package* does *not* constitute it as a proper *cleansing agent* for the teeth. For much harm to the teeth may lurk in the contents of that package; it may not be positive harm but it certainly does negative harm if it delays use of a proper corrective, for delays often are dangerous.

Chemical agents that may eat or destroy that vital enamel, cellulose matter that may scratch it and leave abiding places for germ life to cause decay and discoloration.

These and many other agents of teeth distress may be contained in the package regardless of its beauty.

Now, I put my Zodenta tooth cream up in a good, honest collapsible tube.

The tube is attractive, but it's only a container after all.

It's the Zodenta in the tube that I spend my time on—that I make good for Zodenta is for the teeth and *must* do them good and not harm.

Let me tell you just a few things I do to insure the superiority of Zodenta.

The ingredients are the *very best*, by our process the paste cannot form at all if there exists any lack or defect in any article used.

I mill or grind them until they can easily sift through fine silk.

Then I mix them together and in retorts under a temperature of from 350 to 400 degrees Fahrenheit they form a true and inseparable combination.

That's why in Zodenta there are no acids, no cellulose, no injurious ingredients.

That's why Zodenta doesn't break up into separate ingredients, such as water, chalk, wintergreen, oil, etc.

That's why Zodenta doesn't cake solid as stone in the tube.

I'm proud of Zodenta—I have every reason to be. I have so much confidence in Zodenta as being the most superior tooth cream that I will do this:

If your druggist doesn't carry Zodenta, send me 25 cents for a large 2½ ounce tube. I will mail it to you promptly and if it does not bear out all the claims I make for it, return to me, no matter how much you use, and I will refund your money.

That's fair, isn't it? Write today.

FREDERICK F. INGRAM, 59 Tenth Street, DETROIT, MICH.

"ASK THE MAN WHO OWNS ONE"

Packard Motor Car Company

Detroit, Michigan

Raising the Electric Carriage to New Heights of Efficiency and Elegance

THE *Detroit* ELECTRIC

THERE was never an electric carriage like this before.

The best of the type, hitherto, have merely pointed toward perfection—the **Detroit** Electric has attained it; and revealed new delights and new possibilities.

The electric carriage is widening its sphere of usefulness every day and numbering new admirers by the hundreds—and the concentration in the **Detroit** Electric has hastened that result.

Detroit Electric ownership—lists in almost every community constitute a sort of social calendar which includes the majority of discriminating buyers in that particular place.

And this turn of the popular tide toward the **Detroit** is reasonable and logical—this carriage actually does embody a degree of elegance and efficiency hitherto unattained.

For instance:—

The **Detroit** gives mileage and speed higher than any other car. **Detroit** owners average 80 to 100 miles per battery charge, and accept this excess mileage as a matter of course.

The mileage range is greatest for the least battery upkeep.

The frame is pressed channel steel, with each side of one piece.

Instead of loading the rear axle with the dead weight of the motor, the motor is mounted on a subframe underneath the body, with double chain drive.

All upholstering and interior trimming in heavier, higher grade material than used in other

Seat cushions are from one to four inches deeper.

Doors open forward instead of back, and are larger.

All windows are larger and of the highest grade of plate glass.

Metal trimmings are all silver finish.

These are features found only in the **Detroit**; and there are nearly 50 more.

If you intend purchasing an electric, write for the **Detroit** literature before you decide on the make you will buy.

The largest factory in the world devoted t… ture of electric carriages—the Detroit

Facts From Ford

OF VITAL IMPORTANCE TO AUTOMOBILE BUYERS

Model "T" Touring Car, $950.00
Includes Magneto and $135.00 Worth of Equipment

There is a tendency on the part of the uninitiated to refer to the Ford car as a small car in the design and building of which, on account of the remarkably low price, the minimum of size and weight has been observed. To correct this impression and as proof that the reverse is true. the following facts are submitted:

Model "T" Coupe, $1050.00

FIRST FACT: Light as the Ford car is, 1200 lbs., it is no lighter in proportion than a passenger engine of the accepted highest type. The 5000 H. P. Pacific type locomotive used on the Pennsylvania Lines West weighs 53.8 lbs. per horse power. The Model "T" weighs 53.3 lbs. per horse power. Each is designed by an engineering expert for passenger service. On the other hand, the average freight engine, as well as a large proportion of automobiles, weighs from 85 to 110 lbs. per horse power. Note the difference?

SECOND FACT: Tho the tires on the Ford are small in actual inches and so cost less to replace, they are in reality the largest tires used on any automobile. Tire size is only large as compared with the load to be carried. For each pound of Ford car there are 2.33 cubic inches of tire. On no other car manufactured is the tire size larger than 2 inches for each pound of weight. There is some importance to this.

THIRD FACT: The horse power of the Model "T" tho rated as "twenty" is greater than the average "thirty" and equal to some of the "forty" cars. A "thirty" weighing 2100 lbs.—a much lighter weight than the average "thirty"—has one horse power for each seventy pounds. The Model "T" develops one horse power for each 53.3 pounds of car weight. Horse power has no significance except when compared with the load to be carried—you'll agree with us on this.

FOURTH FACT: The size of brakes is an important consideration. Lives are often at the mercy of the braking possibilities of a car. Brakes scientifically designed are proportioned to the load they must control, the larger the load the larger the brakes. The total braking surface of the Model "T" with its dual system of braking is 6.1 square inches per pound of weight. The average of other cars is in the neighborhood of 5.1 square inches. One of the heavier cars in the New-York-Seattle Race had to rig up a drag to hold back on the grades. The winning Ford car didn't have to for the reason just given.

QUALITY FACTS: Quality, not quantity, makes strength. Light weight is expensive, not cheap to build. Commodore Vanderbilt, that giant of railroad development, once offered a carriage builder $1000 for each pound by which he was able to reduce the weight of a buggy. It is a mistake to consider low price as a result of light weight or that light weight is a result of low price. Low price results from know-how, from specialization, from quantity buying and producing and from system in production and selling. Light weight is the result of Mr. Ford's conviction that quality and design, not quantity and cast iron, are essentials of strength.

MAINTENANCE FACTS: There are some items though, which in connection with the Ford light, low priced car are small in comparison with similar items for high priced, heavier cars. Repair bills are smaller; fuel bills are lighter; tire costs are less. A Model "T" costs less to maintain per month than a horse and buggy. A gallon of gasoline is enough for 22 to 25 miles; a set of tires lasts 8,000 to 10,000 miles or more and repair parts are low priced and easily installed.

DURABILITY FACTS: It is another mistake to consider a light car as being unsuitable for heavy roads. A traction engine needs a mighty smooth road, yet a traction engine is nothing more than a heavy weight automobile. Over any and all kinds of roads the Model "T" will run more miles, more days, more years than any heavier car manufactured—and it is the lightest of them all. A Model "T" Ford, a duplicate of the Ford car for 1910, won the New York to Seattle Race, the hardest, toughest, most gruelling contest ever run, beating from start to finish all the high-priced; high-powered, heavy-weight competitors. Light weight was very largely responsible for that. ("Winning the Transcontinental" will be mailed upon request).

SPECIFICATION FACTS: A Vanadium steel, four cylinder, twenty horse power, 1200 lb. car; Ford magneto built in as a part of engine, no brushes, contact points, moving wires or batteries; thermo-syphon system of cooling; new design planetary transmission, silent, easy and long lived; combination splash and gravity oiling system without oilers, lubricators or piping; three point suspension, unit construction throughout and only three units to entire chassis; and interchangeable bodies. These and other up-to-date Ford features described in catalog.

PRICE FACTS: Touring car at $950.00, Tourabout at $950.00, Roadster at $900.00, include top, automatic brass windshield, speedometer, gas lamps, generator, three oil lamps, and tubular horn. For unequipped car with oil lamps and tubular horn only, deduct $75.00. The Coupe at $1050.00, Landaulet at $1100.00 and Town Car at $1200.00, include three oil lamps and tubular horn.

These facts are here detailed for the enlightenment of intending automobile buyers. Each fact has already been proven and will be for you if we are given the opportunity. Compare them, fact by fact, with statements and claims of other automobile manufacturers and decide for yourself whether you are justified in buying any car until you have carefully investigated the Ford. Have the nearest Ford dealer supply a car for a demonstration. If you do not know his address write us for it. Then decide on actual comparative merits—we will abide by your decision.

Every Model "T" Ford Car is an exact duplicate of the car that won the New York-Seattle Race

Ford Motor Company

want to tell you why the Maxwell offers the greatest value for $1,500. The reasons below must be clear to every thinking person. Won't you please read why?

Benj Briscoe PRES.

"Maxwell"

Perfectly Simple — Simply Perfect

Four Cylinder 30 H.P. Touring Car

An even better car for $1500 than we could build last season for $1750. Longer wheel base, larger wheels, more powerful engine, a big, roomy, stylish body. We give you without extra charge a magneto, gas lamps and generator—over $150 worth of extras that you pay for in other cars.

$1500 and Even Better

This for $250 Less

A car even better than our four cylinder 30 H.P. of last season at $1750. A car even better than the model which ran 10,000 miles over country roads without stopping its engine. A car even better than the MAXWELL that was driven by Mrs. John R. Ramsey and her three women companions from New York to San Francisco A car even better than the MAXWELLS which won first and second places in class D of this year's Glidden Tour. In short, a car that combines MAXWELL reliability with style, comfort and luxury.

Where We Have Added Value

We have increased the power of the engine 17%—although we rate it 30 as last season. We give you 34 x 4 inch tires—this means economy. We have changed the rear spring suspension from semi-elliptic to ¾ scroll—this means more comfort. We have lengthened the wheel base 4 inches—the body is longer, the rear seat wider. These changes add to the easy riding qualities of the car. The magnificent new body gives it style—yet you save $250 on a better car.

This $250 Saving Is Cost Reduction

Our plants have been enlarged—that's why. The number of cars that we build, doubled. We have added new automatic machines, some costing as high as $20,000. This equipment and production has reduced manufacturing expenses to a minimum, while our selling and overhead remain the same. This has made a difference of $250—that saving goes to you.

Mechanically Right

Our new model incorporates those mechanical features which have made MAXWELL and Reliability synonymous. MAXWELL features are recognized by all automobile engineers as standard. The 3 point suspension—unit construction—disc clutch—thermo-syphon cooling—straight line shaft drive and metal bodies are principles that have been copied by makers of the highest-priced cars, yet no car combines all except the MAXWELL.

What Do Owners Say?

The real test of an automobile is the verdict of the man who owns one. MAXWELL owners tell us that no car is so economical to keep. Read what this one says—it is a sample of what over 18,270 owners say about the MAXWELL.

Baltimore, Md., Nov. 6.

MAXWELL–BRISCOE MOTOR CO.

Gentlemen:

You will be interested to know that my Maxwell has been driven at least 20,000 miles over all kinds of roads, and it is a pleasure to give it my enthusiastic approval.

This applies to its wearing qualities and general reliability, no less than to its strength of construction and simplicity of mechanism.

Yours truly

J. W. WIESENFELD.

Don't Be Disappointed

The demand for MAXWELLS has in the past exceeded the supply. Our dealers know that no other car offers as much for $1500. That's why every dealer has asked us to increase his allotment. May we send you our illustrated catalog and name of the nearest dealer who can fill your order promptly?

We Also Make

Model "Q" 4 cylinder 22 H P. runabout, sliding gear transmission, 3 speeds forward. Magneto equipped, price standard runabout $850. Three styles of body.

Our model "A.A," 12 H. P. runabout at $550 is the greatest value ever produced. Costs less to own than a horse and buggy—costs no more to buy.

SALE OF MAXWELLS TO DATE

Sold to July 31, '09	17,600
Sold during August, '09	678
Maxwells in use today	18,278

Editorial Bulletin

Saturday, September 11, 1909

The Golden Empire Number

¶ Next week's Collier's will be devoted to the progressive States of the West, giving their swift development out of the wilderness, and the great future toward which they are forging. The number will be a pictorial and descriptive album of scenes and conditions. It will also contain a selected group of Edward S. Curtis's celebrated Indian portraits, "The First Americans." These pictures are part of the remarkable collection that is being compiled in folio form under the patronage of ex-President Roosevelt and Mr. J. Pierpont Morgan, and sold for $3,000 a set. Through this form of endowment, it is possible for Mr. Curtis to continue and carry to completion the great national work of preserving for American posterity the true delineation of North America's heroic, vanishing race.

¶ There will be three poems in this issue—one by Bliss Carman, voicing the trend of the West. "Our Earth is Young" is the title of an apostrophe from the pen of George Meredith; while Rufus Steele will contribute "The Spirit of California."

¶ Among the articles will be a paper on "The Field Agent of Settlement," in which Frederick R. Bechdolt describes the work accomplished by the cowboy in building up the States of the plains and the Pacific Coast. It was these soldiers of industry who rode down the outlaws, assisted the army in suppressing Indian outbreaks, and established the peace that made agricultural settlements possible.

¶ Edmond S. Meany, author of the "History of the State of Washington," and other historical books, will write on "What it all Means," in which he penetrates the surface accomplishments of the Seattle Fair to the principles underneath. Professor Meany, who occupies the chair of history in the University of Washington, has for many years been a member of the Legislature of his State, and, in recognition of both his historical research work and his applied patriotism in the growth and in promoting the development of the Northwest, the Government has recently named one of the highest peaks in the Olympic range in his honor, calling it Mount Meany.

¶ Every inhabitant of this new part of the continent is an irrepressible "booster." Local eloquence circulates through the air. Yet this promiscuous energy is never allowed to be wasted. It is gathered up into effective volleys. It has built up the communities and cities of the West. It has transformed local jealousies and prejudices into a spirit of common helpfulness. Cities, and even States, through their representatives in special excursion trains, call on each other and return calls. They parade the towns in automobiles, banquet each other, tell how they do it, and boost. Lute Pease, editor of the "Pacific Monthly," outlines in "The Boosters" the systematic process of advertising the West.

¶ Dr. C. H. Chapman, editorial writer for the Portland "Oregonian," has prepared an article on the tendencies now to be perceived in the "Pacific Civilization." He considers the intellectual and civic as well as the material ascension of the Coast, and indicates the new type of society which is forming there.

¶ "The World's Fruit Basket," by Richard Lloyd Jones, is a descriptive story of the fruit industry which has grown up in Oregon and Washington and the adjacent States. From a scanty beginning the region has become the most extensive and prolific orchard of fruit in the world. In this story Mr. Jones describes the social as well as the economic benefits resulting from organized cooperation among the fruit growers—a plan full of suggestion for the farmers of larger acres to consider.

¶ The vital topic of good roads will be treated by Samuel Hill, in "Good Roads and the Northwest." Mr. Hill, lately an overseer of Harvard University, is one of America's leading authorities on road-building; and he has contributed generously from his private fortune to further this cause in the city of Seattle. Mr. Hill instituted and directed the recent good-roads convention in Seattle, which was largely attended by the experts of both the United States and Europe.

ADVERTISING BULLETIN

NO. 20

MAKING LIFE PLEASANTER

THE men who write books are fond of calling this the "Age of Steel." I think a better name would be the "Age of Advertising." I believe advertising has had ten times as much to do with the real progress of the human race as all the structural steel ever produced—or that will be produced.

You who think of advertising as simply an effort to sell goods, just consider where we would be without it. Your modern newspaper simply couldn't exist. The price you pay for it wouldn't cover the printing and paper-stock. Collier's wouldn't exist. An up-to-date magazine would cost you twice as much as it does now—if it were not for the advertisers.

Through advertising, several billions of good books have been distributed in the homes of the people. The railroads, steamship lines and vacation resorts, by good advertising, have taught us something about pretty much every place, and we have learned to travel. Our grandfathers never went anywhere; we go everywhere.

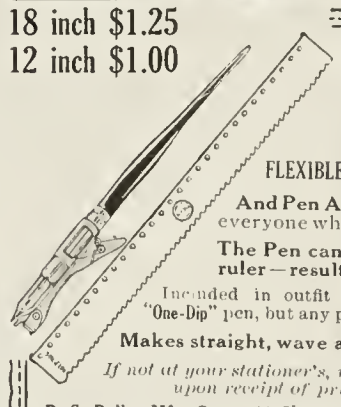
Half of what most of us know about hygiene, sanitation and physical culture, we have learned either from the advertising pages or the things advertised. Great numbers of our best schools owe their growth to steady advertising.

Magazines themselves, invaluable forces for good in our modern life, extend their circles of readers by advertising each other.

But here is the point: almost everything you can think of that has helped to make our homes pleasanter, our minds brighter, and our lives fuller of variety, has come to us because advertising provided a way through which we could be reached—all of us at the same time.

E. L. Patterson
Manager Advertising Department

IN NEXT WEEK'S BULLETIN—"Concerning the Sept. 18th Issue"



For the
Young Man

What is it about Society Brand Clothes that makes them stand out pre-eminently? What is it—assuming that all makers of Young Men's clothes use the same excellent grades of materials? There's only one Answer: It's Style—Always Style. It is the basis of Society Brand Success. Without Style, clothes are mere Mechanical Products. With Style, Clothes are everything! You may wear every model made in this country but the instant you put on a Society Brand Garment, you look Different. You Feel different. You Feel well dressed—and you Are Well Dressed; You Feel Young and you Look Young. And to all Intents and Purposes you Are Young. High-grade Materials and the most skilful workmanship, are Matters Of Course With Us, but the one great dominating feature is Society Brand Style, which is Different, Youthful, Artistic, Refined.

Try these clothes. They are sold thro' the better clothiers everywhere, but if your dealer does not keep them, write Alfred Decker & Cohn, Chicago, for Fashion Panels F. O. 9. (Permanent crease, patented, in all trousers.)

Collier's

The National Weekly

P. F. COLLIER & SON, *Publishers*

Robert J. Collier, 416-430 West Thirteenth Street

NEW YORK

September 11, 1909

The House of Mirth

THE VALUE OF PUBLICITY is appreciated by the Legislature of New York, provided it can determine the nature of the publicity to be received. As a blind to Caliban, or sop to Cerberus, it appointed a committee to pretend to gather information about direct primaries; followed a sort of joy ride aronnd America; estimated expense, $15,000; which the committee does not pay. This galaxy was composed of statesmen bitterly opposed to Governor HUGHES. They sought for one exception, for Appearances. What said the Exeeption? "Nay, friends, I will not serve. I know your little game. Your study of the subject is a Joke." The committee asked another Hughes Senator to take the rôle of Goat. He threw it np, and yet another. Therefore, with no actor in this rôle, the committee sallied forth. The witnesses are largely chosen and the questions mostly asked by one KNAPP, counsel to the committee, also intimate friend to RAINES, he who made hotels so famous. Likewise the chairman of the committee is law partner of RAINES'S son. The committee, doubtless, is appreciative of the vast traets of country over which it passes. Long will it swelter with enthusiasm over Minnesota, Illinois, Wisconsin, Iowa, Kansas; much educated must it be by the exposition at Seattle. In the home State of this committee, meantime, the study of direct primaries does not lag. Anonymous circulars are sent about, pretending to tell impartially what the Hinman-Green bill really means. "Boiler plate" is sent by the Republican State Committee to newspapers which it thinks too busy to do their own thinking. Thus mueh light is being shed upon the important question of whether the people shall choose their representatives. Some persons think the essence of representative government is that the people shall not choose their representatives. Fifteen States have mandatory direct primary laws for practically all officers; three more for all except State officers; six others for certain officers; in eleven more primaries are optional or permissive; and in others similar results have been reached, without laws, by party rules. No State, after adopting the mandatory direct primary, has ever returned to the eonvention system. Boss TWEED said: "Let me name the candidates and you can vote for them." Boss RAINES and Boss MURPHY say Amen.

Immigration

RAILROAD MAGNATE HILL seldom talks much without saying something. Canada was interested, therefore, when he warned her at Winnipeg that while she could get good ready-made citizens from our Western States, various foreigners might prove less digestible. Canada has had experiences which lend a special point to Mr. HILL'S opinions. Some good English men and women, actuated by Christian motives, and feeling sympathy for the Dukhobortsi, a Russian people who held some grievance against the Government because of religious persecution, negotiated with the Canadian Government for the transfer of a large number of these people to the western Canadian country. The Dukhobortsi came, were homesteaded on free lands, and money was advanced to them for the purchase of horses, stock, agricultural implements, and building material, and the Government furnished them with seeds. They recognized no law other than the decrees of one of their number, whom they accepted as their prophet. They have been active in many crazy ways, and it is to be feared that some Canadians heartily wish that they were back in Russia being persecuted. Another immigration scheme, that in a larger measure has proven a failure, has been the importation into Canada of a lot of the poor and stranded element of the Cockney district in London. Many of them have been sent back to London. Canada of recent years has been stiffening up her standards. How about the United States? The number of immigrants dropped last year, but it is now becoming rapidly greater. Except for Orientals and eontract laborers, our laws are very generous. They draw the line only on probable pauperism, disease, and crime. Some steamship companies are so eager for business that the Commissioner has had trouble with them even over these slight requirements. Also there are certain agencies, both abroad and here, which ought to be suppressed. Mind you, we are not discussing immigration with a view to its effect on our ideals and standards of living, but on the mere questions of pauperism, disease, and crime. Surely on those questions we should be strict. One might suppose that for such a purpose Congress, which wastes so much, would be generous. Perhaps it will be. The facilities for examining immigrants at the principal port of entry are very insufficient. Imagine the frequent conditions when only two minutes are available for the examination of each immigrant, including thirty-eight questions, with answers noted. It is a tough problem at the best. Let us at least have the fullest facilities for using the safeguards which the law intends.

Vocabulary

"*A cheap, popular, and money-making publication.*"—JOHN JAY CHAPMAN referring to the "Harvard Classics."

Mr. CHAPMAN has expressed the nature of the enterprise with pleasing and singular exactness.

China and Japan

THE RAILWAY DISPUTE between the two Asiatic neighbors has brought one fact out clearly. The Japanese are now trying to do in Manchuria what they stopped the Russians from doing. They are aiming at military eontrol, toward which the policing of a railway is a most eonvenient step. China opposed the broad gage merely because she saw the purposes for which Japan was principally interested in the railway. For the European Powers the ambition of Japan on the mainland must be a serious object of attention until the situation becomes very different from what it is at present. May it not be that the question of the Antung-Mukden Railway will never be settled right until the road is either internationalized or put into the control of China? The Chinese, it is not always realized, are expert and quick mechanics; those railways which they conduct are conducted well; the only pretext or reason for foreign control of railways on Chinese soil is financial, and that excuse may disappear before many years have passed.

Business Is Business

CONCERNING ITSELF FREQUENTLY with a defense of the rail roads, the Portland "Oregonian" attempts to achieve humor at the expense of COLLIER'S. In an editorial anent the control of steamship lines by the Southern Pacific we said that the American-Hawaiian Steamship Company carries sugar from Hawaii to Philadelphia and New York, its return cargoes consist of merchandise for California, and the ships of this company do not "touch at" any ports which have Southern Pacific terminals. To one intimate with the English language, this would mean that these ships do not make any passing calls on their voyages at intermediate points where the Southern Pacific has railroad terminals. There are points on the Gulf of Mexico—Galveston and New Orleans, for instance—which have such Southern Pacific terminals. The "Oregonian" should use its opportunities by making a more intelligent perusal of the wisdom in the pages of COLLIER'S. Commissioner PROUTY of the Interstate Commerce Commission has said that he is convinced that an agreement exists between the American-Hawaiian Company and the railroads whereby the former will build no more vessels. A Congressional Committee found that a former compact existed between the Pacific Mail Steamship Company (since acquired by the Southern Pacific) and the railroads, whereby that company, for an annual consideration of nine hundred thousand dollars, agreed to carry not more than twelve hundred pounds of freight monthly each way between New York and San Francisco. The San Francisco "Call," which is enabled by its freedom to do many serviees to the people of the Pacific Coast, notices that when the railroad freight rates recently advanced, there was at once a corresponding freight-rate increase by the American-Hawaiian Company. Underground relations have always existed, and will perhaps always exist, between these so-called independent steamship lines and the overland railroads. In any event, freight rates, both by land and sea, have advanced. The Pacific Mail Steamship Company has time and again refused San Francisco-New York freight, declaring its ship capacity overtaxed, when the intelligent San Francisco shipper knew that its ships were carrying ballast.

Accuracy

HOW IS THIS? Our honored colleague, the A. P., sends out the allegation that "the San Francisco Gas and Electric Company has accepted the confession of HARRY ORCHARD, now serving a life sentence for the murder of ex-Governor STEUNENBERG, as a perjured statement." It adds that "during his trial in Idaho ORCHARD told," etc. Now this general subject is of too much importance for loose and mistaken state-

meats to be advisable. ORCHARD did not testify to anything at *his* trial. He had no trial. He did testify at the Haywood trial. The fact, however, is that there was no issue in the California courts as to the truth or falsity of the confession. The motion for a new trial was being disposed of at the time of or shortly after ORCHARD'S arrest. MCPARTLAND would not allow ORCHARD to make an affidavit. Instead, MCPARTLAND himself made an affidavit that ORCHARD told him so and so. Of course, this was not competent evidence. It was too late, after the Haywood trial and ORCHARD had given his evidence, to use his story on the motion for a new trial, and the court was compelled to dispose of the case on the record. It could not take notice of ORCHARD'S confession on the stand, in the face of the record which was all testified to before any one connected with the case ever suspected the existence of HARRY ORCHARD. Obviously, therefore, the San Francisco Gas and Electric Company has not accepted the confession of HARRY ORCHARD as a perjured statement.

The Heney Issue

THE SITUATION in San Francisco is this: Under the California law, if HENEY had qualified as a Democratic or Republican, or a Union Labor candidate, and had been defeated at the primaries as such candidate, he would have been kept from any chance to run at the election. Had he announced himself a Democrat and become a candidate for the Democratic nomination at the primaries, and been defeated in that primary contest, he would have been out of the campaign altogether. He could not, therefore, afford to get in and make an active canvass for the nomination. He had to rely on those who wished to write his name in a blank space in the ballots of the different parties. The course he took enabled him by petition to have the citizens nominate him, and he will also have the endorsement of the Democratic Party, which is ordinarily the strong party in San Francisco. Undoubtedly one of the most vigorous campaigns ever waged by the worst element among the rich will be waged against HENEY this fall. Nor will this campaign be confined to San Francisco. It will be supported by the sympathy and sinews of the same element in different regions of the country. Now HENEY has his faults, chief of which is his habit of allowing the opposing attorneys to worry him in court. They play this trick upon him, knowing his weakness. Taking it altogether, however, HENEY seems made to order for the situation in San Francisco. When St. PATRICK drove the snakes out of Ireland—if he ever did—there was doubtless more or less hissing among the snakes. The present campaign in California shows a line-up much like what has been seen in other years. The old Ruef-Schmitz element among the labor party has joined hands with the Calhoun-Southern Pacific crowd: and what that combination means California, if she can learn by experience, already knows.

Not "City"

TO COLORADO SPRINGS, not Colorado City, belongs the bouquet we threw the other day about homes and streets. Rhetoric was maltreated by typography. Colorado City is a sort of suburb of Colorado Springs, and it is known to fame as the smelter town in which originated the strike which finally caused the trouble at Cripple Creek. Some persons who do not appreciate Colorado Springs refer to it derisively as a suburb of Colorado City. Not so the editorial we. On our various visits there we have been filled with enthusiasm, which, in verbally spilling over, got off at the City instead of at the Springs.

Genius

POPULAR SONGS! Can they sink lower, or has the bottom been reached? The absurdity lies not so much in the fact that they are un-lyric or vulgar as in vapidity. Observe a "love" song:

> "Sweet moon-bird, won't you be my moon-bird, Cherokee?
> My heart your own tepee thro' life will always be:
> And in my wigwam, fine, your eyes will softly shine
> With lovelight all the time, sweet moon-bird mine."

Or, for your chastisement, take this:

> "Pony boy, pony boy, won't you be my Tony Boy?
> Don't say no, here we go off across the plains:
> Marry me, carry me right away with you.
> Giddy up, giddy up, giddy up, whoa! My pony boy."

This is a chorus:

> "Honeyland! Honeyland! Together we will wander in that sunny land.
> Happy we'll be, just you and me, sipping honey underneath the sinmon tree:
> Honeyland! Honeyland! We'll need no money, honey, in that sunny land,
> Spending all our lives living in the hives, in Honey, Honeyland."

The music, to conceal the quality of these, must in truth work hard. Many of the songs which aim to provoke the laugh rather than the throb are little better. A few of both kinds have quality. A larger number play upon easy springs in human nature, and while they may help the human race to pass its time with a certain sort of pleasure, they do not push it along on its progress toward the stars.

County Fairs

FEW MORE SHOP-WORN topics exist than the county fair. That a reader, like a "sucker," is born each moment, is the only ground for thinking the venerable theme may still be worked. Buck up, O [illegible], and [illegible]. The season is at hand. In the absence of statistics, it is safe to say that the county fair, in rural counties at least, is as great an institution as ever it was. It is different, but only in detail. Those who can remember back thirty years can recall the time when the great attraction at the county fair was the high-wheeled, nickel-plated Columbia bicycle, with its little short handle-bar and its daring rider in skin-tight knee-breeches who circled the half-mile track at what seemed terrific speed. The bicycle was so new an invention that no two people agreed on the pronunciation of its name, which now is partly true of the aeroplane, that instrument which, if not this season, then next year, will replace the dirigible balloon as a county fair "attraction." We had never dreamed of automobiles then, and now the county fair is a mart for the sale of these vehicles to the farmer, who is losing his attachment for the red-wheeled, side-bar buggy. "Machinery Hall" in the old days—they got the name from the Philadelphia Centennial—was given over largely to exhibits of various horse-power devices, primitive mowing machines, treadmills, and "side-hill" plows. The self-binder had not come into use. Now they show gasoline engines adapted to every phase of farm activity, cream separators that jerk the butter fat out of the fresh milk, and scores of devices that the farm boy of thirty years ago would find it impossible to guess the uses of. Then they hitched the trotters to high-wheeled sulkies, like the one in the old lithographs of Budd Doble of "catarrhal name." Now they race on a couple of rubber tubes filled with air. The upright piano, with or without an automatic playing device, and the phonograph have replaced the melodeon and the cabinet organ in "Music Hall." Battenberg lace and stenciled draperies have crowded the patchwork "log cabin" and "crazy" quilts to the wall in the department of home industries, and the advance in a nation's artistic taste is shown in the exhibits of amateur photography which have taken the place formerly occupied by stiff "still-life" water-colors and cardboard "mottoes." But the spirit is unchanged. The same good-natured rivalry and pride in the products of one's own farm, garden, orchard, poultry yard, or pasture exist, whether the product be rutabagas or sugar-beets, cabbage or kohl-rabi, Baldwins or Black Ben Davises, Plymouth Rocks or Rhode Island Reds, old-fashioned Alderneys or modern Dutch Belted. The neighborly emulation is as strong a motive force for progress now as it ever was. To-day, as in the '70's, the county fair is more than a merrymaking. It is the rallying-ground for home, village, and farm, and its prosperity means the health of our rural population and resources.

Germans

IMAGINE, IF YOU PLEASE, the suburbs of Los Angeles on a hot August Sunday afternoon. It is like an oven out there in the hills. The country is still waiting for the rains, the eucalyptus and pepper trees droop, gray with dust. Into a hollow in the hills troop perhaps five thousand—sturdy husbands, placid wives with ample bosoms, little children with tow hair and light blue eyes. It is their Schnetzen Park, and these Germans are about to celebrate the victory of their ancestors over VARUS and the Romans in the Teutoburgerwald some nineteen centuries ago. That is a long time, but the Germans have good memories for such things. There were perhaps 15,000 Germans and 34,000 Romans in the original battle. To-day there are only about a dozen Romans and perhaps twice as many Germans. JOHN GOETZE, in a blond wig and flowing yellow whiskers, represents Hermann, the German chieftain. FRANK DONNER, in pink tights, gilded armor, and a helmet, is Varus. JOHN has a hard time of it because his horse doesn't like the smell of the coyote skins in which JOHN is clothed; Varus's helmet keeps tumbling off. The soldiers, too, more interested in action than in historical accuracy, insist on pulling out revolvers and firing blank cartridges in each other's faces. But the Germans finally win and old Varus is magnanimously led down the hill and over to the refreshment kegs. The Kriegerverein parades and the singing societies fill the hot resounding hills with their deep-chested songs. Then, while the band plays for the twentieth time "Die Wacht am Rhein," the crowd troops back through the dust to the trolley-cars and home. They are a wonderful people, the Germans. All peoples are wonderful. And this is a wonderful and very entertaining world.

Farce?

A LOS ANGELES WOMAN telephoned to the police in the dead of night that a drunken man had taken possession of her front porch and she didn't know what would happen next. To the rescue sped a policeman, night stick in hand, his honest, square-toed shoes beating a tattoo on the empty sidewalks. Arrived at the besieged front porch, he found the man mumbling strange noises, the lady behind the bolted door in hysterics. Picture the ensuing scene, all as rapid as the rapidest comedy on the stage. The door is opened, the honest patrolman gripping the intruder in one hand, supporting the lady in the other. The light is turned on when—"Oh, Mr. Officer, please don't hurt him. He's a friend of my husband!" Curtain—behind which we may imagine the discomfited officer returning to report "No case" to his desk sergeant, the erstwhile intruder become suddenly a guest. The world is not only a stage for the larger dramas, but its lesser doings fall often, with quaint accuracy, into the set forms of written comedy and farce. It is strange that with so many plays being acted all the time it should be so hard to write one. In art, however, opportunity is always present, but talent bloweth where it listeth.

Some Outdoor Americans on their way back to the little red schoolhouse

THE VIEWPOINT

Ideals and Dollars

WE AMERICANS have a mortifying habit of resting on the laurels won for us by our forefathers and smugly pointing the finger of scorn at the frailties of nations hoary in the experience of living while we were yet an unborn people.

We are, in fact, so busy finding the mote in the eyes of our neighbors that we entirely overlook the beam in our own. Which is rather a pity, considering the number of them we possess and the difficulty we experience in trying to persuade others that we are not quite the hypocrites we seem. For we do desire to stand well in the eyes of the world despite loud and vainglorious denials to the contrary.

This desire of ours, legitimate and logical, will, I fancy, prompt some of us to try to explain the attitude taken by our Government in the matter of the confiscated aigrettes; but, alas, it will be impossible to satisfactorily explain the flagrant disregard of the New York State law, which orders burned all such plumage confiscated in its name. We shall, as usual, lay the blame for these mysterious doings on the shoulders of a mythical Uncle Sam and his officers, completely ignoring the fact that Uncle Sam is you and I and the other fellow; that his officers are put there by ourselves; that their greed represents our greed; their cupidity our cupidity; their shame our shame. And what a burning shame it is that we should have so far fallen from the ideals of our fathers (who in founding this nation meant that America should for all time represent right, truth, and justice) that the miserable dollars brought by the sale of the plumage from a few slaughtered birds should dull us to the sense of humiliation which we ought to feel keenly.

The Little Fire in the Woods

THIS is the season of the forest fire, which rages, not as an inscrutable act of Providence, but on account of the culpable carelessness or criminal intent of man; and is permitted to rage because conservation has no "interests" to inspire State legislators who, without such incitement to duty, appear indifferent to the well-established fact that protecting our woodland is saving actual money for the people.

Mostly, these conflagrations are started by campers who leave their cooking fire only partially extinguished, or who toss a lighted match to one side, unmindful of where it falls or the likely consequences. Some of the fires have been set going by coal-burning locomotives, and in certain Adirondack sections fires have even originated, so it is asserted, in a local desire for State employment as fire-fighters at two dollars a day. It is difficult to believe incendiarism so vile a possibility, but if such creatures infest the Adirondacks their activity will be restricted by proper protective equipment; and a dose of No. 3 chilled shot from a full-choke, twenty-gage barrel will prove a salutary corrective both for the culprit and for his kind.

The Lord Helps Him Who Helps Himself

THE cost of last summer's forest fires in the United States is estimated in the millions of dollars—enough to have thoroughly safeguarded every forest area in America and left sufficient over to build a fleet of battleships. In New York State alone 177,000 acres were devastated, and a single county paid out $40,000 to fight fire that raged because of stupid unpreparedness and confusion and apathy in the hour of discovery.

It is hard to realize that such a condition is tolerated by a hard-headed people. We leave an entire forest floor heaped with highly inflammable dead brush; we cut no breaks; we dig no ditches; we erect no observation stations; we do scarcely one intelligent thing to prevent fire or to control it when once it has started; we sit down complacently and trust to Providence. When the fire comes sweeping across the woodland there is an agitated scurrying for local fighters at two dollars the day, and a great howl in the land over impending disaster. Afterward people talk earnestly of the need of suitable equipment; the newspapers print pleading editorials—and the next year it is all gone over again.

We have these costly destructive fires because a half-baked law leaves the forest floor strewn with inviting tinder, and provides no adequate equipment to fight flame once under way. Gifford Pinchot has demonstrated, through the Federal Forest Service, what intelligent preparedness can do to diminish fire loss, and the same system is open to the States. Commissioner Whipple in New York has taken the bull by its horns, and is going ahead building telephone lines and observation stations in the Adirondacks and Catskills.

In the first place, the dead underbrush and the fallen timber should be cleared out, the simplest and most economic way to do so seeming to be to give it to those who will carry it off. Observation stations will enable wardens to immediately discover fire and give them a chance to quench it before well started. A telephone system will make possible immediate assembly of guards; while lanes cut through the timber and ditches help to secure an early control, even when the fire has gathered considerable headway. When the remedy is so plain it argues ill of our intelligence that we continue to suffer—and to complain. And it's up to the people of the State to help themselves if they would save both their forests and their money. Legislation providing intelligent equipment and competent wardens constitutes the remedy.

Stamp It Out

THERE are two ways you and I can help protect our woodland which conserves the water that nourishes the crops, that feed the mill, that make America's industrial wheels go around:

First—Cast your vote for a man, whether for State or national office, who is independent of the "interests"; and don't wait until the situation has reached the stage where it is the lesser of two evils, but go to the primaries where the nominations are made—*and work*. Don't be one of those inactive "good" men who have no other recommendation for State service than that they are "God-fearing"! Fear of God makes for useful citizenship only when it is coupled with courage to fight—for the Church, for the State, for the Right—your right, my right, which is the right of the people. You can't unseat the politician who ignores that right except by determined and continuous assault.

Second—Put out your camp-fire when you start on your day's tramp in the morning, and be sure it is out. Stamp on the smouldering coals and cover them with dirt, lest a passing breeze fan them into devastating life after you have gone on your way. Throw no matches on to the ground without having blown out the flame and even brushed off and killed the ember end.

Thus shall we do our duty to our State, and save our business interests thousands upon thousands of dollars.

An Ill Wind That Blew Good

COMMODORE JAMES of the New York Yacht Club is to be congratulated upon the happy thought which ordered this year's cruise of his club out of the Sound and around Cape Cod for some real yachting. The gale that overtook the fleet on its way to Portland from Vineyard Haven, driving the majority to cover and putting several of the boats out of business, is one of the most beneficial things to have fallen upon American yachting in many a day. It laid bare the flimsy character of the prevailing boat type and the paucity of sailormen among yacht owners.

Of over twenty craft that started for Portland only three kept going and arrived without mishap—the sloop *Aurora*, the schooner *Elmina*, and the auxiliary *Intrepid*; the old *America's* Cup defender *Vigilant* limped into port many hours after, somewhat damaged but still in the ring; the remainder were strewn along the coast, some badly shattered, and one with the mast torn out [illegible]

True, the Cape Cod coast is a dangerous [illegible]

October. And the storm the New York Yacht Club fleet encountered was severe, but not so severe as to stop any steam craft of over forty feet water-line length, properly spared and efficiently manned.

If the Gloucester fishermen, whose daily business lies in these very waters, were scattered as were the New York Yacht Club fleet by every thirty-five-knot blow which fell upon them, I fear the great American people would frequently go hungry for their favorite cod.

More Sailors—Fewer Passengers

THE fact is that for the most part our yachts reflect the speed mania and are light-bodied, oversparred machines, best suited to pond sailing, whose proprietors are not yachtsmen, but owners simply. The spectacle of races being postponed, as we have seen this season and every season, even on the Sound, because there happened to be a bit of a blow, is comment enough on the structural qualities of the boats and the yachtsmanly qualities of the owners. It is because we need in American yachting real boats and genuine Corinthian sailormen that we welcome with open arms the activity among the small boats and the youth of the land.

The most inspiring result of the racing incidental to the New York Yacht Club cruise was the prominence of the amateur. 'Twas Cornelius Vanderbilt and Butler Duncan and Lloyd Phoenix that piloted *Aurora* and *Intrepid* through the storm to Portland; George M. Pynchon won the King's Cup sailing his *Istalena;* J. Rogers Maxwell handled *Queen;* Henry F. Lippitt, *Winsome.* In fact, the feature of the cruise may be said to have been the 65-foot class, all sailed by their owners. This is what American yachting needs—more sailing owners and fewer passengers.

A Leaf Out of the American Book

NOT that any one wise to the situation doubted, yet it was by way of being a satisfying indorsement of their right to stand for America that the Meadow Brook team, which defeated the pick of England at Hurlingham in June, should two months later also demonstrate its superiority at home by winning the Association championship at Narragansett Pier. Except for the absence of Mr. Whitney, the team was the same in personnel at the Pier as when it won the American Polo Cup lost to England twenty-three years ago; naturally enough, however, it was off its game, and barely shut out New Haven 6 goals to 3, winning the tournament finally from Dedham 15 to 6.

But the interesting feature of the events at the Pier was the potential strength of several groups of players such as made up the New Haven and the Dedham teams—especially the New Haven. A little more of teamwork, added to their individual excellence, would have come mighty near to returning New Haven a winner on that August 7 when Meadow Brook snatched a hard-earned victory by a three-goal margin. So, although recruits are not numerous to this splendid game, at least it is gratifying to note that the average form improves without cessation, and that there are competent understudies for places in the front rank. A comforting thought with a challenge from England in prospect.

When that invading team does come, by the way, it will show the best polo any British four ever revealed, for a letter from a London sportsman tells me Englishmen are preparing to profit by their recent defeat by making their play more open. There is even talk of adopting the American cigar-headed mallet to replace their square-faced one—all of which means that American polo must sustain its class, for the defending team will have its work cut out.

A New Sporting Daniel Come to Town

THE decision of the International Committee of the United States Lawn Tennis Association, to challenge for the Davis Cup with a second team substituted for the first string if it wins the preliminary tournament, is so extraordinary as to be unbelievable had not the statement been given publicity by the Committee itself.

The Davis Cup was offered several years ago for international play by Dwight Davis of St. Louis, himself a player of strength at that time and of promise which, like so many of our young hopefuls, he did not stay long enough in the game to fulfil. The Doherty brothers took the Cup to England, and there it stayed until Australia grew Brooke, who, with Wilding, carried it off to the Antipodes, where it now is and where it is likely to remain (as long as Brooke continues active) until the Dohertys return to the game in England or we in America develop a first class having more than one member.

The method of play for the Cup has hitherto followed the usual lines governing such contests, viz., the several challengers within a given date nominate their teams which, at a mutually agreeable locality, meet in a round-robin tournament to determine upon the one entitled to challenge the holder, and the team winning this preliminary tryout plays the holder of the trophy. This is the usage of sporting ages.

Now comes this Committee—Dr. James Dwight, W. J. Clothier, R. D. Wrenn—and, with the approved American habit of thought concentrated on the mere winning, prepares to lay the foundation for some more Olympic games kind of athletic history. The challenging team, as cabled to England by the International Committee, comprised Champion W. A. Larned, W. J. Clothier, H. H. Hackett, and R. D. Little. It was soon afterward learned, however, that these men could not make the Australian trip; but the Committee intends, nevertheless, to enter them for the preliminary Cup play against the English team. If the United States wins, the Committee plans to send to Australia such other players as can be found to go in place of the ones that have been officially announced as our representatives.

Such a procedure is unprecedented. It is unfair to the Englishmen to put against them the very best four in the country, who we know will not make the trip; and it is discourteous to the Australians to offer a second string for an international tournament to which our first string only is entitled by right of conquest in the preliminary. If the team cabled to England could not go to Australia, the Committee should have at once withdrawn it from competition and played against the visiting Englishmen only such men as could go.

The course proposed by the Committee is a rank violation of sporting tradition and ethics, and would not be tolerated in any organization less loose in its methods.

The English team contains about the best Great Britain can muster, but it is second rate, and even the addition of Gore, the champion, would strengthen it very little. The match should be easy for the proposed American home team; too easy to be interesting.

California to the Rescue

THE championship demonstrated for the third time this season that we have only one really first-class lawn tennis player in the United States—William A. Larned, who earned the title for the fifth time, and in doing so quite outclassed W. J. Clothier, the All-Comers' winner. Truth is, the invading Californians—Maurice F. McLaughlin, Melville H. Long, Thomas C. Bundy, and George Janes—provided about the only enlivening element at Newport; and a promising group they are

Maurice F. McLaughlin

This California expert has proved to be the most entertaining feature of the Eastern lawn tennis season. He is the present Pacific Coast, Western, and Interscholastic champion and won his way to the finals of the All-Comers tournament at Newport last month. Coupled with Melville H. Long, from whom McLaughlin captured the Pacific Coast championship, the two will be the mainstay of the team which the U. S. Lawn Tennis Association is sending to Australia to try for the Davis Cup

—the first two, champion and ex-champion of the Pacific Coast, being the best. Long beat Behr, but had been defeated at the Crescent tournament by R. D. Little, who, all things considered, seems of the veterans to have done the best work of the year. McLaughlin won the Interscholastic and reached the All-Comers, defeating Long en route (who had beaten Behr), where he lost to Clothier. He is under twenty, as also is Long. If these two youngsters from the Golden State reach the form their present skill suggests, and do not slump, as most of our Eastern hopefuls have done through trying short cuts to success in place of the good old way of work, that empty first class of ours may be tenanted. Meanwhile, Miss May Sutton shows the way; recently she defeated the two first women of Canada, including the champion, Mrs. Hannam.

The conduct of the Newport tournament was a little better than in 1908, but not enough so to relieve it of the odium of being the most vexatiously managed tournament of the year.

Expel These Also

IN THE rapid-fire match of the National Rifle Association meeting at Camp Perry last month, the score of the team representing the United States Naval Academy was thrown out because the cadets had removed the stop pins of their rifle bolts, thus artificially quickening the action and taking unfair advantage of all the other competitors.

This is, I believe, the first instance of a team of cadets cheating in honorable contest, and the individuals who have so discreditably distinguished themselves should not be permitted to defame the Academy's good name without paying heavily for the privilege.

The other day some West Point cadets were expelled for hazing (and rightly so, no doubt; I do not question the justness of the punishment)—mere boyish pranks; but here in the Naval Academy representatives is revealed the meanest type of deceit—cheating an opponent in open contest—which reaches to the very essence of manhood, for of all obnoxious beings the liar is the most intolerable. Our national academies should be cleansed of such blood, and without delay.

Making Good

THE team scores made at the recent United States rifle shooting championship speak well of the efficiency of the nation's defenders and amply justify increased attention to target practise by the militia. The first prize was won by the United States navy team—score, 3,801; United States infantry won second with 3,752; Massachusetts militia, third, 3,727; United States cavalry, fourth, 3,746; Ohio, fifth, 3,715; Wisconsin, sixth, 3,695; New York, seventh, 3,686; Pennsylvania, eighth, 3,677; United States marines, ninth, 3,671; Iowa, tenth, 3,651.

The significant elements in this showing are, first, that the lowest score of 1909 is considerably better than the highest winning score of 1908; and, second, that the West improved the most.

If the National Rifle Association never did anything beyond stimulating interest in target practise as it has so successfully, results would still warrant its organization, for the stanchest line of defense any people can have is accuracy of the man behind the gun.

And the expert shot is a harbinger of peace.

Betraying the People's Trust

DON'T let the partizan press, or those unfriendly to protection of the public forest and water rights, fool you into thinking that the recent commotion over certain lands withdrawn from the public domain is merely a personal conflict between Pinchot and Ballinger. It's a fight all right, and it will be a fight to a finish—but it's a fight between conservation and dissipation, between the rightful duty of the people and the wrongful desire of a few.

Ballinger, masquerading as an upholder of the letter of the law, apparently is trying to neutralize the work of conservation by restoring to private exploitation areas already withdrawn for the express purpose of safeguarding the public interest.

Pinchot stands as the champion of the people in opposing this new policy at Washington. He says truly that "right construction of the law works, and must work, in the vast majority of cases, for the benefit of the men who can hire the best lawyers and who have the sources of influence in law-making at their command. Strict construction necessarily favors the great interests as against the people, and in the long run can not do otherwise. Wise execution of the law must consider what the law ought to accomplish for the general good."

Conservation is no faddish movement by a few enthusiasts—it is a national policy which declares the greatest good for the greatest number, and that means the greatest number of the plain American citizen. Conservation is no vague "ism"—it simply spells foresight and intelligence in handling the people's rights, in the administration of public waters and forests. It is the duty of the people's official servant to defend the people's manifest rights.

That is conservation; and that is what Gifford Pinchot stands for—the spirit as well as the letter of the law—enlightened sentiment as opposed to individual greed.

Allah be praised for the man who interprets the spirit of the law, and is inspired by considerations above mere material return—we need him sorely in these greedy dollar-seeking days.

No Place for Advertising

IT IS a cheering find in the worthy effort making to ease life a bit for the city work-horse (and thereby increase the value of its service to the owner) that the readiest response has come from the drivers themselves.

The two largest parades—those of Boston and New York—showed surprising improvement in grooming and general appearance. True, the pessimist may assert that the horses of these parades were not the ones of daily toil; no doubt individual cases, to prove his statement, could be found, and still a handsome margin left to the good. As a rule, the horses of the parades were the ones in actual regular service, as I have taken pains to learn—both in New York and Boston; moreover, I found the drivers taking great pride in their share of the movement and already discussing future plans with enthusiasm. The average human dearly loves a parade, and the introduction of this feature in the general help-the-work-animal movement was a happy solution of the long vexing problem of how to reach the individual caretaker.

One fact among others to particularly impress me in both these parades was the increasing number of open bridles—*i. e.*, without blinders—the only kind that should ever be put on a horse.

It will be well another year to limit class entries from any one man or firm. I noticed, especially in New York, that in a given class certain large companies were represented by from six to a dozen or more entries. Of course it was good advertising, but the work-horse parade was not inaugurated to exploit the stable equipment of wealthy commercial companies. Moreover, unlimited entries in the classes lengthen the parade to a tiresome extent, and so defeat a wish to interest the public.

Let's keep the advertising out of the work-horse parade.

Opening Old Waterways

What the Motor-Boat is Doing to Make Small Neglected Streams Navigable

By ELLIOTT FLOWER

WE WERE very comfortable, the boatman and I. I was the more comfortable, for I was in the stern, smoking, while he was at the oars, but he was also smoking. We were going down the Yahara of Wisconsin, and it is not a difficult task to row a small skiff downstream, especially when the current is just sufficient to help along without making any dangerous rapids or eddies.

It was only when we encountered barbed-wire that we became really busy, even I being then obliged to abandon comfort temporarily. One or the other of us would shout a warning, the boatman would swing the bow of the boat upstream, and we would back down upon the wire obstruction. It was then my business to grasp the wire or wires—there were usually two of them—and force them up so that by crouching low in the boat we could pass under.

Did you ever try to wrestle with barbed-wire in a moving boat?

Well, just double the difficulties of a barbed-wire fence on land and you will have something approximating the entertainment it will give you on a stream of moderate current. The only detail in which the barbed-wire of the river may be said to be easier than the barbed-wire of the fields is its comparative looseness: it can not be drawn as taut across a stream that is fifty or a hundred feet wide as it can between posts on land, although it is not unusual to run posts pretty well out into a river.

This is not to say that the barbed-wire of the river is a sagging thing that can be easily pushed up to allow a boat and its occupants to pass—occasionally we had to lie almost flat in the boat to get under—but it is naturally impossible to string it as taut on long stretches as on short. They do pretty well on the Yahara, however, and, as the lower wire was usually just about the water level, it had to be forced up a good bit before we could pass under.

The Farmers and the Barbed Wire

IN THE course of time this began to pall on me as a sport. I had inadvertently grasped a barb on one or two occasions, and on one or two other occasions a barb had grasped me by some part of my clothing. I began to be peevish about it.

"What's the explanation of these wires?" I asked the boatman.

"Lazy farmers," he answered.

I did not understand, and I told him so.

"It is easier," he explained, "and also much cheaper, to string a couple of wires across the river than it is to fence in the river-front of a pasture, and it is just as effective in keeping the cattle from straying. If you owned half a mile of river-front, wouldn't you rather string wires across the river at each end of your property than run a fence the whole length?"

Looking at it from that point of view, I admitted that I should.

"It sometimes happens, also," continued the boatman, "that a farmer owns the property on both sides of the river, and then he usually thinks he owns as much of the river as lies between."

"Does he?"

"Of course not. This is a navigable stream."

"Then he has no right to string wires across it?"

"I suppose not, but he's done it so long that he thinks he has."

"Why doesn't somebody stop it?"

"I don't know. I suppose it's easier to cut the wires."

"Cut the wires?"

"Yes. It's customary to carry wire-nippers, you know. We ought to have brought some along. It makes a bit of hard feeling between the farmers and those who use the river, but what can you do?"

"Are these conditions confined to the Yahara?"

"Oh, no. I guess they string wires across all the rivers that are not too wide and are not deep enough to float the larger craft. I know they do on some."

Later I found this to be true. Wires are strung quite generally on the smaller navigable streams of the Middle West, and I presume, although I have no definite information, that conditions are similar everywhere.

It occurred to me as rather extraordinary that the streams should be thus appropriated, without serious protest, by those who had no greater rights on them than the rest of the public, to the great annoyance, inconvenience, and occasionally danger, of those who might wish to use them as waterways. It was my understanding that a navigable stream was a good deal like a public highway, and a farmer would hesitate a long time before stretching barbed-wire across a public highway, even one little used, as a matter of convenience and economy. And if he dared do it, what then? Would he not be given almost immediate cause to regret it? Why should the rights of those who may wish to use the waterways be less jealously guarded?

I found, to begin with, that the practise of stringing wires is common upon many, if not all, of the smaller streams. Of course, where a stream is not navigable in law, there can be no valid objection to this, but I have reference to streams that the law declares navigable, which are used to some extent, and which, in most cases, would be used much more if it were not for the obstructions.

Except where a river is too wide or is deep enough to carry steamers or large launches, custom has made it almost the personal property of those who own the adjoining land, and many of them so regard it. They do with it whatever may suit their fancy, and they look upon the man with a canoe, a skiff, or a motor-boat as an interloper who has no rights at all. So strong is this feeling in some places that passing boats have been stoned and canoeing parties, stopping to eat lunch on the bank, have been driven away.

Now let us see exactly what is the status of the man who would use a navigable waterway—it is immaterial how infrequently it may be used so long as it is navigable—and also of the man who owns property along the bank, beginning with a little investigation into what constitutes a "navigable stream."

An application to the War Department, which exercises jurisdiction over interstate navigable streams, brought this definition, taken from a decision of the United States Supreme Court:

"Those rivers are public navigable rivers in law which are navigable in fact. Rivers are navigable in fact when they are used, or are susceptible of being used in their ordinary condition, as highways for commerce, over which trade and travel are or may be conducted in the customary modes of trade and travel on water."

To which is added this statement: "Rafting and the floating of logs are recognized methods of navigation." So, in effect, a river is navigable in law if you can float a canoe or a saw-log upon it in its ordinary condition—not when it is high or when it is low, but just as you ordinarily find it. A canoe, of course, represents one of the customary modes of travel by water. It is not even necessary that it should be used at all regularly or generally for such travel, but merely that it shall be susceptible of being so used. That brings pretty much everything but the creeks, and even some of them, within the definition of "navigable stream."

In the River and Harbor Act of 1899, after enumerating a score of things, including even piers, that may not be constructed on, over or under any navigable waters without the consent of Congress and the approval of the plans by the War Department, Congress clinched the whole thing with this: "The creation of *any* obstruction not affirmatively authorized by Congress to the navigable capacity of *any* of the waters of the United States is hereby prohibited." The penalty for the violation of any of the provisions of the sections of the act relating to waterways obstructions is, in the case of an individual, a fine not exceeding $2,500 or imprisonment not exceeding one year, or both. In the case of a corporation, the fine alone applies.

Rather a stiff price to pay for the pleasure of stringing wires that catch the unwary or doing any of the many other things that are convenient or profitable, and which farmers and others do everywhere on these minor streams. Little private dams are not unknown, and an occasional small foot-bridge is thrown across a stream for neighborhood convenience. All of which is unlawful without the express consent of Congress and the approval of the plans by the War Department.

This becomes of real importance only because of the growing use of the minor waterways for pleasure and profit. A few years ago no one cared whether there were wires or private bridges or dams or jetties or anything else that the adjacent property owner might think necessary for his convenience or otherwise advantageous. His rights were no greater then than now, but no one was interested in disputing any rights that he might assert or appropriate to himself.

The Motor-Boat and River Obstructions

THEN came the motor-boat, and, following that, the canoe suddenly attained a new popularity. The motor-boat and the canoe demand a wider range than the skiff. The canoe, of course, can be easily portaged, so that presented no serious problem, but the motor-boat is a different proposition. A launch of any size can be portaged only by the use of a cradle or, at least, a wagon. That means that its sphere of activity is limited by the nearest dam in either direction, which is particularly exasperating to the man who has a good boat. Ten miles of river is to him what a frog-pond is to a man with a skiff. It becomes about as interesting, after a time, as riding a horse up and down a lane.

There would be no significance in this if motor-boats were occasional luxuries, as they once were, but in river and lake towns they have become almost as common as bicycles and automobiles, and boat-builders everywhere last spring reported that they were swamped with orders. Every town of any size, and some of no size at all, that I passed on the Yahara, the Rock, the Mississippi, and the Illinois Rivers had its fleet of motor-boats of one kind or another, and loud were the complaints of river obstructions that restricted the use of the rivers. But the motor-boat promises to open many of them again. It has given a new popularity to the smaller waterways, and it promises to do for them what the automobile has been and is doing for the highways.

A small motor-boat can go almost anywhere that a skiff can go, and go quicker. Therefore it wants to go farther. It can not be portaged like a canoe, so obstructions that are merely annoyances to the latter are serious obstacles

Passing through a canal lock

to the summer. This, taken with the popularity it has attained and the comparatively recent general development of canoeing as a pastime, has created entirely new conditions on the minor waterways, and the great increase in the number of resorts and summer homes has served to emphasize these new conditions, being, in fact, one of the results and also one of the causes of motor-boat popularity.

I passed no town of any size that did not have its groups of summer homes along the river—always above the dam in dam towns, for the boats are kept above the dams. There might be as beautiful, or even more beautiful, spots below, but they were unavailable. Above, everything was trim and neat and attractive—delightful homes, well-kept lawns, fine boathouses, trim launches; below, the property was all unimproved. I imagine a dam must double or triple the value of property above it and have a correspondingly injurious effect upon the property below it. This, of course, when one gets beyond the business water-front of a town, is largely due to its availability or unavailability for summer homes, summer hotels, and amusement parks, and this availability, in turn, depends upon the launch and the motor-boat. So, again, we come to the all-pervading influence of the motor-boat.

Profile Rock, near Madison, Wisconsin

Blue Rock, near Grand Detour, on the Rock River

The Installation of Locks

THESE conditions are now being recognized in all legislation and department decisions affecting the waterways. For instance, the permission to construct a dam at Kilbourn, on the Wisconsin River, was coupled with the condition that a lock should be installed whenever, in the opinion of the War Department, the needs of water travel might require it. A specific stipulation for the installation of a lock, according to those interested in reopening the streams, is not necessary, as the Government can compel dam owners to put them in anyway, and they further maintain that it will not be very long before the Government will demand the installation of locks at points where the conditions are favorable for boating, or can be made favorable for boating, on both sides of the dams. A lock for the smaller pleasure craft is not particularly costly. There is one on the Yahara, between Lakes Mendota and Monona, at Madison—the only lock of this kind of which I have knowledge.

In line with this is the movement to open the Yahara to motor-boats and even small steamers from Madison to Janesville. Similar efforts are being made along other streams, and success in one case will stimulate others to work. I speak particularly of the Yahara because I happen to be familiar with conditions there. It is not so long ago that none but a few campers cared whether the Yahara was open or not. With the coming of the motor-boat, however, came summer homes and summer hotels beyond the points that previously had been considered reasonably accessible. It was about as easy to go to the end of the chain of four lakes as it had been to cross the first one before. So summer hotels and cottages appeared on Lakes Waubesa and Kegonsa, and now it is planned to make an open channel to Janesville.

If the Yahara can be opened to motor-boats for its entire length, why not the Rock? And if the Rock, why not any river that is capable of floating them? The same sort of a movement is under way along other streams, and growing fleets of motor-boats everywhere are making the demand for more room ever stronger. They are practically forcing the reopening of old waterways.

There can be no doubt that one reason why existing conditions on the smaller rivers have been allowed to remain as they are lies in the lack of knowledge on the part of those who do or would use them as to what streams are and are not "navigable."

However, the law is sufficiently specific to enable one to judge with reasonable certainty, and a general knowledge of the provisions of the law will in itself do much toward clearing many of the streams of their obstructions. It is only necessary for those who would use them lawfully to know their rights and for those who do use them unlawfully to know the penalty. The law may be invoked against offenders any time that some United States district attorney awakes or is awakened to the fact of the violation, and the advantage secured would hardly seem to be worth the risk.

Let the Children Dig

The Sand-Pile and the Garden

By EBEN E. REXFORD

IF I were going to take a family of children into the country to live, or to remain over summer, the very first thing I would do in the way of providing for their entertainment would be to make a sand-pile for them. This I would locate in an out-of-the-way corner of the home grounds, and I would arrange, if possible, that part of it should be in shade, the balance fully exposed to the sun. The children want something they can dig in, and not merely a surface-covering of sand two or three inches deep. Half a dozen loads are none too many, you will find, to enable them to carry out their engineering feats in making tunnels, and sinking wells, and laying out farms and fields, and the hundred and one other things boys and girls with healthy imagination will plan and execute when given the opportunity to do so.

I have spoken of shade and exposure in connection with the location of the sand-heap. There should be both. On hot midsummer days the children will find exposure to the intense heat of noon almost intolerable, but it will not be sufficiently so to keep them away from their playground. The branches of an overhanging tree or the wall of a building on the sunward side of the heap will temper the heat enough to make it healthily cool, and they will be glad to take advantage of it temporarily. But quite as healthful in its effect will be a sun-bath in the forenoon, and during ordinary weather children often take delight in making veritable salamanders of themselves.

They Never Tire of the Sand

THERE is really more health, more pleasure for the little folks in a good, big pile of sand than in anything else I know of. It will keep them busy as no toys can, because there will be something fresh and new doing in it every day. Indeed, they never tire of it. It won't cost much, and the head of the family will consider it the best investment he ever made for more reasons than one. Sharp, coarse sand isn't dirty, and the mother who is given to worrying over the neatness of her children's clothes can turn them loose in the sand-pile without fear of mud-stains. But don't make the mistake of dressing the children up when you send them out to play. Put them into stout, plain, serviceable clothes—the smaller ones, boys and girls alike, into trousers with a big front, and let them dig and delve to their hearts' content. Provide shovels and pails and hoes and wheelbarrows. You won't have to show them how to use them. Instinct will tell them that in next to no time if they never saw any of these utensils before.

For the larger children—those eight to twelve years old—provide a piece of ground from which they can develop a garden. Children like to see things grow if their attention is turned in that direction, and it will need but little encouragement on the part of the parent to get them to undertake the culture of vegetables and flowers on a small scale. When you give your instructions in gardening, give it in the form of object-lessons. Take your spade and hoe and work with the children. Show them what to do, and explain to them why it should be done. Get them well started in the right direction, and after a little you can trust them to run things for themselves.

If you want the boys and girls to become really interested in gardening, provide them with just as good tools as you would select for yourself. When the child gets an idea that he is being treated in a childish fashion, he very soon loses interest in what he has undertaken. Give him to understand that you have confidence in his ability to do good work by giving him good utensils to do it with, and encourage him to rely upon his own judgment just as soon as you see that he begins to understand the principles underlying the work in hand.

And be sure to provide the children with tents; let these tents be of good size—large enough for the children to play in in bad weather — and encourage them to occupy them nights as well as days. Such a sleeping-room is far healthier than the bedroom.

Winning Baseball Pennants

Brains Beat Hands and Feet at the Game

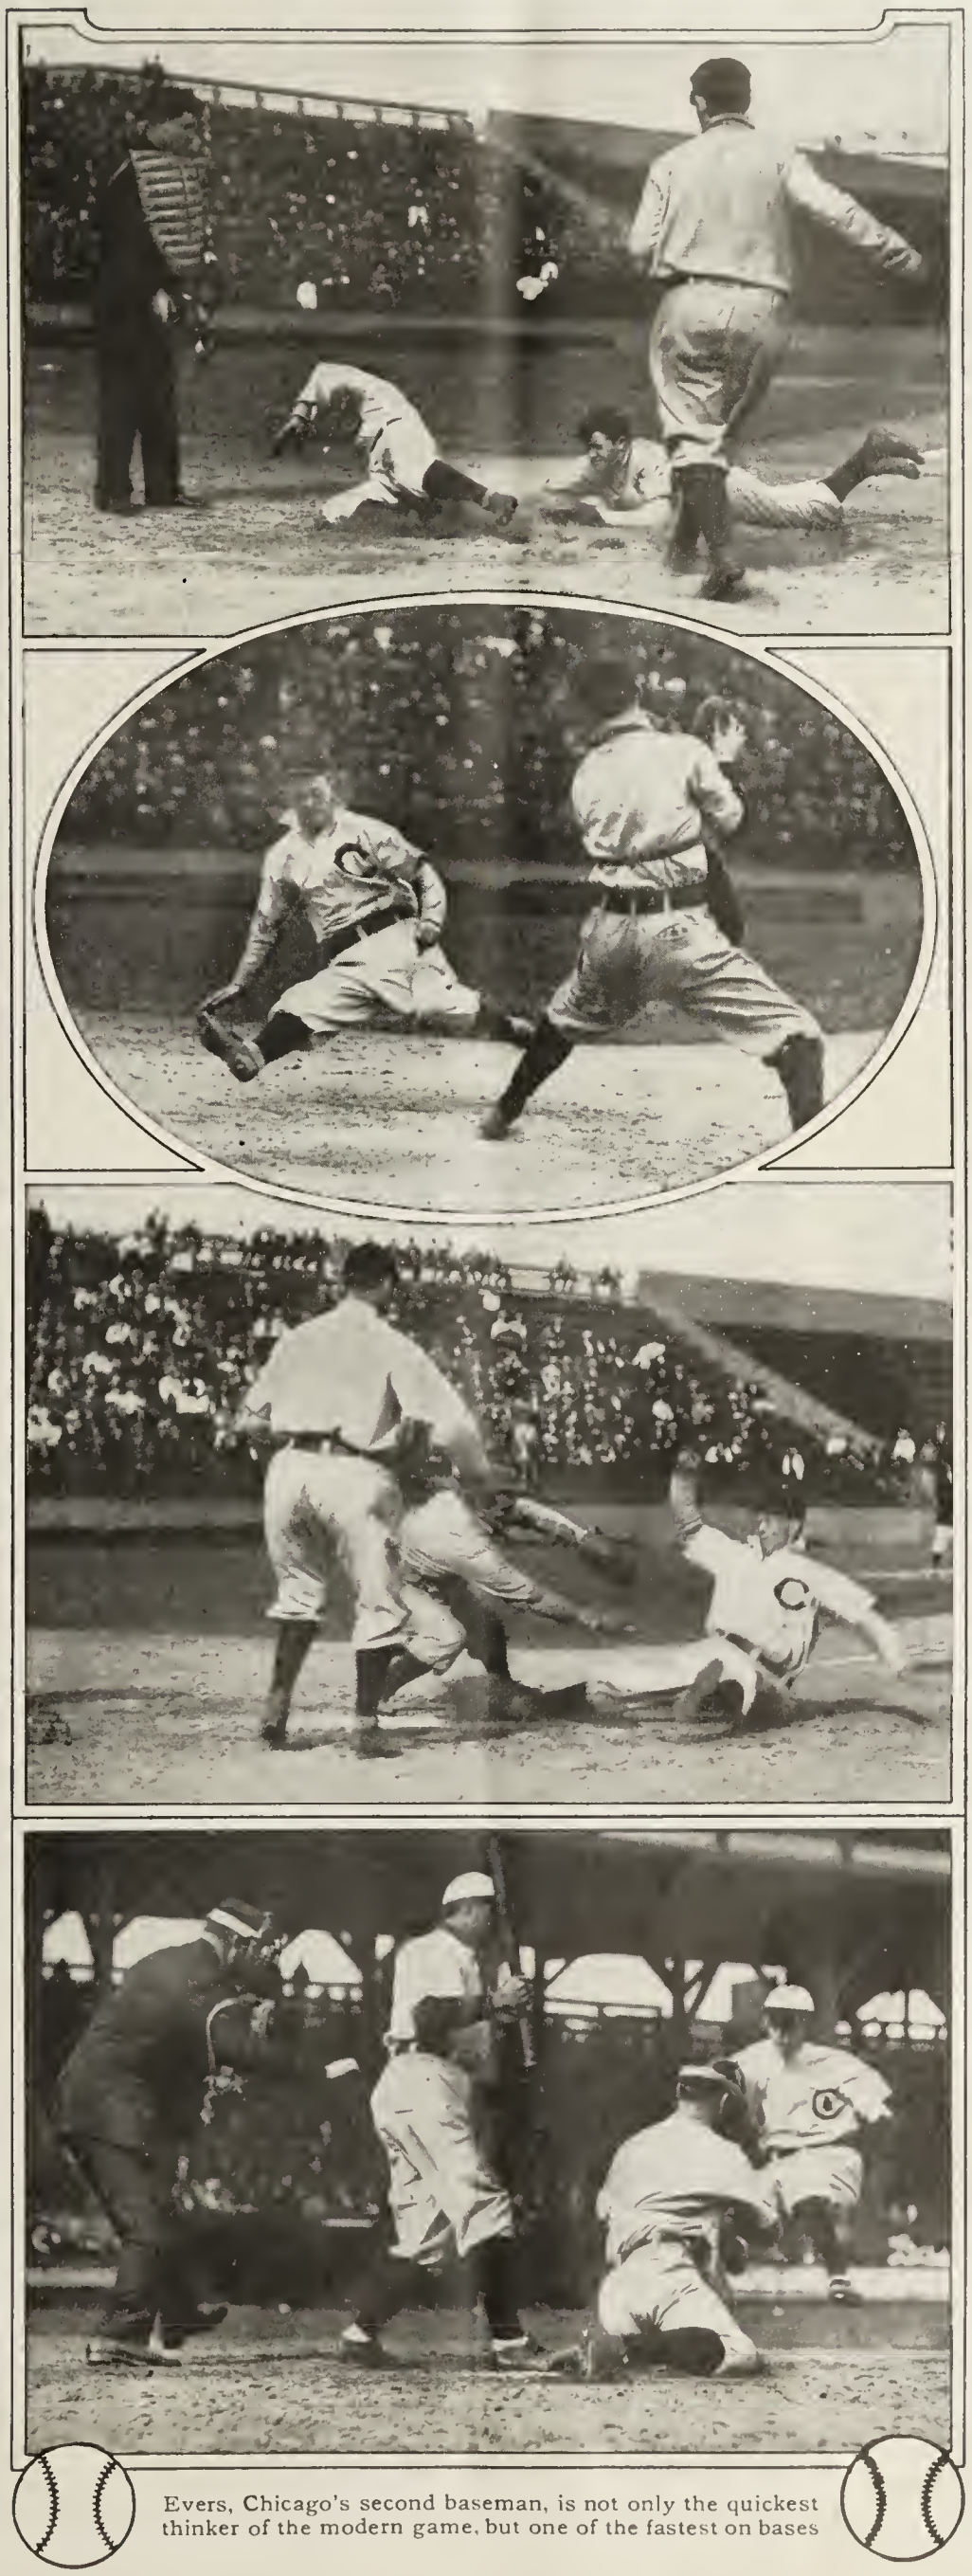
By HUGH STEWART FULLERTON

COMISKEY was sitting under the grand-stand of his baseball park in Chicago sliding back and forth along the seat with every move of the players who were battling for victory on the field. Dick Padden, veteran of many hard seasons, was at bat. Suddenly he writhed and twisted as if making frantic efforts to hit a pitched ball, and at the crucial second he threw up his arm just enough to make the ball touch it and trotted to first base. The crowd roared in hope of victory. "He made it hit him," commented Comiskey, *sotto voce*.

Padden touched first base, walked off a few steps rubbing his bruised arm and savagely accusing the pitcher of hitting him purposely (all for effect), and then, choosing the exact second that the pitcher started to swing his arm, he gained a flying start, threw his body away from the baseman, hooked his extended right foot around the bag, pivoted and arose from the dust cloud safe on second base. A moment later the batter drove a hit to right field. Padden sprinted hard until he passed third base, then slowed up just enough to tempt the fielder into throwing to the catcher, and as he saw the ball coming he sprinted again and slid safe. His slowing down had enabled the batter to reach second base and another hit followed. St. Louis broke in panic: the pitcher let down, and before the inning ended Chicago had scored five runs and victory was assured. Then said Comiskey thoughtfully: "I don't understand that fellow Padden: he can't hit; he can't run; he is slow in the field and on the bases; his arm is gone until he hardly can throw to first base; he isn't any too certain on fly balls; he is bad on handling thrown balls and weak on touching runners, but he is a corking good ball player."

Speed of Thought

COMISKEY'S comment was the best testimonial ever given to the theory that the brain can beat the hands and feet playing baseball.



The speed with which the brains of some baseball players act and transmit orders to feet or hands seems scarcely less than marvelous even to those who make baseball a business. One only can judge of the enormous thought speed of some players by feats which they have accomplished in games and under conditions which made it impossible that the plays should have been worked out in advance.

In the major leagues there are three classes of players, designated in the picturesque language of the game as "bushers," "bone-heads," and "topnotchers." The "busher" is the freshman, inexperienced but promising, and he derives his name from the fact that he recently has graduated from the "bush" or minor leagues. During or after his first season he is classified in one of the other divisions, according to the rapidity or slowness with which he thinks. To become a "bone-head" dooms a man forever to mediocrity, even though he may have much mechanical ability, because his inability to keep up the brain pace of the modern game bars him from valuable participancy in "team-play."

A Lightning Ruse

SOMETIMES, to those who watch and analyze every play, the mental gymnastics of the players amaze. Pat Flaherty, the Boston National's left-handed pitcher, performed a feat last summer that was conceived and executed with such speed that the eye could not follow. To estimate Flaherty's thought speed, figure that the pitcher's slab is 60.5 feet from the home base and that a baseball hit hard "on the line" straight back at the pitcher will travel sixty feet in approximately one-eighth of a second. Frequently balls thus hit strike the pitcher's hands with a sound that is like a rapid echo of the crack of the bat. Every player knows that frequently no one except the pitcher sees a "line drive" at all while the ball is in the air. Flaherty, realizing this, made the play entirely on the theory that he was the only one who had seen the ball. Boston was playing St. Louis, there was a runner on first base, and Konetchy drove the ball straight back at Flaherty with tremendous force. Flaherty caught the ball in his gloved right hand, and, whirling, he started to run rapidly back toward second base. Byrne, the runner on first base, knew from the sound of the bat that the ball was hit on the line and held his base to see where it went, but seeing Flaherty turn and run back, the same thought came to him that came to all spectators, that the ball had broken through Flaherty's hands and was rolling on, and he made a dash for second base to avoid being "forced out." Flaherty suddenly stopped running, grinned, and tossed the ball to McGann, completing the double play. The ball had been in his glove all the time, but the instant he felt it stick there he realized that Byrne would not leave the first base unless tricked into doing so, and, knowing that Byrne would judge what had become of the ball by the movement of the fielders, he conceived and executed his pretense of following the ball.

The trained sense of finished ball players is revealed by the lightning manner in which they judge the force and direction of a batted ball from the sound. Outfielders, who often can not see the ball at all until it raises out of the shadow of the stands, ninety-nine cases in a hundred spring in the right direction before seeing the ball. How they do it not one of them can explain. There is a story concerning "Tacks" Parrot that illustrates the point, even if not accompanied by affidavits. "Tacks," according to the yarn, was playing center field in St. Louis where the grand-stand was high, casting a shadow very heavy. The batter fouled the ball over the stand, and "Tacks," hearing the crack, gazed rapidly in all directions in search of the ball. Then he turned and raced out toward center field at top speed, leaped, stuck up one hand and caught—an English sparrow!

Evers, Chicago's second baseman, is not only the quickest thinker of the modern game, but one of the fastest on bases

Truth of the "Lucky Bound"

HOW much the quickness of brain depends upon the eye speed of the player is hard to estimate. Some players are faster of the eye than others, but all major league players must have quick eyes. Many are slow to perceive a situation and slower to take advantage of it. The speed of the eye of some ball players seems incredible. For several years after Lajoie started his major league career experts referred constantly to the big fellow as "lucky" because of his seemingly careless and indifferent way of fielding ground hits, and many predicted he would be a failure "as soon as the ball quits coming to him on easy bounds." Lajoie has a peculiar way of relying upon his hands alone, and seldom takes the precaution to get his feet and legs in position to block the ball should it elude his grasp. It looked to the experts as if everything hit toward second base came to Lajoie on the "lucky bound," they being unable to realize that his wonderful eye and quick brain enabled him to judge the instant the ball was hit exactly where the ball would bound, and that his speed enabled him to be there just at the instant to take it at the easiest position.

A Gift of Sight

IF YOU hold an object for a half-second before the eyes of the ordinary man and cover it suddenly, not one in ten can even call the nature of the object, much less describe it. Try the same experiment with a professional baseball player and the result is surprising. An incident that happened years ago on the Chicago National League grounds illustrates how rapidly the eye of the trained athlete conceives objects. "Barry" McCormick was playing shortstop when the batter drove a comparatively easy bounding ball toward him. The ball approached him, taking natural bounds, but on the final bound, before reaching the position, it struck something, was deflected, and "shot low." McCormick already "set" in position, side-stepped, stooped, caught the ball, made a hurried throw to first base, and then leaped forward to the spot the ball had struck and picked up a silver quarter dollar. The coin had been half-buried in the grass, but as the ball struck it, it had turned, flashed, and fallen back into its bed, yet in that infinitesimal space of time McCormick had realized the nature of the object.

The most famous play ever made in baseball, one still fresh in the memory of thousands, was the result of the quick thinking of Evers, Chicago's diminutive second baseman, who is perhaps the fastest thinker in modern baseball. The play was the one made in New York on September 23, 1908, when Merkle failed to touch second base and cost New York the championship. The play, however, did not originate in that game, but in the game between the Pittsburg and Chicago teams in Pittsburg, September 4. [illegible] tied in the ninth inning, with Clarke on third base; Gill, an experienced [illegible]

[illegible] men out. [illegible] that. Wilson [illegible] a clean hit [illegible] base and sent home Clarke, ran a few steps toward second base, saw the run score, and, without continuing to second base, turned and raced for the club-house to avoid being caught in the crowd that was swarming over the field. The moment that Gill left the base lines, Evers conceived an unheard-of play. He rushed to second base and screamed to Hofman to throw the ball to him, and when he received the ball he touched second and set up the claim that as Gill had not touched second base he was forced out, retiring the side, and that, as the rules forbid a run counting on the third out in any inning, the score still was tied. Umpire O'Day had seen the runner cross the plate and, turning, had walked to the water-tap and was taking a drink. He did not know whether or not Gill had gone to second base, and could not decide.

A fortnight later on the Polo Grounds, while Chicago and New York were fighting for the pennant in the final series of the season, exactly the same play came up in the last inning. This time Merkle, also inexperienced, made the same blunder Gill had made, and failed to complete the play by running to second base. But this time O'Day saw the play, and the result was his decision which caused the biggest sensation baseball has had in years. And, after all the argument was over, the one clearly established fact was that Evers's quick brain had saved the pennant for Chicago when it seemed won for New York by Bridwell's hit.

The Reign of "King Kel"

MIKE KELLY, "King Kel" they called him, perhaps was the quickest thinker and brainiest ball-player in the history of the national game. Kelly had no precedents to guide him in making plays, as his career was during the formative period of baseball, when he, Comiskey, Johnny Ward, Latham, Welch, and O'Neill were inventing and perfecting plays that are now in the repertoire of even the worst of the "bone-head" class. Rules were revised and revised because each time one was written Kelly devised some way of beating it.

One winter the lawmakers of the game changed the rules so as to permit managers to take players out of games during play and substitute others. A few weeks after the season opened, the White Stockings were playing Detroit, and Kelly was on the bench with Flint catching, and Chicago was in imminent danger of defeat. The bases were crowded with Detroit players, and a hit meant probably defeat for the champions. The batter hit up a high foul, which neither Flint nor Anson could reach, and just as the ball was falling near the grand-stand Kelly conceived a brilliant idea. Springing from the bench, he shouted at the top of his voice: "Flint, you're out of the game." Then calmly catching the ball, he took Flint's mask and glove and went behind the bat to catch. Gaffney, who was umpiring, refused flatly to allow the catch. Kelly read the rule to him in vain, but his argument was so strong that the lawmakers revised the rule at once, forbidding the changing of players while a play was in process.

The rapidity with which one player will grasp the plan of another and abet him in carrying it out is one of the marvels of modern team play. There is a trick that Evers and Tinker of the World's Champions have used several times in victimizing "bone-heads" on opposing teams that is almost laughable. The first time that it was worked was three years ago. A Cincinnati player was on first base when the batter hit a line fly to right field straight at the fielder. Four out of five times when a hit like that is made a runner at first base has no idea where the ball is until the coacher informs him or until the actions of the opposing players give him a clue.

Evers, knowing this, ran as hard as he could toward second base, slid on his side, and stuck out one hand as if making a desperate effort to reach the ball. Tinker, catching the idea, raced back of the second base as if trying to head off a ground hit. The runner at first base, tricked into believing that a safe hit had gone over second base, tore around the bases at top speed. He had rounded second base and was sprinting for third when the right-fielder caught the ball, tossed it back to first base, and completed the double play.

The Oddest Hoax in Baseball

NUMEROUS times players take advantage of the fact that base-runners do not know where batted balls have gone, but there is only one instance of a team winning a game because a player realized that he was the only one who could see the ball. "Gentle" James Ryan, then playing with Anson's famous White Stockings, made the play, and Lange abetted him in carrying out the oddest hoax in baseball history. The afternoon was dark and dusk, and a storm approaching. Chicago had a lead of one run, the visiting team had two runners on bases and two men out, and the White Stockings

(*Concluded on page 28*)

A man in Brooklyn built this and sleeps here

The Bed in the Open

The Joys of Outdoor Sleeping

By BAILEY MILLARD

"NO; it would never do to lie out in the night air. Mr. Emerson might take cold, and you know, Mr. Muir, that would be a dreadful thing."

That is what the Boston friends of the Sage of Concord said to John Muir under the Mariposa big trees where Emerson, then in his seventies, had agreed to camp with the mountain-climber.

"So Emerson," said Muir to me in telling the story, "took advice of his friends and went to the hotel. I had been trying to induce him to take a long camping trip back into the heart of the mountains. He was willing, but his party, full of indoor philosophy, raised the question of this baleful open-air sleeping. I compromised on one night in the big trees and counted upon it as a happy, memorable experience, but these folk with the house habit would not even let him have that. In vain I urged that it was only in houses colds were caught, that nobody was ever known to take cold in those woods. These people of culture shook their wise heads and dragged poor old Emerson off to the hotel. So I had my campfire all to myself."

It was nearly forty years ago that Emerson's friends refused to let him spend a night out-of-doors. To-day they would hardly hesitate, for Boston has added to its wisdom the knowledge that sleeping out-of-doors, so far from being dangerous, is probably the only safe way; and as to taking cold, where one has sufficient bedclothing there is not the slightest danger, even with the temperature at ten degrees below zero, which suggests a story told by George Wharton James about a city-bred man who was sent in his care to the mountains for his health.

An Elemental Joy

ON THE first night James proposed to put him up beside a snow-drift at a high altitude.

"But," protested the city man, "it will kill me!"

"Well," said James, "I'll see you are decently buried."

James gave his camp-mate a good hot supper and spread his blankets out upon the snow. When the timid man was well wrapped up, with a hot stone at his feet and a cheery campfire lighting up the wintry scene, he felt less alarmed. James talked him to sleep, and when he woke in the morning the sick man confessed he felt more comfortable than for many months. After that he slept out every night and is now restored to health.

Now, while it is a fact, and a pitiful one, that most persons wait until they are ill before venturing upon the practise of outdoor sleeping, there are many others who do so from actual choice, although they are perfectly healthy. Among these are the happiest people in the world—happiest because their nerves are steadiest, because they have more physical resistance to heat and to cold, and, most of all, because night after night they revel in that large elemental joy, that real animal content which is known by the shepherds of the hills.

Light folding cots are made for campers, but these, as well as hammocks, are a nuisance when one has to take them out of a wagon and set them up every night. I started to the Yosemite with four of these folding fooleries to accommodate as many members of my family, and when half-way on my journey traded the labor-making devices for potatoes. The cots were cold underneath and were always wobbly or breaking down. We took to the ground, and all my people agreed that on a camping journey there was no place to sleep upon like the good gray earth.

The model open-air sleeping-room, simple of construction, as prescribed for the dwelling-house

For a regular camp of a week or longer straw may be used, if it be handy, but there is nothing like the boughs of the balsam fir. These branches are light, springy, and fragrant, and to lie down upon a thick bed of them is to enjoy the luxury of the gods. Cedar boughs are heavy and the solid part will dig at your ribs and keep you awake. Tamarack is also too tough, and so is hemlock. Spruce is lighter and springier and will do very well, but the balsam fir is best of all and is more conducive to health. Balsam boughs have a tendency to spread under your blankets, but this may be corrected by pegging four poles at the sides, bottom, and top of the couch. To lie down upon a properly made couch of fir boughs on a clear night, to breathe their balsam while one gazes at the stars, and slowly to feel one's senses taken possession of by Nature's wholesome anesthetics, weariness, and pure air, is among the most delicious and treasured experiences of the mountain traveler.

Tent sleeping is not always beneficial, unless ventilation is thorough. Not only should there be a hole at least a foot square high up in the back of the tent, but the flaps should be left wide open or one side tied up at least six inches above ground. Even in cold weather there should be some sort of opening, for cold air in a tent or room is not necessarily pure air. For a camping journey the lighter the tent the better.

Outdoor Sleeping at Home

AS TO outdoor sleeping at home, many methods have been devised. There are the sliding bed, on which the upper half of the sleeper extends out of the window and is covered with an awning, having one side open; the roof cage, for city houses with boarded tin or shingle top and screen sides; the porch tent and the back-yard shack, two sides of which are lattice work, with inside storm curtains of canvas that can easily be lowered; but

Properly set, with ventilation well provided for, a tent is the most pleasurable shelter for out-of-door sleeping

the most practicable of all is the sleeping balcony. This balcony, or upper porch, is generally built upon the rear of the house off an inside dressing-room that is kept at a comfortable temperature. Such a structure, say 7 by 9 feet, can be built upon brackets at a cost of fifty to one hundred and fifty dollars. One side of it should be fully enclosed to protect the sleeper from prevailing winds, and there should be an overhanging roof. The house wall, of course, affords additional protection. The other two sides should be boarded three feet up from the floor, and above that they may be left open, with canvas curtains drawn up to the top, ready to be let down and buttoned securely in bad weather, always leaving a narrow gap at the roof-protected top for ventilation. Lattice-work may screen the open-air sleeper. It prevents the bed-going and uprising from becoming neighborhood affairs.

Near my home on the Palisades, overlooking upper Manhattan, is a model outdoor sleeping-room, occupied every night, even in zero weather, by a real-estate man, his wife and child. These persons are not invalids. They sleep out from choice. Little Peggy, as the child is called, is a year and a half old, but she has never slept in the house. Peggy is a normal, healthy child, not in the least fretful, but always seemingly full of the joy of life. Every night she is dressed in her night-clothes in an inside room and laid in her little bed, which is then wheeled out upon the balcony, where she sleeps soundly and with rarely a waking cry. The balcony is at the back of the house, looking down upon the Hudson. It is 8 by 10 feet and opens out of a dressing-room. Six feet of the length is cut into the body of the house. The remaining four feet project beyond the house wall, the projection being sealed from the floor all around to a height of three feet, leaving large openings with grooved casings into which are fitted sliding blinds like those in railway cars. The blinds are closed only in bad weather. It is easy to convert an ordinary porch into a fresh-air chamber by enclosing one or two sides with glass or canvas and leaving the other sides open. If wooden shutters or canvas curtains are provided for the open places there need be no exposure to wind, rain, or snow.

There are several devices for sleeping out of doors in your own house, and any of them may be employed by the apartment dweller. A home-made window tent that will serve every purpose is constructed as follows: Take some 1 by 2 inch strips of pine and some good, heavy ducking, and with these make a canvas box with a wooden framework, the length of the box or tent to be the width of the bed and the width and height of the box to be those of the lower window-sash. Leave the bottom and the window end of the box open and let about two feet of canvas hang down below the bottom of the frame on the three enclosed sides. As this box is to be laid upon the bed, one side against the headboard, it will be seen that the wooden framework can be used only on three sides of the bottom, otherwise the sleeper would feel an uncomfortable weight upon his body. Instead of the mid-bed wood-strip, therefore, use a piece of strong elastic tape stretched across the bottom of the tent and over the bed.

In a region which is infested by insects you may sleep undisturbed and in comfort, if protected by a wire cage

The loose canvas at the head and side of the bed should be tucked under the mattress. A wood-frame screen should be placed in the window and the open end of the tent-frame should be fastened to it by hooks and screw-eyes at top and bottom. A low-hanging awning outside the window should then be let down, and thus one may sleep in pure air in his own bed without danger from exposure.

My experience as well as that of nearly every other outdoor sleeper that I have met proves one fact conclusively: The number of indoor sleeping hours can be cut in two by the outdoor slumberer without ill effect, and no one who sleeps afield ever requires in one night more than six or seven hours of tired nature's sweet restorer unless he has been sleep-starved beforehand.

Let us leave our stuffy bedrooms in summer and lie out under the stars. They are mighty good company, stars are. They wink at you confidentially and say a great many pleasant things in a language all their own.

The Call of the Hoe

To Stir the Soil Is to Let in the Air and Thus Give It Fertility

By L. H. BAILEY

Dean of Cornell Agricultural College

I DOUBT whether a person can find in any literature a good history of the hoe; and yet the hoe is the implement with which man has possessed the earth. It was with some kind of a hand tool that he first broke the earth and then planted the seeds that they might grow.

If we were to make a history of the hoe, we should show the way by which man has come to his present state; for it is more than likely that many of his implements have evolved out of the crude tools with which, in his primitive state, he struck the earth. The remainder of the early implements have probably arisen from those with which he struck other animals and protected himself in combat. The implements of combat tend always to pass away as men ascend, but the implements of tillage tend always to increase.

The hoe is undoubtedly the primitive form of the plow; for a plow is essentially a hoe drawn by a man or a domesticated animal. The furrow-turning plow is a very late development. In fact, the usual plow of many peoples to-day is only a crude improvement of the crotched stick, lifting and breaking the earth but not inverting it.

It may astonish the intending countryman to be told that if he wants a good garden or crop he must water it with a rake or harrow before he waters it with a hose; and yet this is just what he must do if he would be a worthy member of the craft that makes the earth to blossom.

In dry weather the soil moisture tends always to rise and to pass from the surface by evaporation. Anything that checks the surface evaporation, of course, keeps the water in the soil. A board or a blanket or a mulch of sawdust on the surface prevents or checks evaporation. The earth is moist beneath the covering. Similarly, a layer of dry loose earth acts as a mulch; and in this case we may make the mulch on the spot rather than apply it as a foreign material. The mulch is made by any surface-working tools that leave the soil loose and more or less fine.

A "crust" of earth usually acts just the reverse of a mulch, for it continues the capillary connection of the under-soil with the atmosphere. It is, therefore, necessary to break up or destroy the crust as well as to make the mulch; so that the hoe may very properly precede the rake; or, in field practise, the cutting "cultivating" tools may precede the straight-tooth harrow.

It is more important to keep the water in the soil than to add or apply water to it. After a man has learned how to keep and utilize all the water that the rains provide him, he may then add more if his plants need it; and it is exactly the land that is best tilled and handled that profits most by the application both of water and of fertilizer.

The "dry-farming" in the West, now so much in the public discussion, is a process of storing and keeping the rainfall (by deep preparation of the land and maintenance of the earth-mulch) until there is sufficient supply in the soil to make a crop. Vast areas of semi-arid lands that can never be irrigated—because of lack of water and of the physical configuration—can be made to yield a good produce by means of saving and utilizing the natural rainfall.

The stirring of the soil lets in the air, improves the physical structure, keeps the water, makes it possible for certain bacteria to multiply, and in other ways aids the soil to produce a crop. The tilling of the soil is properly, therefore, a continuing process for a good part of the season; and its weed-killing function is only secondary or incidental.

The delightful New Mexico climate invites to outdoor sleeping

One comes into the closest contact with the soil and the plant when he applies the tools of tillage. It is inexplicable what constitutes work and what pleasure. The handling of an agricultural implement is universally regarded as the most menial of labor, and yet the more laborious and essentially less inspiring handling of ball clubs and golf implements is assembled with the pleasures. The modern tillage tools, particularly the horse tools made in America, have come to be so comely and so nicely effective that the handling of them ought not to be wholly devoid of pleasure.

It is a good art to handle a hoe well. Very few persons can do it. Most persons hack and strike as if guided by mere muscular instinct; but now and then one finds a man who picks his hoe or rake with as much care as he chooses a walking-stick, who files the blade to a shape to suit, and who uses the tool with deftness and discrimination.

But it is the contact with the soil, and what grows out of it, that I desire chiefly to emphasize, because this contact is worth the while of any intelligent man. One acquires a sense of dominion in the use of these tillage tools that he scarcely gains in any other way. This is especially true in these times when we have learned to place so great importance on the features of different individual plants, choosing a particular plant as parent in order that we may produce a generation more to our liking. One can not do this work of improving new plants unless he comes very closely into relation with the different plants themselves. Plowing takes one into contact with the fields, but the use of the tillage tools takes one into contact with the soil and the plants.

Much more attention has been given to the perfecting of horse-hoes than to hand-hoes. In fact, there is very little to choose among the manufactured hand-hoes except in size, weight, and perhaps the "hang" of the handle. Now and then some freak hoe is put on the market, and it soon disappears. But we much need many modifications of the implement, using the common historic hoe as a basis. It is, of course, an indication of a gross lack of skill that persons do not discriminate in hoes and do not demand that the manufacturers produce variety in patterns; but if hoes for different uses were available, it would seem as if the demand for them ought gradually to develop. Some years ago a good lover of the soil, writing as A. B. Tarryer in an American magazine, illustrated and described a variety of garden-tillage weapons. I reproduced his descriptions in a gardening book. But the idea still needs developing. A real gardening nature-lover should be able to find in his rack one hoe tool for hard ground and one for soft ground, one for thick-planted areas and one for open areas, one for destroying young weeds (Mr. Tarryer called one of his hoes "infant damnation") and another for the big weeds and the sod, one for surface work and one for deep digging. There is no good reason, as far as I can see, why a farm boy should not be allowed the opportunity to have a hoe of his own as he has a steel-trap or a buggy whip of his own. I know a farmer who for nearly fifty years used one hoe for certain kinds of work. He knew the history of the implement; and his fingers had worn grooves in the handle so that the tool fitted him. This hoe is now laid away as one of the choice possessions of his old age.

A hand-tillage tool that it is a pleasure to own and to handle should at once extend one's contact with the soil; and I hold that this contact is worth making in the interest of good health, of wholesome entertainment and recreation, of the accomplishment of useful work, and as a part in a good education.

Filtering Ellis Island

What the Playground is Doing to Make Self-Supporting Americans

By LOUISE E. EBERLE

The Winged Victory is the emblem used on the badges given for athletic records to both boys and girls

FROM England comes the terrified cry: "We have neglected our youth. We have crowded it into the slums to devitalize as grass devitalizes under a stone. We have nothing to recruit our army from!"

What are we doing to save ourselves from England's disease? For we have the germ in our midst, with complications England never knew. In New York City sixty-five per cent of the school children live in congested districts. In many other cities that percentage holds, proportionate to their size. That condition alone has brought England to a pass where a mere play like "An Englishman's Home" can throw the nation into a panic.

What is going to help us to face that very peril, doubled by constantly increasing congestion and the continual introduction of the lowest elements of many foreign races?

Over a million immigrants come to this country every year. Many of them are the best class of peasantry, healthy and teachable, but still foreigners, and as such doubling the demand made by their mere numbers on the strength of this country for their assimilation. But there are countless others who have had spirit and life crushed out of them, who are feeble in mind and body, unhealthy and broken. These and their children must be made men and women as well as Americans.

The only practical way is to get at the children. It is hard to change an adult, especially one of a different race. The boys must be developed. The girls must be developed. In New York City alone there are six hundred thousand school children, three hundred and ninety thousand making that sixty-five per cent that live in congested districts. Four hundred and twenty thousand are of foreign parentage. In other cities the tale is the same in smaller proportions, for the foreigner in the city is almost inevitably pushed into the densest section, and of all the one million yearly arrivals only a negligible percentage go to the open, health-giving country.

Evil Influence of the Streets

THE streets are the foster-parents of a vast multitude of our men and women of the next generation. The only counter-influence is the school, and five hours a day in school for a part of the year will not counterbalance the evil influences, moral, mental, physical, of the streets, and so save us from reaping the bitter fruit of the present sowing. What will? Whatever it is to be must be through a universal appeal to children, for they can not be saved against their will. Whatever hand is to save must be large enough to touch all. What is the answer? The hundreds of thousands of children who are following the new call to play, to joy, are supplying it. And the answer they are giving is athletics—play, physical and mental joy.

For the sake of concrete facts let us consider New York City. Already seventeen other cities, including Baltimore, Cleveland, Cincinnati, San Francisco, New Orleans, are in line, and others coming. In New York there are one hundred and seventy thousand boys and girls engaged in athletics. Not the prosy, old-fashioned gymnastic kind, but games, play!—that feed spirit as well as muscle.

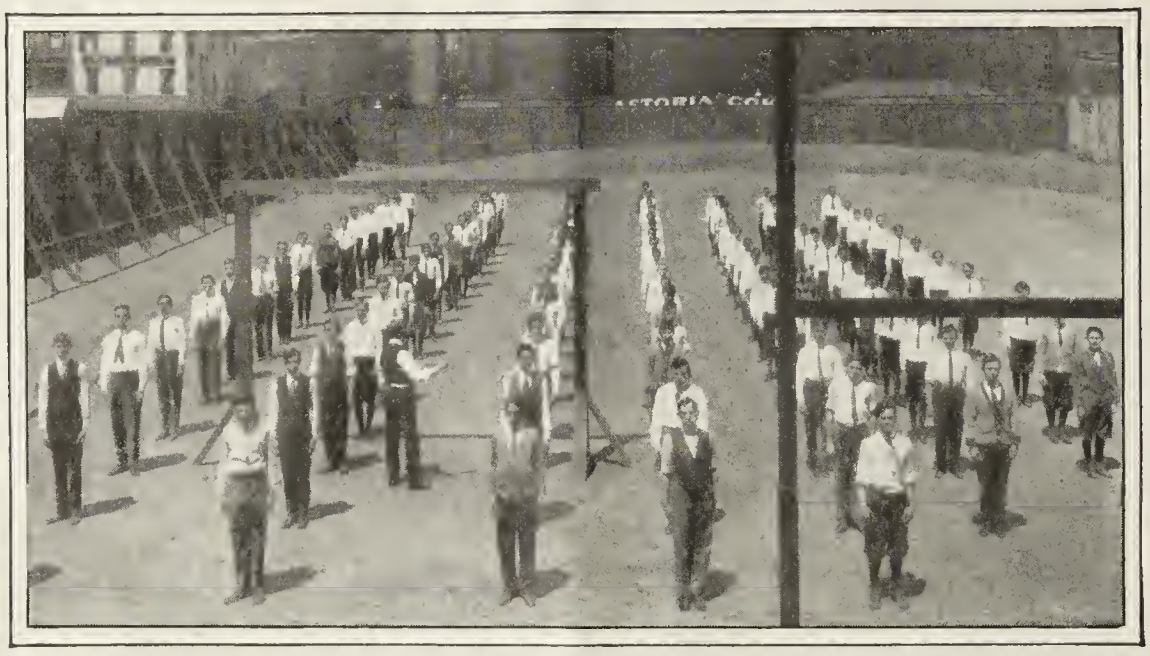
This is what, in five years, has resulted:

The standard of scholarship among those thus engaged in athletics has increased twenty-five per cent—here is the answer to the narrow-visioned who throw up their hands at the "time wasted" in athletics at the schools.

The physical standard among those engaged in athletics has increased twenty-five per cent—here is thought food for those who scoff at the idea of children needing play.

Here are some other results. A spirit of keen honor and honesty has been awakened. One of its developments is a growing lack of complaints in the contests, due to the spreading spirit of fairness. Another is the corrective effect upon that class known as incorrigibles—children most in need of, and least reachable by, help. A principal who has in his school as many lusty, book-shirking incorrigibles as has any school in the city, gathered them into one group and placed in charge an expert basket-ball player. A defiant class was taken to the gymnasium and brought back in an hour tired, peaceable, and interested. This was kept up. Basket-ball first and books afterward. But every one of those "bad" boys was promoted from his grade that year!

Another result is a priceless one. It is the teaching of discipline to boys and girls—the sharp, relentless discipline necessary for championship work. A father (one of many) tells of the years of effort to get his boy to keep regular hours, all to no avail. Then the boy began trying for a crew. After that it was seven o'clock up and ten to bed without deviation! The boys who are learning this lesson are becoming different. They look different. They act differently. They stop fights and act as monitors, not from a spirit of interference, but because that lesson of discipline makes them natural masters—having first mastered themselves, most difficult of all.

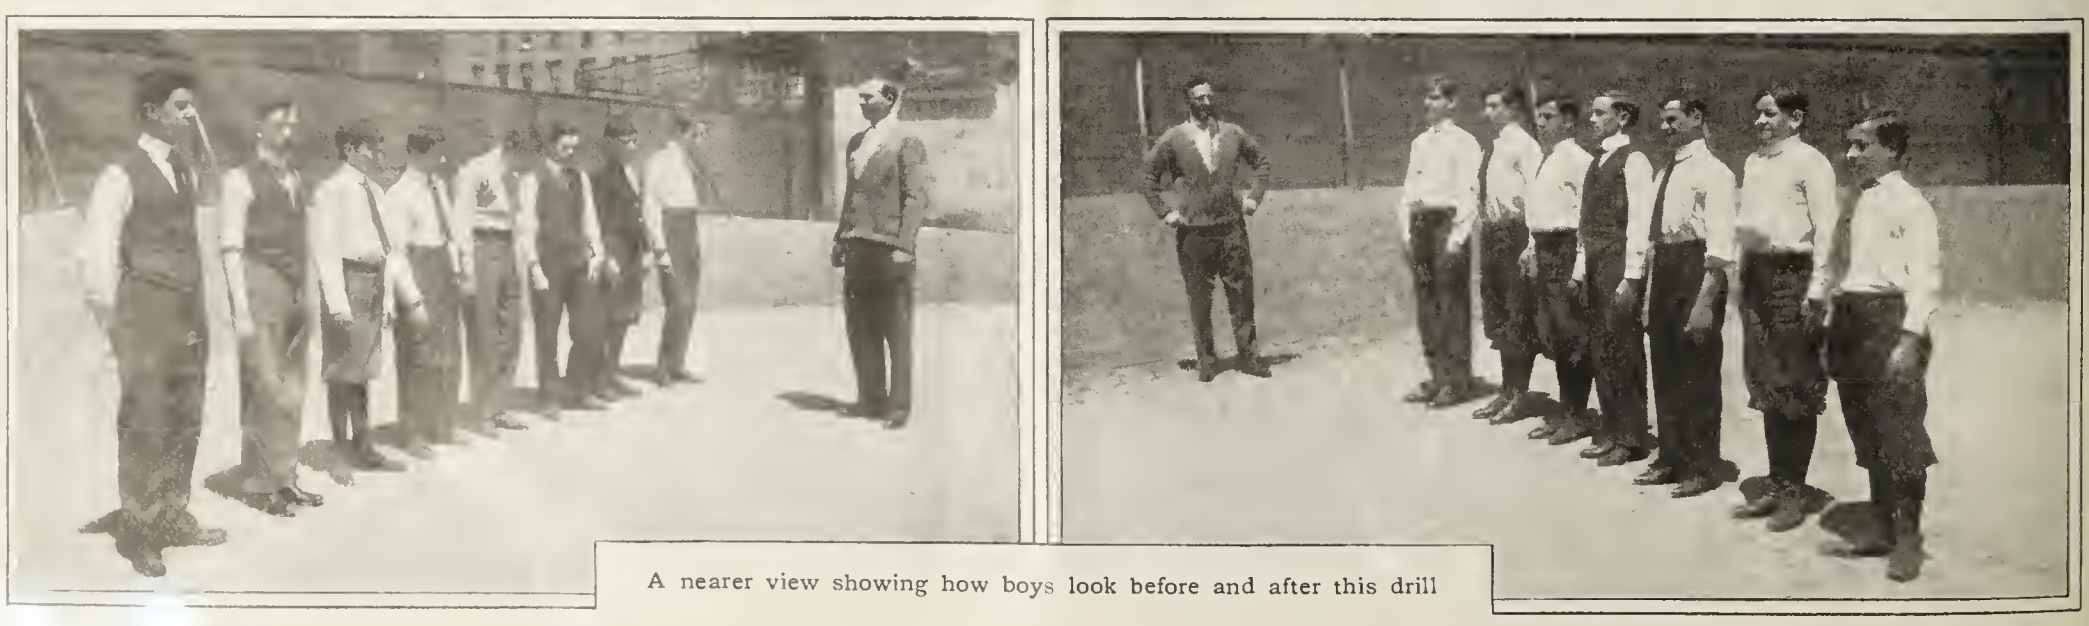


Now, with this new system of school athletics there are only two serious pitfalls possible. One is the gradual giving of first place to athletics, as happens in some colleges, instead of making body and mind equal running mates. The other is too much individual competition, tending to make egotists instead of sane men and women. But both these dangers are avoided by one simple thing. In our public schools the numbers are so great that there is no time, with the amount of study the law requires, to overdo on the play side. Neither is there time for individual competition to any extent, class work being the almost invariable rule. So it is not every boy for himself, but every boy for his class. When the boys are grown it will be every man for his country by the mere simple process of development, and the seventy per cent will have forgotten their foreign and diverse parentage, for they will have had, through all the formative years of childhood, the strongest possible influence toward unity—a common enthusiasm through working together for a common purpose.

A special badge, for boys only, is awarded to those who attain a standard of skill in diving and swimming

Athletic games were first introduced in the schools as an experiment. They were an after-school affair, and purely optional. Right here is the proof of their vital grip on the children. Such a clamor arose to join the players that a scholarship standard was made the price of admission. That and the better physical condition which resulted are what caused the twenty-five per cent rise in scholarship. Mark the progress. At first individuals studied in order to get in. Now classes study for the class honor. If a member begins to lag in his lessons, and so endangers the class standing by his possible removal from its teams, the other members attend to him. A laggard is taken around the corner and punished by his mates. A champion fell behind in his studies and was reported to the principal. "But," said the principal to me, "there was no need of my discipline—the boy's mates attended to it."

When the Board of Education had seen such results for two years there was only one intelligent course for it to take, the Public Schools' Athletic League was united to the city's system. Its direction became a part of the Board's work, and the athletic games were put on the school curriculum. All the children have access to the games, but those who would gain membership in the League must reach a certain standard. One hundred and seventy thousand have done this, and so become the city's athletes under direct supervision of government—the first time such a thing has occurred in the history of American civilization. Cared for and protected by the city, the young athletic patrol will one day care for and protect it. And the city, as mother cities should, rewards and marks those who do their best for her.



An open-air playground in one of New York's congested districts where boys are given free exercise—taking the hump from their shoulders and the slouch from their legs

Badges for Skill in Sports

THREE years ago badges were offered by the Board of Education for certain records in athletics. This was the result—two thousand the first year, four thousand the second, over seven thousand last year. That is the rate at which the badges have been claimed in these three years, a growth of over seventy-five per cent for the last year. In the first year of these contests it was common in an examination of four hundred boys to find less than six who could chin themselves four times on a bar. Last year over a third of the boys passed the test.

The work of training bodies inevitably brought recognition of the necessity for their cleanliness, so a new requirement was added to the list necessary for graduation—knowledge of the practical application of physical hygiene to one's person. The children of the congested regions, and those who form the seventy per cent of foreign parentage—they are not always clean! But now when a boy or girl enters the public school he or she is not only examined as to knowledge, but as to physical condition as well. Face, hair, teeth, nails are scrutinized, and if the child does not know how to attain cleanliness and keep clean, it is promptly taught. As to the League, the boys are stripped and examined for admission, and a curved spine or other defects are

A nearer view showing how boys look before and after this drill

promptly noted, and the proper exercise given for eradication. At the end of the term the children have their marks on cleanliness as well as on geography and arithmetic. The introduction of athletics, it seems, makes for cleanliness as well as for strength.

Perhaps what shows most clearly of all the intensity of the new conviction that bodies as well as brains require care is the breaking down of that strongest of American prejudices which declares for a Sunday of physical stagnation. The School Board has obtained the setting aside of certain city parks on Sundays where the boys may pursue their games and exercises. Play on Sunday! Yes, play, the game for manhood that must never cease.

A teacher in the most crowded school in New York tells of what the athletic games have done there. Many of the children, he says, are born of parents so overworked physically and underworked mentally that intelligence and soul seem to have gone out in them and not to have appeared at all in the children. When these receive their first instructions in the games they are like worn-out, castaway dolls, absolutely without response, emotion, or enthusiasm. Sometimes the change is gradual, sometimes startlingly sudden. The numb body is awakened by joy and harmonious activity, and surely as the seed awakens in sunshine and rain, soul and mind come out of their heavy dream, and a human being is reclaimed, the devitalized sad doll becomes the alert, erect, trained boy who wears his city's badge because he is a citizen worthy of honor.

Three Things Necessary

IT IS agreed that there are three things no boy should do between the ages of twelve and nineteen if he would reach his best development. He must not smoke, drink, nor keep late hours. What will prevent him? His teacher's telling him that it is naughty and that he'll be better some day if he doesn't? Scarcely. But if a boy knows that the breach of any of those "don'ts" will rule him off his team, the stars in their courses couldn't get him to commit the breach. Think of that! If every school in America had in its grasp that potent instrument, the team, then those "don'ts" would pass out of existence! But more than this. When those boys finish their seven years' school athletics, they are going to take the benefits with them. That doesn't mean that we are going to have a nation of athletes. But it does mean that to whatever sphere each boy goes he will take with him trained physique, balanced body and brain, and the spirit of the team—*i. e.*, work for the honor of all, rather than against the other for individual gain. At any rate, that seed will have been planted, and some day, where children now play for a trophy, men will play up—play hard!—play for the prize, a new American manhood. We shall not suffer from England's disease. The cure has already begun—the remedy is balance—and the pivot of balance is—play.

Upland Shooting Over Dogs

The Height of Delightful Outdoor Sport

By ERNEST McGAFFEY

PERHAPS the best reason for the popularity of upland game-bird shooting is its infinite variety, which embraces the finest combination of walking in woods and fields when Nature is in her happiest mood. Each season brings dozens of new sensations and scores of novel experiences to the sportsman. The birds act differently in different localities; they adapt themselves to circumstances, and, if closely hunted, adopt new measures to protect themselves. Grouse usually take the more direct line in their flight, and are so cunning as to often put a tree between their course and the man. Quail fly farther when the country is open, or where persistently followed. As the season lengthens, the sportsman will learn to read country as a child does a primer, slowly at first, but finally with a comprehensive glance that sees instantly the good territory and rejects poor cover. And he will find occasionally, to his surprise, a cock grouse springing from some apparently impossible bit of cover, or a bevy of quail crouched under bare oak scrub in the dead leaves which he is strolling away from while the dog is working the thickety hollow below. Always there is the lure of uncertainty.

Along old logging roads in the ruffed-grouse country you will generally find birds in the early morning or evening around the tops of fallen trees, in elder thickets at the edges of clearings, and sometimes along the lower mountainsides. Occasionally the birds plunge in headlong flight from the middle of a tall tree, and your chances for a score are about as one in fifty. After a full day's work you will be more than repaid with a brace and a half of the wary, splendid birds. Then there are the long tramps up the sides of ravines in the bracing air or in the cool seclusion of the old timber trails, where you take off your cap and walk bareheaded in the shadows.

Moderate Cost

IN QUAIL-SHOOTING you will be nearer the farms and fields, sometimes following the dog as the birds "road" ahead for a hundred yards or so, and again moving stealthily toward a game-concealing hedgerow, every nerve alive, expecting each moment to reveal a brown catapult springing into the air.

It is the joy of living and the maximum of delightful outdoor sport. Old orchards, hedges, cornfields where grass has grown up along the rows, thickety hollows in the midst of cornfields, wood-lots where hazel bushes have grown up, and blackberry briers, the edges of stubble fields, fence corners, especially when grown up in weeds, willow thickets, creek bottoms, clover pastures—these are where the cunning brown chaps lie, and only the practised eye can pick out the likely spots at one survey of the surroundings.

The novice who can make his first trips afield accompanied by a friend who is experienced is fortunate. But this is not essential. Nor is a course of trap-shooting necessary. Bird-shooting is absolutely different from practise at inanimate targets, and the best way to become a wing-shot is to shoot in the cover at the birds themselves. A great deal of this will be more or less "snap-shooting," and practise will bring it to a reasonable degree of skill.

The sport is one within the means of every man. A good, serviceable, double-barreled gun can be had for $30. A number of makes are in the market at around this figure. Coat, trousers, shell-vest, leggings, and stout shoes can be had for, say, $15 additional. The coat will last forever; at least, many old hunting coats seem to date from Adam's day. The shell-vest is indestructible. The trousers and shoes must be occasionally replaced. The gun will stand for a lifetime if any care at all is taken of it.

For an outlay of, say, $50 at the outside, then, a man is fitted to begin the sport. "But," says the inquirer, "how about the shells and the dog?" True enough. Shells for an entire season of sensible upland shooting will not cost over $3.50. A good pup, either setter or pointer, can be had for from $10 to $20. You can train him yourself, and get a vast deal of amusement and instruction doing it. A bird dog takes as naturally to hunting as a duck does to water, and a six or seven months' old pup of fairly good stock will often commence to find birds with astonishing precocity.

A "Fancy" Dog Not Necessary

IT IS a mistake to suppose that a man needs a high-priced dog for upland shooting. Many a good dog of blurred or no pedigree has acquitted himself wisely and well in the field; care and patience will evolve a reliable dog from very modest beginnings. The city or town is a poor place to keep a dog in, and it is best to arrange with some one to keep him in the neighborhood where you do your shooting. The gun for upland shooting should be a twelve-gage, bored cylinder in the right-hand barrel, and modified choke in the left.[1] Shoot with both eyes open, and learn to pull the trigger, or rather *press* the trigger, without nervous jerking. If you are in a country where there are a good many quail, and you are a beginner, let a bevy or two and some single birds flush without firing a shot, merely aiming your gun to get the direction and angle of their flight. Remember that a quail usually rises on the left and right quartering shots, and aim above as well as ahead of it. This holding ahead and over the bird will come as a matter of practise. The same way with the ruffed grouse.

Take any shot within a reasonable distance, and do not be afraid to use your ammunition in such practise. Don't hurry in your pursuit of a bevy of quail or a covey of grouse. Remember that some birds from a group may drop down before the main body alight and scatter, and you may be running over a good chance to pick up a single.

Don't hurry your dog either. Half a dozen quail and a couple of rabbits will make your game-pockets heavy enough. Make the actual shooting of the game one of the many incidents of the day, and never the main idea of your outing.

Cultivate the camera habit by all means. But don't overdo it. There is no such vital thrill in merely "taking pictures" as there is in studying the birds' habits and trailing them to their most carefully hidden cover.

The true sportsman is he who blends deep enjoyment of the woods and streams with practise of the art of wing-shooting: a manly accomplishment, bringing in its train rational enjoyment, skill of hand and eye, companionship of congenial comrade and dog, and a communion with outdoors at once healthful and inspiring.

Use smokeless powder. It gives the novice a chance to bring his second barrel to bear when he has missed with the first, and it gives the good shot a better chance to bring down "doubles."

As to sizes of shots, eights for quail, sixes for grouse. Don't let yourself be tempted to shoot a ruffed grouse on the "set." Even if an old cock has fooled you into following him for miles, and you finally locate him in a tree and could "pot" him, don't do it. Plant yourself firmly on the honorable stand of a wing-shot, and resist the "target" shots.

Keep your gun clean, and never shoot in thick cover unless you can *see* your companion. Always hunt with one person in preference to a crowd. Three is just one too many in upland shooting. Get acquainted with some farming community if you are intent on quail-shooting, and help stock their covers with additional birds sent in during the early spring months. If you are after grouse, pay a little to see that the game laws are enforced in your favorite locality. Keep in touch with game conditions in the neighborhood you hunt in, and, in general, take an interest in the sport.

A splendid bird exhibited for the envy of a less fortunate shooting companion

Plenty of Variety

UPLAND shooting is the cream of all bird-shooting. It has not the wearisome monotony of sitting cramped in a "blind" waiting for ducks, nor the stubborn slogging away through the wallows of the snipe marshes. It takes you through alternate wood and field, meadow and stream, and gives ample time to loaf, to observe, to philosophize, and to smoke. You do not have to exert yourself in particular; you are not after a medal. Whoever has drawn close to the staunch dog as he stands to a "point" in buckwheat patch or in cornfield or in brush heap has sensed a thrill of expectancy which not the most jaded can resist, placed as it is in a near perfect setting—the wine-pure air of the woodland, the glow of Indian summer.

Above and beyond all is the forgetting of everything but the immediate present: even as a man becomes expert with the gun and advanced in woodcraft, repeated surprises await him—the bevy of quail which would not act "right," the cock grouse that always took to the tree-tops, the occasional woodcock darting like a gold-brown streak through the thicket which you were tramping for quail, his phantom squeak mocking your hasty and ineffectual double shot as he disappeared from sight.

If you would indeed banish dull care to the limbo of complete oblivion, get a shotgun and take up wing-shooting for quail and grouse in the russet and tawny October days. Be a boy again, and laugh over your many misses and gloat secretly on your occasional center shots. See that cock grouse now! You killed him clean at fifty yards just as he passed that tree trunk, and mark how the good dog looks up as much as to say "That was my master."

[1] When you have become proficient you will, no doubt, adopt the sixteen or even twenty gage gun, as most sportsmen are doing. —[THE EDITOR.]

The Zeppelin III Passing Over the City of Cologne on Its Way Down the Rhine

On August 27-29, Count Zeppelin flew from Friedrichshafen to Berlin, descending at Bitterfeld and Nuremberg for repairs. His arrival at the capital—above which he maneuvered skilfully—was the occasion of an unprecedented ovation from hundreds of thousands of people. Upon his landing, the Kaiser embraced him with enthusiasm, and presented him to the Kaiserin, also to Wilbur Wright, the American aviator. The voyage lasted from 4:30 A. M., Friday, to 2 P. M., Sunday

Cavalry of the Air

The Advance of Aeronautic Science in Germany, and its Application to Future Wars

By ELMER ROBERTS

THE villagers living adjacent to the military balloon park at Tegel, near Berlin, accustomed for months now to the sudden rearing out of the enclosure of huge pointed cylinders driving away at twenty or thirty miles an hour, had a fresh thrill one recent rainy night by a succession of explosions in mid-air with vivid streams of flame tearing the low-lying clouds. The aeronautic battalion was working out a problem of defense. They had sown the air surrounding a supposed fortification with mines and were exploding them either with time fuses or electrical earth connections against the theoretical approach of a hostile aerial fleet.

The air-mine is for the protection of camps, squadrons, or fortifications during the night by making the air above them too dangerous to navigate because of mines at different elevations, so that, as in the defense of a harbor by mines invisible to the enemy, the passage through the air over troops or fleets may be uncertain in the dark. The air torpedo explodes by contact. Joined to the bursting charge are two cases holding compressed benzine and pure oxygen. The compressed benzine, gaseous and highly explosive, combines swiftly with the pure oxygen at the moment of explosion, producing intense heat and wide-spreading flames. The heat, the flame, and the bursting pressure cause the gas in the balloons to explode, or, in the case of aircraft of other varieties, would destroy the crews or disable the machine. Air-mines, transported from point to point in the field of action by torpedo-boats at sea or automobiles on land, can be released during the daytime in the path of airships with time fuses or exploded from below by electrical currents.

Air Navigation Beyond Experiment

THE active preparations, offensive and defensive, for warfare in the air by the German general staff is a certain indication of the conviction that air-navigation has gone beyond sport or experiment, and has become an instrument for the national defense, upon whose development many minds are at work and millions planned. The construction proceeds upon two main lines: the building of craft for mechanical flight capable of carrying several tons in men and material, and the preparation of engines for destroying such craft.

The Krupps, whose business is that of creating instruments of destruction, are turning out guns of two sorts, one for hurling burning projectiles a mile or more through the air, and another for throwing shells perpendicularly or at an angle. Naval gunners are at practise firing on captive balloons towed swiftly by torpedo-boats. Tacticians in both the military and naval arms are studying the utilization of air-craft in cooperation with land and sea forces. The studies in this direction began with the idea that for practical purposes the airship could be used for observation and recognizance only. The whole problem has widened. The experiments this summer are not only in the direction of stable and rapid flight, but in the arming of air-craft with light guns for use against other vessels in the air and in experiments with the discharge or dropping of explosives upon docks, warships, fortifications, arsenals, or camps. The German army steerable craft—the *Gross* and the *Zeppelin* and the privately-built dirigible, the *Parseval*—are each capable of carrying from one to four tons of explosives. Ballistic engineers are at work on the problem of directing explosives from airships, and the effects of merely dropping them upon steel surfaces or upon earthworks protecting artillery.

Theoretically, a ship such as the new model *Zeppelin*, with a radius of action of 1,426 miles, could rise from its harbor in Lake Constance, proceed to any European port, and during the night descend close to a *Dreadnought* and drop a ton of high explosive upon her, keeping only far enough away to escape the evil effects of the explosion. A *Zeppelin* can be built in about six weeks provided enough aluminum frames can be prepared. A *Gross* or a *Parseval* can be made ready for the air in about four weeks when the material factories are equipped. The next great land war, should it be deferred five or even only three years, will, in the opinion of German military writers, see employed a cavalry of the air—scouting, observing, raiding into the enemy's country, destroying a depot or throwing a city into confusion, and engaging the enemy's air fleets. As with cavalry screening an army, whose first duty is to beat or to occupy the attention of the opposing cavalry, so the air fleets, covering an advance, must engage or elude those of the enemy. The air once commanded, the operations of the land and sea forces would be simplified. The victory would doubtless remain with the men who could use the machinery well over those who would use it inefficiently. Thus the German would increase his present advantage over the Russian and the Russian over the Turk. The quality of the men who manage the air-craft must rise high above that of the foot or horse soldier.

New models are constantly reported. A German electrical company has a balloon of the non-rigid type nearly ready for a first voyage. Captain von Krogh, the former assistant of Count Zeppelin and later of Major Parseval, is the managing constructor, and although the details are protected with secrecy, some dimensions are known. The length is 329 feet, the diameter 43 feet, and the capacity 11,000 cubic meters.

An Airship of American Pine

AN IMMENSE construction built on the rigid system has been designed by Professor Schuette, the naval constructor of the Technical University at Dantzig. The body is about 330 feet long and 52 to 56 feet in diameter, with paraboloid ends. The framework will not be of aluminum, as in that of Count Zeppelin's structure, but of American pine, which has a specific gravity of one-eighth that of aluminum or one-twentieth that of steel. While the *Zeppelin* has a series of rigid rings connected by crosspieces, the wooden framework is made of staves running partly straight and partly in spindle form. The staves are hollow, made by gluing together four laths of six millimeters thickness. The strength of these staves is so great that an average-sized man can sit in the middle of one thirteen feet long, supported at the ends only, without breaking it. An allowance is made for 4,400 pounds of explosives. An advantage of

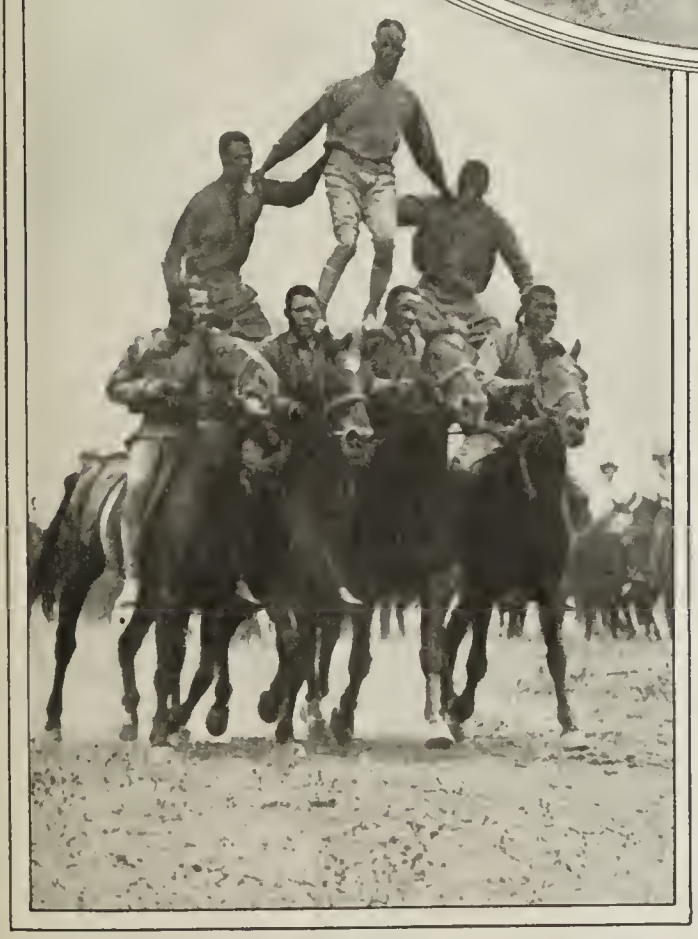
The Frontier Celebration at Cheyenne



THE Frontier Days celebration, at Cheyenne, Wyoming, this year eclipsed all previous exhibitions of the same sort. Opening with a crowd of 8,000 spectators, on August 18, the number rose to more than 20,000 on the closing day, August 21. Every form of horsemanship and frontier athletics was given a trial in the course of the four-day program. The carnival was set off with a galloping parade, composed of a thousand equestrians. On the same day was held a wild-horse race. Cow-pony and Indian pony contests, squaw races, relays, free-for-all and cow-girl races were followed by steer riding and steer roping matches. An exhibition was given of hitching and driving a wild horse. The Ninth Cavalry of negro troopers, detailed from Fort D. A. Russell, went through a number of skilful maneuvers; and the Indian tribes which attended performed their repertoire of war dances. The climax, toward which the interest of the carnival ascended, was the rough-riding final on Saturday, to decide who might rank as the "Champion Bronco Buster of the World." Seven men competed, but a new ruling of this year's officials, whereby spurs were disqualified, caused the spectators to protest against the result. Clayton Danks, on the bronco Steamboat, won the title. Richard Stanley, previous champion, who had traveled 2,000 miles to dispute the belt with all aspirants, was the favorite of the crowd; and because of the elimination of spurs he did not forfeit the loyalty of his adherents. For Steamboat, heretofore regarded as the most diabolical horse in the world, refused, without spurs, to extend himself

The Carnival of Man-Birds

TEN years ago if you had asked the casual passer-by which thing would first be done—the discovery of the North Pole by a sleigh ride of a couple of hundred miles, or (for three hours) driving through the sky an unwieldy hulk of metal and wood, loaded with a gasoline engine—and all of it heavier than the air it displaces—the wayfaring man would have said that the North Pole was an easy mark, but the aeroplane a dream. Reims week has made history for the aeroplanes. It is the first concourse of all sorts of heavier-than-air machines. This gathering, or, rather, hovering, has been attended by famous gentlemen, a few—the French President, the British Chancellor of the Exchequer. All nearby France has been on edge with aerial excitement. Many records were knocked sky-high. The French, light-weight and fiery, have always been good at cavalry charges and that sort of thing. And they attack the upper regions with the same zest and audacity with which they would spur into the cannon's mouth. It was their week, and the other great Powers trailed on after, several cloud-lengths behind. They have evidently determined to nationalize the aeroplanes. Bleriot was fined for reckless sky-driving, the second man in history to break loose in the empyrean. Phaeton was the first to be penalized. In height, Paulhan climbed the sky for five hundred feet, which would be a bit of a tumble. On time and distance, Paulhan was in the air 2 hours 43 minutes and 24 seconds, and covered 81.35 miles. A day later, Latham overcame his ill luck, which had included two baths in the English Channel, and flew over 96½ miles, devoting 2 hours and 18 minutes to the performance. On Friday Henry Farman, who has been in the background for the last year, flew 112½ miles in 3 hours 4 minutes 56 seconds, breaking the world's time and distance records. Incidentally he won a purse of $10,000. On Saturday, Glenn H. Curtiss, the American competitor, carried off the most important event of the meet—the twelve-mile speed race—and thereby won the International cup and a bonus of $5,000

Bi-planes drawn up at the starting point, in the International Aviation Meet, held at Reims, France, during the week of August 22-29

What the World Is Doing

A Record of Current Events

The Week

LATE despatches from Melilla agree that the Moors are ready for a long-continued guerrilla warfare. If Spain is harassed in the field, she has been swiftly successful in quelling rebellion at home. "The sanguinary outbreak in Barcelona has been put down as promptly as if the Berlin garrison were quelling the turbulent operatives of some great factory. Spain set an example of capacity which many another government might study to its advantage."

"Before the great Day of Pheasants," the Lords began to flee from the face of the budget, like the Egyptians before the Red Sea. And there seems small likelihood of their attempting to quench the English nation's enthusiasm for the finance bill. In the House of Commons, through the press, and by public meeting, the opposition may make known its will and strength. The House of Lords in time past have not had control over finance. If they assert themselves, save their estates intact, and reject the budget, they will commit a revolutionary act.

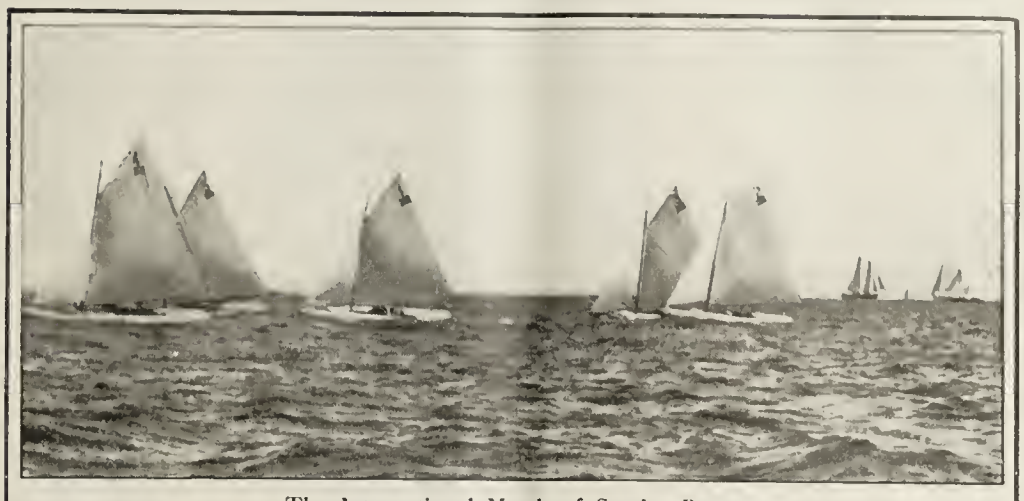
Professor Dr. Adolf Harnack, in a recent address on "International and National Christian Literature," stated that "It is very much easier to produce six brilliant scientific treatises than to deliver or write one sermon which is timeless."

In a week of records at Reims, France, Glenn H. Curtiss, the American flier, took the chief prize of aviation week. In a speed contest for aeroplanes over two rounds of the area, a distance of 12.42 miles, his time was 15 minutes 50 3-5 seconds. By his victory he brings the international aviation competitions of next year to America. On the final day of the meet Curtiss added the three-lap speed prize to his International Cup of Aviation.

The West Indies hurricane in the last days of August laid waste a portion of the Mexican coast. The city of Monterey was partly submerged, Indian villages were wiped out, 1,200 persons were killed in the flood, 5,000 houses were destroyed, and property was wrecked to the extent of $7,000,000. Some thousands of square miles of territory were submerged and 20,000 persons rendered homeless.

The President is leading a busy semi-official and golfing life at Beverly, Massachusetts, which, if it lacks the salient and picturesque features of the daily régime of his predecessor, is yet regarded with affection and respect by the mass of his fellow countrymen. Above all, he is resting and preparing for his fall tour to the West, Middle West, and South.

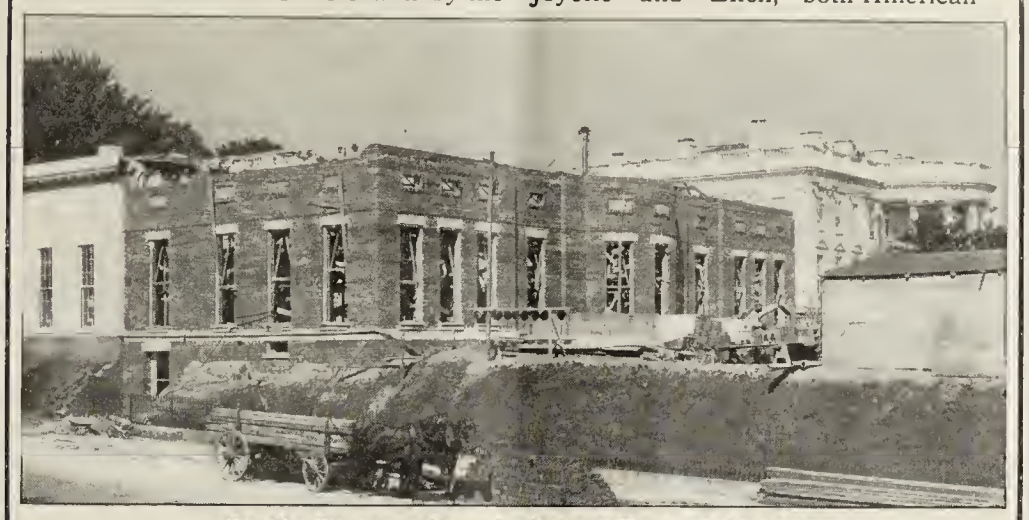
After taking the baths and waters in approved continental fashion, E. H. Harriman has returned from Europe to his home in Arden, New York, in a blare of publicity. What made his return an event was the rumor, no longer credited, that he was permanently disabled from activity in high finance.



For the fifth time William A. Larned proved himself the national lawn tennis champion of America. On August 27, at Newport, he defeated William J. Clothier.

William Williams, Commissioner of Immigration, continues to probe the departments of Ellis Island. The efficiency test is a live thing in his administration. His latest winnowing is into the contract for ten, twenty, and thirty cent lunches, as supplied to immigrants.

New candidates are suggested each day for the Mayoralty of New York. Among those in the midsummer running on both sides are Judge Gaynor, General Bingham, and Theodore Roosevelt. There will be a new crop each morning till convention time. The campaign issue will be the efficiency or inefficiency of the Tammany administration.



Governor Hughes has removed Louis F. Haffen, President of the Borough of the Bronx, New York City, for misconduct in office and neglect of duty.

The strike at McKee's Rocks, near Pittsburg, is proceeding in a thoroughly unsatisfactory way. The company—the Pressed Steel Car Company—refuses to arbitrate or discuss the points at issue—the sweeping reduction of wages, the pooling system of pay. The strikers are rioting. There are charges and counter-charges, as, for instance, that some of the strike-breakers are living in a state of peonage, being kept inside the company's stockades against their will.

The International Match of Sonder Boats

The start of the series, August 30, at Marblehead, Massachusetts, in which three American craft met three from Germany, for the President Taft Cup. The first two races were won by the "Joyette" and "Ellen," both American

On the Stamping Ground of the "Tennis Cabinet"

The addition now being built to the White House offices, covers the tennis court where President Roosevelt and his cabinet played many famous games

Rioters of the Pennsylvania Steel Strike Under Arrest

Several men, including soldiers and deputy sheriffs, have been shot and killed by the strikers. They have gone armed with revolvers and clubs.

A Council of the Strikers at McKee's Rocks

The strike of the pressed steel workers at McKee's Rocks, near Pittsburg, involves several thousand men, principally foreigners. A portion of the men have been told that they could return to work, but they refused to abandon their six hundred leaders who were irrevocably discharged by their employers

A Cure for Strikes

WITH the air full of strikes and the rumors of strikes, Charles W. Eliot, ex-president of Harvard University, has come forward with a constructive suggestion. He calls his short article in the September "McClure's" "The Best Way to Prevent Industrial Warfare," and in it he tells of the success achieved by a Canadian act called the Industrial Disputes Investigation Act, which went into effect on March 22, 1907.

"The chief feature of the beneficent Canadian act called the Industrial Disputes Investigation Act was the requirement that, in the event of a dispute arising in any industry known as a public utility, it should be illegal to resort to a strike or lockout until the matters in dispute had been made the subject of an investigation before a board of conciliation and investigation, to be established under specified rules by the Canadian Minister of Labor. Under this act either party to a dispute may apply for the appointment of a board of investigation. Each of the two parties to the dispute may nominate one member of the board, and these two may select the third who serves as chairman of the board of three. If either party fails to nominate a member, the Minister of Labor appoints that member; and if the two members fail to agree upon the third member, the Minister appoints the third member. The board will therefore inevitably be constituted, and will go to work if either party to the dispute applies for an investigation."

"On the fifty-five applications received, strikes were avoided or ended in twenty-five coal mines and four metalliferous mines; in fifteen railroads and three street railways; in two bodies of longshoremen; in one body of teamsters and in one body of sailors; and in two industries not public utilities. There were two cases in which strikes were not averted or ended. Only two cases, therefore, out of fifty-five ultimately resulted in strikes."

Of the fifty-five applications for the appointment of boards, seven were made by employers, forty-six by employees, and two by both employers and employees.

"It is the best piece of legislation in the world for the prevention and settlement of lockouts and strikes in an important class of industries which, in the interest of the nation as a whole, ought never to be interrupted."

Jerome

JEROME'S "game" appearance on the Cooper Union platform in New York to face all questions and accusers has undoubtedly worked a change in the mind of the public on him and his career. The newspapers have been less bitter, and street-corner comment is more evenly divided as to the extent of his honesty and efficiency. The question that bit the deepest and that most snugly fitted one element of the popular feeling was that of there being in his office one law for the rich man and another law for the poor man. It will take an election to find out how completely he has allayed skepticism on this point.

Jerome has just announced his candidacy for a third term as District Attorney. On August 23 he stated he would seek a renomination by petition. He said:

"After having received for nearly eight years the honor and benefit of this office, it seems to me I should be guided in my determination, not by what may seem most to serve my personal interest, but by the consideration of whether a majority of the electors desire that I should further serve them in this position.

"I know of no way in which I can ascertain this except by offering myself as a candidate, and I have decided to seek again a nomination by petition, and to offer myself as a candidate for election to the office of District Attorney of New York County."

What he will run on, then, is his record. His record will be searched on such elements as these:

Has he conducted an efficient office, with swift justice for the multitude of small cases dealing with the lives of the poor?

Has he protected the community in prosecuting the sensational cases of murder and "robbery" where the wealth or social position of the offender tended to give him access to the "immunity bath"?

Has he reached out after [illegible]

Madam, you need never sweep nor dust again

A Free Trial

of the Duntley Pneumatic Cleaner in your own home will convince you that it will do the work ten times quicker, ten times easier and ten times better.

Rugs and carpets are cleaned *on the floor*, and the furniture is not disturbed.

Think what it will mean to you—day after day—year after year—to have your entire home spotlessly clean and sweet, purged of the disease germs that swarm in the dust—germs of consumption, pneumonia and diphtheria. Not just twice a year, but every day—*all the time*.

And it is so *easy* to clean house with the Duntley Pneumatic Cleaner. The drudgery and confusion are all gone. There is not enough labor left to tire a child.

The Duntley Pneumatic Cleaner makes housecleaning the work of a few minutes, instead of many hours, and costs to operate less than 3c an hour.

And I am willing to prove all this to you at my own expense. I will send you a cleaner for a *free trial* in your home, no matter where you live. You may use it and test it severely. It will speak for itself.

I am not afraid to send the Duntley Pneumatic Cleaner a thousand miles away and let it tell its own story.

I am willing to do even more. If you wish to keep it after you have tried it, I will give you a *year* in which to pay for it —*a whole year to prove its merit*.

I gladly make this offer, because I *know* the machine is reliable and durable, and that the people who buy it on small monthly payments will *keep* it, for the *longer* they use it the *more* they will like it.

Fill out the coupon below, and let me send you our booklet on scientific housecleaning.

A Business of Your Own with

Duntley Pneumatic Cleaners

On the Pay-from-Profit Plan

To those who wish to earn $5 a day and upwards, by cleaning for others and taking orders for Duntley Cleaners, we offer a fine and permanent arrangement. It enables you to engage in a most profitable business of your own.

By this plan you have *three separate ways* of making money easily and quickly—by cleaning for profit—by renting—and by selling Duntley Cleaners to those who will want to buy after you have done work for them.

To *prove* what you can do, we send you the machine, instruct you in its use, advertise you and put you in business. Before you invest a cent you get the free use of the machine and *actually begin making money*.

You therefore take no possible risk.

Fill in the coupon below—right now, before you forget—and let me tell you all about it.

...ERTISEMENT PLEASE MENTION COLLIER'S

forms of graft by which a county is robbed in a wholesale but subtle way through such means as the manipulation of public utilities, and for whose prosecution legal and intellectual ingenuity and unfatigued perseverance are needed?

As a public official, has he been a clean, wholesome influence in the community?

It is Jerome's delight to play a lone hand. He once compared himself to a wildcat engine. He loves the exhilaration of the unexpected move, astonishing the crowd and then winning it. After suffering a furious blast of vituperation and ridicule for two years from several newspapers and a portion of the public, few men would have had the "poker nerve" to run again, and to flash into the lists with so naive, sincere, and characteristic an announcement.

Slave-Grown Cocoa

THE Anti-Slavery and Aborigines' Protection Society of England are about to send Joseph Burtt to the United States. He is the man who discovered Portuguese cocoa to be slave-grown. He will make known the facts and arouse public opinion. The difficulty is to know which brand of cocoa is slave-grown. It comes in tins or cakes, labeled by an American or Dutch manufacturer, and the wholesale and retail dealers are often uninformed as to whether it is guilty or not.

The London "Spectator" says editorially:

"We are delighted to hear that Mr. Burtt is to visit America so soon, and we trust that he will be able to convince the people of the United States that it is their duty to join in making the planters of San Thomé and Principe understand that they must alter a system which, as at present organized, leads directly to slave-raiding and slave-trading on the mainland. We venture to say that a very few years after the planters have been obliged to have recourse to free labor they will wonder how they ever endured a system so inefficient, as well as fraught with such evil consequences, as that which now prevails in the islands."

Votes for Women

WITH one of the nation's great citizens on the platform, the suffrage meeting in Newport added influence to sensation. It was held in that impregnable fastness of "high life," Marble House. Mrs. O. H. P. Belmont was the hostess. A tent had been slung up, with seats for five hundred. The two speakers were the veterans of the suffrage movement, Julia Ward Howe and Anna Shaw.

Mrs. Howe said:

"The change that I have seen in the position of woman in the ninety years of my life is something miraculous. I remember the colleges, where no one would have thought of inviting us, and now how welcome women are to the women's colleges and coeducational colleges. The many professions that are open to women, that never were thought of then, have increased, and are increasing every year, and women are better friends with each other because they so much better understand each other.

"Men used to say 'women can not reason, women have no logic,' but always when a woman amounted to something—they would say that that woman was an exception.

"We used to believe that once, but then we could not believe it any more, because we knew better. A man would say, 'Madame is an exception,' but I lost illusion in regard to my own superiority and realized that the majority of the women were also capable of intellectuality. The world will be very enlarged for us when we appreciate what women really are.

"We are coming to find out what the capacity of the real woman really is, that she is making up for the centuries of waste behind her."

Tips for Gamblers

THE D. Smythe Company of Newark, Missouri, has favored us with generous offers for skinning at dice and cards. It issues a "private price list—dice and card work a specialty."

"SET NO. 36—COMBINATION

"This is the best set of dice ever put on the market for a fading game. With a set of these dice in your pocket you are sure that every piece of money that you get up against (either banker or player) is going to be transferred to your own purse.

"On three shakes you are sure of four of a kind, and one-half of the time you can get five of a kind."

"Electric Magnet and Dice. The magnet, being placed under the bar or table, can not be detected in any way, and to throw a full hand you have only to press the secret button and throw the dice out natu-

The Best Fall and Winter Hose Are "Holeproof"

You don't know what hose comfort and satisfaction are until you have worn Holeproof Hose—*genuine* "Holeproof."

Six pairs wear six months, absolutely free from rips, tears and holes, or you get new hose free.

The whole family can have "Holeproof"—father, mother, daughter and son.

The hose are soft and attractive—made from highest grade cotton costing an average of 63c per pound.

We have had 31 years of experience. We made the first guaranteed hose on the market.

You don't want an amateur make when genuine "Holeproof" don't cost a cent more. Look for "Holeproof" on the toe.

The genuine is sold in your town. We'll send you the dealers' names on request or we'll ship direct where we have no dealer, charges prepaid, on receipt of remittance.

Holeproof Sox—6 pairs, $1.50. Medium and light weight. Black, black with white feet, light and dark tan, navy blue, pearl gray, lavender, light blue, green, gun-metal and mode. Sizes 9 to 12. 6 pairs of a size and weight in a box. All one color or assorted, as desired.

Holeproof Sox (extra light weight) 6 pairs, $2. Mercerized. Same colors as above.

Holeproof Lustre-Sox—6 pairs, $3. Finished like silk. Extra light weight. Black, navy blue, light and dark tan, pearl gray, lavender, light blue, green, gun-metal, flesh color and mode. Sizes, 9 to 12.

Holeproof Full-Fashioned Sox—6 pairs, $3. Same colors and sizes as lustre-sox.

Holeproof Stockings—6 pairs, $2. Medium weight. Black, tan, and black with white feet. Pearl gray, lavender, light blue and navy blue. Sizes 8 to 11.

Holeproof Lustre-Stockings—6 pairs, $3. Finished like silk. Extra light weight. Tan, black, pearl gray, lavender, light blue and navy blue. Sizes, 8 to 11.

Boys' Holeproof Stockings—6 pairs, $3. Black and tan. Reinforced knee, heel and toe. Sizes, 5 to 11.

Misses' Holeproof Stockings—6 pairs, $3. Black and tan. Specially reinforced knee, heel and toe. Sizes, 5 to 9½. These are the best children's hose made today.

Fall Painting

Means Economy and Winter Comfort

Winter is Hard on the Home. The rain and snow, sleet and ice penetrate unprotected surfaces, and when Spring comes moisture and decay have done their deadly work. Winter's mud grinds your floors. Winter's soot blackens your walls. Winter's steam discolors the finish of woodwork and furniture. Winter plays havoc with all surfaces of the home *unless they are protected* with the right paint or finish.

A coat of good paint *now* will protect your building. The proper finish will make your floors easy to clean and prevent them from wearing white. A coat of No-Lustre Finish will give your walls a beautiful finish, which can be kept clean by the occasional use of a damp cloth. Furniture and woodwork can easily be made soot-proof and moisture-proof by any inexperienced housewife.

Go to your paint dealer, tell him just what surfaces need refinishing and ask for the proper

ACME QUALITY

PAINTS, ENAMELS, STAINS AND VARNISHES

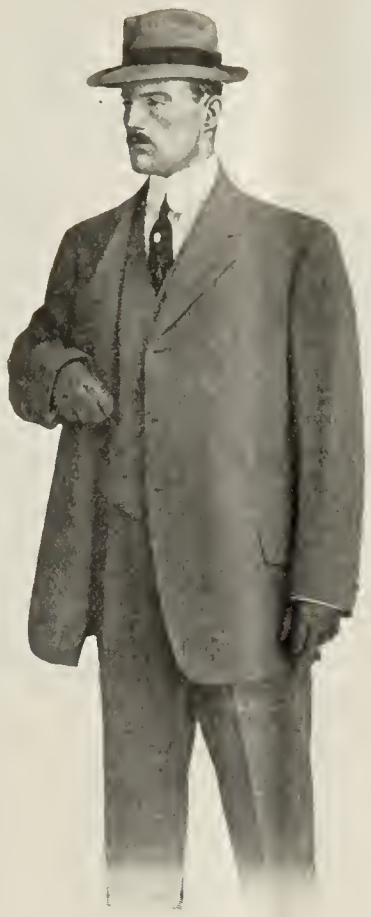
for the purpose. If you get the Acme Quality Kind you can feel satisfied that you are getting the very best. The Acme Quality Trade Mark on a package of paint, enamel, stain or varnish is like our signature to a check.

The following four Acme Quality Specialties are excellent examples:

Acme Quality No-Lustre Finish. A beautiful, lustreless, washable finish for walls and woodwork.

Acme Quality House Paint (New Era)—Result of a quarter century of scientific research and practical tests.

Acme Quality Varno-Lac—Best quality stain and varnish combined. For floors, furniture and woodwork.



Acme Quality Floor Paint (Granite)—Hard, durable, quick-drying floor paint, saves labor and backache.

How to Get the Effect You Want. The Acme Quality Text Book on Paints and Finishes tells how to secure any desired finish on floors, walls, woodwork, furniture or on the outside of the house or barn. It not only enables you to tell your painter or decorator exactly what you want, but makes it easy for *you* to refinish the many surfaces about the home that do not require the skill of the expert.

Show your dealer this advertisement and he will give you one of these books, or write us and we will mail one FREE. Address Dept. P.

The Stein-Bloch

World-Wide Styles

THE Stein-Bloch clothes are ready. This is an announcement which every Fall and every Spring has unusual interest for many men. It is the date on the clothes calendar which has a red mark around it.

Since last Fall's announcement Stein-Bloch clothes have had a triumph in England. One of the most fashionable of London merchants began offering them exclusively to his patrons in England last Spring, and they have been accepted as correct for English wear.

The present success of Stein-Bloch clothes abroad is a justification of your judgment. We have always told you that these styles and fabrics represent the best that both America and England produced.

Yet these clothes are not expensive. They will make no demands you cannot afford upon your purse.

They are ready for you at the leading clothiers in your own community—and "Smartness," presenting these styles, will be mailed to you on receipt of a postal request. Try on these clothes.

ral and the magnet does the work. The dice are perfectly natural and not even the smartest gambler can tell that there is anything wrong with them."

Their hints contain real philosophy.

"Do not expect a set of crap dice to win every bet: they will not do it."

"Do not order your dice made too strong if you wish to hold your play."

Another of their specialties is:

"Whisky without a still. You can make it yourself at your own home, costing only about thirty cents a gallon. Our secret process tells you how."

Still another of their activities is the vending of impure literature.

That they may mix the hypocrite with the crook, they issue for a dollar the "Sealed Book," which "exposes schemes and swindles." Every person ordering it must state in his letter that the book is "ordered in good faith for the purpose of your own protection against gambling and gambling devices."

Grover Cleveland

RICHARD WATSON GILDER, editor of the "Century," is publishing reminiscences of Grover Cleveland. Of the famous dinner at the Hotel Victoria in New York, during the campaign of 1892, when Cleveland was reported to have placed the New York appointments at the disposal of Tammany Hall, Mr. Gilder writes:

"Mr. Cleveland never told me just what happened: but I was told by one who was there that when a certain politician made the demand of a written pledge Mr. Cleveland flamed up, and, bringing his fist down on the table with a crash, declared that rather than do what was asked of him he would suffer damnation!

"Mr. Cleveland was decidedly a party man. I sometimes had an amused suspicion that although he admired and was grateful to the Independents who came to his support more than once, and although he felt a keen moral sympathy with them and gave some of them his intimate friendship, the fact that they had been Republicans and might easily become Republicans again was just a slight regret in his mind. When off on some inland fishing expedition he fell in with an old-time Democratic farmer, especially one who was faithful to what the President considered 'sound Democratic doctrine,' he warmed up to the old fellow amazingly. I do not believe he ever voted for a candidate outside of his party."

That the name of Cleveland be not forgotten, a news despatch in the New York "Times" says:

"'Clevelandia,' in honor of former President Cleveland, is to be the name of the municipality of Bella Vista de Palma, Brazil. This homage is paid to Mr. Cleveland because of his services as arbiter of the question of boundary lines between Brazil and the Argentine Republic."

Leveling the Guns on Cannon

THE Czar of Russia may be colorless and the new Sultan an amiable blur, but there is at least one autocrat with the bark on. His name is Joseph Cannon, and he is Speaker of the House of Representatives. His personality is sufficiently accented to interest his friends and enemies. The latest attack on him has just been made in a series of letters written by Charles N. Fowler, a member of Congress from New Jersey, who was deposed from his position as chairman of the Committee on Banking and Currency by the Speaker.

He says of the Speaker's attitude on the Aldrich Currency bill: "I challenge you to find a single living man with so rotten a record (on financial and currency legislation). It is a record of ignorance or political cowardice or a disgraceful hybrid of the two."

He speaks of "a 'hog combine' which controls the places of patronage"; and gently deprecates "'Cannonism' with all its corrupting, degrading, and paralyzing influences."

He further says: "You revel in a glut of brutal power like Nero to terrorize your subjects. Has it occurred to you that you are so intoxicated with your power and so blinded by your conceit that you have come to consider it a divine right founded on that motto of despotism, 'The King can do no wrong'?

"I have gone into these details to lay bare your miserable, contemptible false pretense and to expose your duplicity, treachery, and perfidy to that legislative body over which you preside, whose bill you were bound to defend and not destroy."

It is a pity that in the energy of these whirling phrases, no character sketch of the Speaker emerges. The words read like sincere but flat-sided blows, lacking the stabbing quality of General Bingham's portrayal of Mayor McClellan.

Quick and Sure

Remington

AUTOLOADING RIFLE

You can shoot it 5 times "quick as you can think." You pull and release the trigger for each shot— the recoil does the rest.

It is wonderfully accurate, too. And when you hit your game, it is yours because every shot is equal to a one-ton blow.

Like modern military rifles, the action is locked by a turning bolt. But a Remington is the ***only rifle in the world*** which encases this *locked bolt* action in a ***Solid Breech Hammerless steel frame.*** And moreover, the Remington **loads itself.**

Take a modern Remington with you. Made in .25, .30-30, .32 and .35 Rem. calibres.

"Big Enough for the Biggest Game" Circular upon request.

SPAULDING'S FETHER-LYTE VENTILATED SHOE TREES

FETHER-LYTES ARE ALL RIGHT

ALL THE STRENGTH OF WOODEN TREES WITH ONLY 1/4 THEIR WEIGHT

The minute you put your eyes on this tree, you will like it, and when you try it in your shoe you will buy it, because it is the lightest, airiest, simplest, strongest and best shoe tree made. Your own reasoning will tell you so.

Actual Photo of **Wooden Trees. See Fether-Lytes** on other side and **note difference in weight**

Send for Booklet That Shows the Nine Different Models That Fit All Lasts

LIGHTNESS These trees are formed from a specially prepared fiber that gives them great strength and rigidity, and at the same time allows them to be as light as a feather; only 1/4 the weight of wooden trees. This lightness is a great convenience in handling them, and if you travel, they will meet with your instant approval. No others will suit you. While very light they will put a curled shoe into perfect form.

VENTILATION The hollow construction of these trees means perfect freedom for air circulation. It permits all moisture and perspiration to evaporate rapidly, and your shoe dries quickly into perfect shape.

ADJUSTMENT Here is another point you will like. Very simple. A downward pressure pushes the tree in proper place, and secures absolute rigidity. An easy, upward pull releases the tree instantly. No vexatious sticking or binding or any wrenching, jamming or twisting. It is the work of a second to adjust the length to fit half sizes.

HOW TO GET THEM As this is a new tree your dealer may not have it, but ask him to get it for you. If he will not, send to us and we will send you booklet showing styles and giving instructions how to order direct of us. The price is $1.00 prepaid.

How to Get 4 PICTURES (IN COLORS) FREE

TO every reader of this periodical who is interested in nature or animals or out-door life we will send, without charge, these four beautiful pictures, which retail at 50 cents each. They are printed on heavy art paper, without lettering, and are unusually good examples of the art of color photography. Framed at moderate cost, they will make excellent decorations for your home, or they can be used just as they are. Exact size 10½ x 7½ ins.

WHY WE MAKE THIS OFFER

We send these pictures to advertise our **Standard Library of Natural History,** which has just been completed after years of labor and at enormous expense. It contains over 2,000 illustrations from actual photographs—secured in many cases by special expeditions to foreign lands. It is the only thoroughly readable and entertaining work of its kind in existence. The salient facts about animals are told in graphic, untechnical fashion by eminent authorities. *Experts and the camera have made this book, and in it "nature-fakers" have had no part.*

NO OBLIGATION

Your application for the pictures imposes no obligation to purchase the Library. We will forward the pictures, with a description of the book by mail postpaid. You will not be bothered by agents or canvassers.

As an evidence of good faith enclose 10 cents (stamps or silver) for postage and wrapping. This will be refunded if you request it after examining the pictures. Mail the accompanying coupon promptly, as the supply of pictures is limited.

THE UNIVERSITY SOCIETY
44-60 East 23rd Street
NEW YORK CITY

The University Society, New York

Please send me, postpaid, the four pictures you offer, with a description of the "Standard Library of Natural History." I enclose 10 cents for postage and wrapping, which you agree to refund if I am not perfectly satisfied. It is understood that the sending of this coupon does not in any way bind me to buy anything.

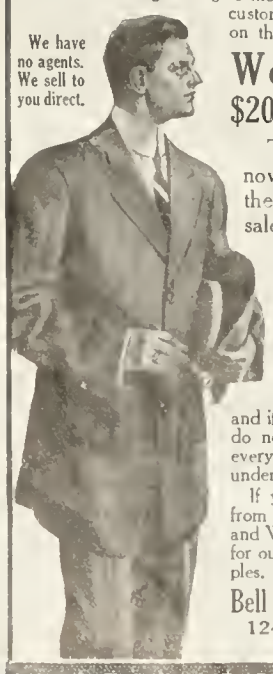
$20 SUIT or OVERCOAT made to order $13.50

Thousands of men who have learned the economy and superiority of the Bell Tailors Made-To-Measure tailoring are awaiting this important announcement: Our



Fall and Winter Catalog is Ready With 64 Handsome Samples— FREE

If you do not know the Bell Tailors as well as you should, the best way to judge our efficiency is to send for our Fall and Winter style book —a large beautiful illustrated fashion magazine.

It contains sixty-four liberal size, fashionable suit and overcoat samples. It explains how we are able to undersell competition by at least 33⅓%.

We also send you a self-measuring outfit. We adopted this system of self-measuring when we did away with all our agents through whom we sold our clothing. We eliminated the agent to give more intelligent service to our customers, and save them money on the smartest N. Y. Clothes.

We have no agents. We sell to you direct.

We Guarantee $20 Clothes for $13.50

The suit or overcoat we now make for $13.50 is the same that we wholesale to our agent for $13.50. It is the garment that our agent resold for $20.00.

Our fabrics are from the best mills in the land. The style and tailoring is perfect throughout. In fact, Bell Tailoring is guaranteed, and if the clothes when delivered do not entirely please you in every respect, you are positively under no obligation to keep them.

If you are interested in saving from 25% to 50% on your Fall and Winter clothes, send at once for our Free style book and samples. Address Dept. L.

Bell Tailors of New York

BELL TAILORS of NEW YORK

Cavalry of the Air

(Concluded from page 18)

the wooden construction is that it can not conduct or excite electrical currents, expand by heat, contract by cold, nor sweat as metals do under changes of temperatures. The speed is calculated at forty-five to fifty miles an hour, attained by three 150-horsepower motors. From the huge cylinder will swing a gondola shaped like a ship's hull, 131 feet long by 13 feet wide.

Special machinery is being built by a Hamburg hard-rubber company for vulcanizing a rigid envelope for a vacuum airship designed by Otto Prill, a contractor and builder in Hamburg. The construction will be very expensive, but as Prill is a man of wealth with faith in his ideas, he will proceed with the work. The pointed cylinder will be 650 feet long and 59 feet in diameter. It will be capable of carrying 19,800 pounds, exclusive of the motors. Prill has in hand also a semi-rigid airship built in twenty-four compartments, with a steel framing that he affirms is lighter for equal strength than Zeppelin's aluminum frame. The Prill frame has a weight of 7,700 pounds. The Zeppelin of the same strength would weigh 13,200 pounds. The estimate is that the Prill semi-rigid can carry a load of 30,600 pounds, exclusive of gondolas and motors. The radius of action is estimated at 3,480 miles.

An Air Automobile

THE Berlin Air Navigation Study Company (*Motor Luftschiffahrt Studien Gesellschaft*), an association of rich manufacturers and bankers, formed at the instance of the Emperor to promote as a national service studies and experiments in aviation, is working among its various activities upon a comparatively moderate-priced dirigible for sporting and pleasure purposes. The endeavor is to put upon the market, and there seems no insurmountable obstacle, an automobile of the air for about the price of a good land type. The aims are, simplicity in driving mechanism, moderate speed and endurance, small gas volume, and room for a chauffeur and seats for three or four persons.

A long excursion overland would be possible with landings from time to time for refilling the benzine tanks or, if the diminishing buoyancy should require it, more hydrogen. The charm of such excursions, the magnificent panoramas, the restfulness and added sense of power, will probably make the air auto sought for as soon as a few adventurous rich young men have taken the edge off the popular idea of danger. The *Zeppelin*, the *Gross*, the *Parseval* dirigibles have been developed without the loss of a life and with few acidents to the workers with and upon them. The emotion of a first flight in the air is a poignant one, and the sensation, once enjoyed, is universally sought again.

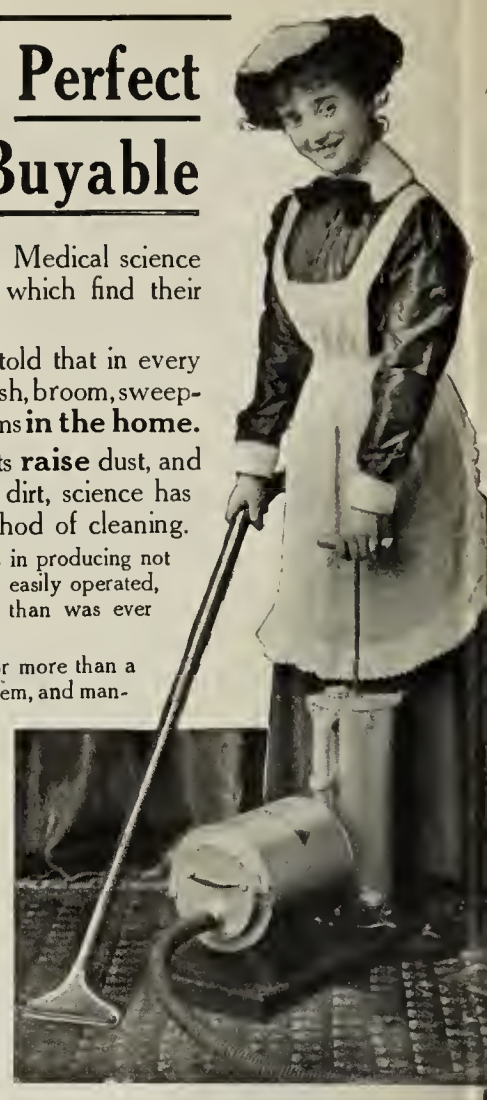
The new balloon of Major von Parseval, or rather of the Parseval design for it, executed with the capital of the Study Company, has a gondola arranged for carrying sixteen passengers. The managers of the International Aeronautical Exposition, which opens at Frankfort in July, have arranged for excursions from Frankfort to other cities in the Rhineland, from fifty to seventy-five miles distant.

Thrilling the Imagination

THE German aeronauts feel that, although they have gone farther than those of other nationalities in steerable balloon craft, they have not turned out anything in the aeroplane line that is equal to the double planes of the Wrights. But German engineers are working on no fewer than eleven flying machines heavier than air. The Study Company is developing monoplanes under Parseval's supervision.

High confidence and a singularly delightful enthusiasm is the mood in which the pioneers of this new construction science approach their work. The Aero Club in Berlin has brought together technical, highly schooled adventurers into the unknown who, with intense concentration upon perplexities in mechanics, yet see a vision of a larger future with another power added to the race. They think little of war, little of creating machines merely for doing harm to alien peoples. That idea draws influence, money, opportunity to their aid. The aeronauts are driven by the inspiration of mental conquests over material difficulties. The abolition of frontiers is in their thought rather than the building them higher. They work now in a congenial atmosphere. They have thrilled the imagination and pride of the German people, and have a background of sympathetic feeling that, during a period when national finances are pinched, draws liberal appropriations from Parliament and generous contributions from private individuals.

The Lowest Priced Perfect Suction Cleaner Buyable



¶ A **cleanly** home is a **healthy** home. Medical science is a continual battle against disease germs which find their natural homes in **DIRT** and **DUST.**

¶ No husband—no housewife—need be told that in every American home is waged a daily war with brush, broom, sweeper and duster against dirt, dust and disease germs **in the home.**

¶ And because these household implements **raise** dust, and **cannot** do more than clean **some** of the dirt, science has solved the question with the **suction** method of cleaning.

¶ We have succeeded by long study and experiments in producing not only a perfect suction cleaner but one that is light, easily operated, efficient and that can be sold at a lower price than was ever thought possible.

¶ They have stood the test in hundreds of homes for more than a year, and now that we can absolutely **guarantee** them, and manufacture them fast enough to meet the demand, we announce the

"Peerless" $15

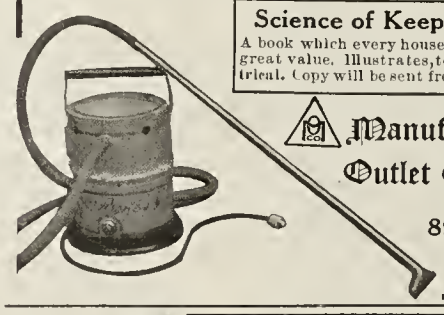
Dustless Home Suction Cleaner

¶ Greater simplicity, lightness, strength, are combined in this Home Cleaner. It weighs but 11 pounds, measures only 8 3-4 inches wide, is 22 inches long and less than 2 feet high—so light a child can carry it, so compact that it may be placed in any convenient closet or corner.

¶ It consists of two non-tarnishing, attractive looking white metal cylinders—one vertical and one horizontal.

¶ The suction is given by an easy running, easily operated plunger which draws in the dirt and dust through the nozzle and tubing, through two fabric bags inside the cylinder door. These bags hold the dust and at the same time filtrate the air passing through and out of the escape valve.

¶ It is simplicity itself to remove these bags after use, without the escape of an atom of dust. ¶ In using the **"Peerless"** the nozzle is merely run over the carpets, rugs, walls, curtains, furniture and mattresses; behind and in between registers, pictures; under chairs, tables, beds—into every nook and crevice—and not merely **surface** dirt, but dust right through to the back of rugs and draperies literally **vanishee.** ¶ No sweeping, beating or scrubbing—no flying dust anywhere and the **"Peerless"** makes the upheaval, discomfort, and hard work of fall cleaning **positively unnecessary.** ¶ It keeps your servants satisfied, your work and worry at a minimum, lasts a lifetime and above all **keeps your home epotless.**



¶ The **"Peerless"** is the result of **specialization**—only in that way have we been able to make a vacuum cleaner that will **clean as perfectly as many at three or four times the price.** ¶ The cost of the **"Peerless"** is so trifling, its **necessity** in the clean home is so obvious that housewives will feel they must have it, and husbands will insist on its use in minimizing labor and safeguarding the health of his family. ¶ If you cannot buy the **"Peerless"** at your local store, we will send one, fully equipped with solid oak base, 9 feet of superior unbreakable wire-reinforced suction hose, brass tubing and nozzle, with full instructions, on receipt of **fifteen dollars in express or money order.** Under

This Absolute Guarantee: That we will send it at once; That we will immediately replace with a new one if damaged in transit, make good any part or supply a new machine if any defects show within a year from date of purchase; and refund at once amount paid if unsatisfactory.

The cost of the **"Peerless"** is less than **5 cents a day for one year.**

Science of Keeping the Home Clean—FREE

A book which every householder and every housewife will consider of great value. Illustrates, too, our Suction Cleaners, both hand and electrical. Copy will be sent free if you will send us your name and address.

The air-space between the fabrics is the secret of

Improved

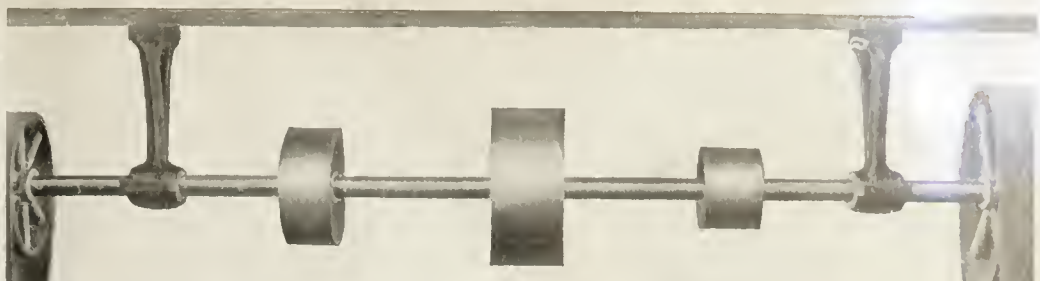
Duofold

Health Underwear

You know that two light blankets are warmer than one heavy one—and less burdensome too.

So the two light Duofold fabrics are warmer than one solid fabric; yet they weigh less. The cotton, linen or silk whichever you prefer inside is delightful on the skin. The wool outside absorbs all moisture from the inner fabric. And the air-space between is as warm as another fabric. Yet it weighs nothing.

Scientific common-sense. Why not get the benefit?



Duofold is thoroughly shrunken and *sizes are guaranteed.*
If your dealer hasn't Duofold garments write us for booklet giving weights, shades and styles, and the name of a dealer who sells them. Single garments and union suits for men, women and children.

$1.25 to $5 a garment

City Water in the Country

Here's something NEW—a gasoline engine which makes a power pumping plant out of any common pump in a few minutes. Beats a windmill all hollow. Will pump water from a well of any depth 500 to 800 gallons per hour, according to size of pump cylinder. Needs no special foundation. Any well platform is sufficient. Needs no belts, jacks or fixings of any kind. Is ready for instant use when you get it.

Runs out of doors or inside without overheating or freezing, winter or summer. No smoke, flame, sparks or odor.

The Fuller & Johnson FARM PUMP ENGINE

Is quiet—practically no vibration. By attaching a piece of pipe for extra air chamber, will throw a continuous stream of water 40 feet up in the air or 60 feet on the level. Fine for washing wagons and windows and for FIRE PROTECTION. Has pulley for running any machine which can be run by hand, and is so light it can be detached and taken anywhere in no time. It's built like an automobile, with the same care and same materials, and is so strong it should need no repairs for years.

Ask for our big catalog today and learn all about this wonderful invention.

Ideal 6% Bonds

Short-time or Long-time—Small or Large

Secured by Farm Liens

We have written a book—the best of its kind ever issued—dealing with every phase of irrigation and Irrigation Bonds.

It is written after fifteen years of experience in selling Reclamation Bonds.

During that time we have sold seventy separate issues, some of them running into millions of dollars, without a penny of loss to any investor.

We are now the largest dealers in these ideal securities. Our engineers and attorneys are experts in all that pertains to these projects. Our officers spend much of their time in the irrigated sections. Most of our issues refer to undertakings which we finance from the beginning.

This book is based on all this experience. It deals with the subject in a brief, clear, thorough way. Every investor owes to himself its perusal. Ask us to send you a copy.

Reasons for Safety

Irrigation bonds are secured by first liens, given by individual owners, on the most fertile farm lands in America.

The mortgage indebtedness rarely exceeds more than one-fourth the land's value.

The debt is incurred for water rights, and the water immediately multiplies the land's value. The first crop usually sells for more than the mortgage—sometimes by several times over.

The bonds are additionally secured by a first mortgage on all that the Irrigation Company owns. Some of the bonds refer to "Carey Act" projects. Some are municipal obligations, like school bonds. These form a tax lien on all the property—town or farm—lying in populous districts. Such forms of security are regarded as ideal.

Interest 6%

Irrigation bonds pay six per cent interest. There is no other large class of bonds based on equal security which now pays an equal rate. These bonds are issued in denominations of $100 and up, so they appeal to both small investors and large.

They are serial bonds, part of which are paid annually. Thus one may secure either long-time or short-time investments. Each bond paid off increases the security back of the rest.

Six per cent bonds having all these advantages are bonds that all should know.

The Popular Bonds

We handle Municipal, Public Utility and Corporation bonds, and as gladly supply one class as another. So the facts in our book are entirely unbiased.

But Irrigation bonds, for the reasons given, are now our most popular securities. They will be so with you when you know them.

That is why we issue this book—to extend information. To enable you to compare them with lesser securities. Please send us this coupon today for it.

Winning Pennants

(Concluded from page 14)

were pleading with the umpire to stop the game, claiming they were unable to see well enough to play. The batter hit a hard line fly to left field. Ryan turned, ran rapidly back for perhaps twenty feet, saw that he could not get back far enough to catch the ball, and suddenly he conceived a remarkable idea. Turning like a flash, he stood still, facing the diamond, and put up his hands as if catching the ball. He seemed to make the catch and, whirling, he pretended to throw the ball across the outfield to Lange, as they were in the habit of doing when either caught a fly. Lange, now knowing what was happening, carried out the idea, pretended to catch the ball and stick it into his pocket, and he and Ryan, followed by the entire team, turned and raced for the club-house exactly as they would have done had Ryan caught the ball in reality.

A Perfect Pantomime

THE pantomime was carried out to such perfect detail that no one in the grandstand or on the players' bench realized that the ball had passed ten feet over Ryan's head. The umpire, who had lost sight of the ball, was convinced Ryan had caught it, and allowed the out. Every scorer in the press box was deceived and credited Ryan with a put-out, giving the game to Chicago by 7 to 6, whereas the actual score was 8 to 7, with Philadelphia having a chance for more runs and Chicago another half-inning to play.

For sheer speed in planning and executing a play, possibly the greatest ever made was by James Callahan, afterward a great pitcher in both the National and American Leagues, when he was a member of the Kansas City Club. Callahan was pitching, and one of the fastest base-runners in the League was on second base. Every time Callahan pitched the ball the runner ran a third of the way up to third base, so that both Callahan and his catcher, Fred Lake, were kept busy watching the runner, to prevent him from stealing third base. Callahan assumed pitching position, looked carelessly over his shoulder, purposely permitted the runner to get a big lead, and then whirling like a flash he sprinted for second base. He was twice as far from the base as the runner was, but his movement was so unexpected that the runner, hesitating just an instant before making a desperate run and dive back to the base, was touched out as he slid. The play probably never was made either before or since in professional baseball.

This thinking and acting at high tension and the intense concentration is exhausting nervously and physically, and toward the end of a hard season the strain tells on even the strongest. The majority of the players recuperate by sleeping for long periods, while others seek absolute escape from baseball during the hours that they are not on the fields. Often players flee to distant parts of the city in which their team is playing, or shut themselves up in their rooms to avoid admirers and cranks who want to talk baseball to them. During the terrific strain of the last month of last season Manager Chance of the Chicago Club rescinded his rules against poker among the players, and organized games himself, during which all mention of baseball was forbidden. The "worriers" break down. The majority, however, recuperate in sleep and awake refreshed. After a hard series of games in Boston or New York, players frequently will crawl into a sleeping-car berth and sleep during the entire ride to some Western city, emerging finally refreshed and ready for the fray.

The Life of the Umpire

YET occasionally one hears: "Those fellows have a snap: big salaries, good hotels, the best trains, and they work only two hours a day." That reminds me of a story. "Silk" O'Loughlin, the umpire, had a bad day, and in the evening, feeling embittered, he was bewailing the sad lot of an umpire to Tim Hurst, his fellow in misery. "An umpire's life is worse than a murderer's," wailed "Silk." "He is an Ishmaelite, an outcast, a thing despised, loathed, and hated." He must hide from his fellow men; he dares not talk to any one; he has no friends; he can not speak to the players; must hide in obscure hotels; conceal his identity; endure abuse, insult, and even assault.

"Why," he continued, waxing eloquent, "the worst criminal in the world gets more consideration and kindness; the umpire, hated, abused, insulted, and often hunted, stands alone with twenty thousand people shouting every insult, taunt, and villification known at him. From three o'clock in the afternoon until five he must—"

"Yis," interrupted Hurst, "but kin ye beat thim hours?"

$5 in solid nickel case $7 and $9 in gold filled cases

The new "I-T" is a watch of the highest type, manufactured by the money-saving systems used in making the Ingersoll watches.

Though of totally different character and made in another factory the "I-T" is the same value in proportion to price as the Dollar Watch.

Ingersoll-Trenton

The best 7-Jewel Watch

It has bridge model movement, found only in the most expensive watches heretofore; 7 ruby, sapphire and garnet jewels; compensating balance, automatically adjusting itself to heat and cold; micrometer regulator and every scientific feature of accuracy known to watch making. Closest time-keeper; handsome; will wear 20 years.

$5 in solid nickel case $7 in 10-yr. gold-filled case $9 in 20-yr. gold-filled case

Sold by *responsible* jewelers everywhere or prepaid by us. Insist on seeing it before buying. Write for "I-T" Booklet No. 58.

Ball Bearing Throughout

Every vital operating feature is Ball Bearing in the New Model

L.C.Smith & Bros. Typewriter

(ALL THE WRITING ALWAYS IN SIGHT)

Ordinary friction bearings are cheaper to make, but not cheaper in the end. Ball bearings properly made, as we make them, cannot grind themselves loose like common friction bearings. They work smoothly, noiselessly, accurately, without "play" or lost motion, indefinitely. They can't wabble.

Our ball-bearing carriage solves the problem of free-running combined with absolute rigidity. Our ball-bearing typebar segment permits a capital shift, the easiest known, yet thoroughly positive.

Our Gardner ball-bearing typebar joint insures, with least resistance, the accurate imprint of the types, *in their proper places,* always.

The ball bearings of the L. C. Smith & Bros. Typewriter serve exactly the same purpose as the jewels in an expensive watch. A cheap watch, with pinion bearings, may keep good time at first, but the jeweled bearings keep on doing their work for a life-time.

Write for the Book. It's Free.

We Seek the Advertisers Who Want Light

We seek mail order advertisers who are anxious for a way to reduce their selling costs.

We seek general advertisers who want to find ways to get more results for their money.

We seek the wise men—the good business men—the men who want actual proofs.

We will tell these men how, with absolute certainty, to pick out the agent who can outsell the rest.

We appeal for good business methods in advertising—such as you apply outside.

Employ salesmen-in-print on just the same basis as you employ salesmen-in-person.

Accept no unproved boasts. Sign no contracts. Put it up to the men to make good.

That is the only way to place men on their mettle—to keep them at constant white heat.

Cling to them as long as no other men can outsell them. But always leave room to give the better man a show.

Advertising has not been largely done on that basis.

The advertising agent has demanded a contract, binding the advertiser for from one to three years.

The contract was blindly made—made before the agent had started to show results.

Then, if the agent fell down, the advertiser found himself tied to a failure. There was nothing to do but quit.

We have abandoned contracts.

No client of ours binds himself to remain with us. None states how much he will spend.

We abide by results.

If any agent can prove the power to outsell us, our client is free to go.

But we urge the demanding of actual proofs.

Any agent who can outsell another can prove it beyond any question.

He can prove it without asking you for any commitment. He can prove it, if you wish, while most of your advertising still goes through other channels.

We shall welcome the time when advertisers in general awake to this fact, and employ it.

There is a way to prove if your advertising can bring better results than now.

There is a way to know if any agent can outsell the one you employ.

The way is easy, and the result sometimes has proved to be worth a fortune.

If you are interested, simply write us: "Please explain the way."

A Problem Solved

Home Made Gas Light From Crushed Stone and Water

VOLUME for volume, this rural gas actually gives twelve times more light than the best city gas.

Like city gas, it is used in handsome brass or bronze chandeliers and fixtures of endless variety.

A simple twist of the wrist turns on a brilliant flood of light in any room in the house, day or night.

It has already driven the oil lamp with its grease, smoke, soot and smell, out of 176,000 town and suburban homes.

Takes some member of every one of these 176,000 homes, fifteen minutes once a month, to make all the gas the household can use.

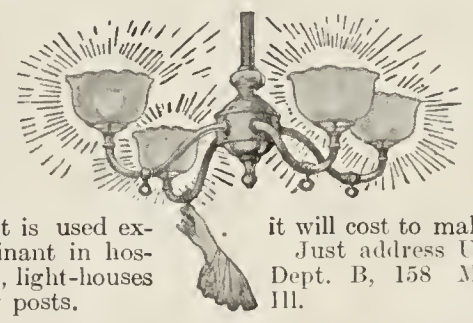
***

The magic is all in the wonderful gas-producing stone.

This stone is manufactured in huge electric furnaces, in a temperature of over 6,000 degrees Fahrenheit.

When ready to use, it looks and feels like crushed granite and is then known as Union Carbide.

Union Carbide is packed at the factory and distributed through warehouses all over the country in sheet steel cans in which it may be kept for years.



In these packages it is safer to handle and store than common coal, as it will not burn and can't explode.

***

The gas which this wonderful stone yields is genuine Acetylene.

And Acetylene, carried in iron pipes to ornamental fixtures, burns with a soft, brilliant, pure white light.

On account of its color, it is the easiest of all lights on the eyes, and is a boon to those afflicted with eye strain troubles.

It is not poisonous and one might sleep all night in a room with an open burner without harm.

For these reasons it is used extensively as an illuminant in hospitals, factories, mines, light-houses and government army posts.

To produce Acetylene, it is only necessary to mix Union Carbide with plain water in a small tank-like machine that is usually set in one corner of the basement.

The formula is simple, and the work can be handled by most any school boy.

Once a month he must fill the little machine with Union Carbide—the machine does the rest—it makes gas only when the lights are burning and stops making gas when they are turned off.

Anybody that can cut and fit pipes can install the generator, pipes and fixtures in two days without injuring walls or floors.

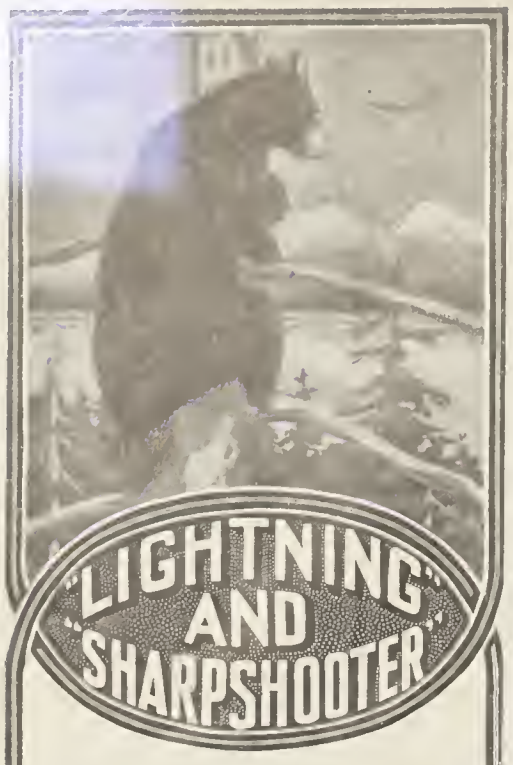
With such an installation you can make this glorious beautifying light in your own home for less money than same amount of light from kerosene would cost.

***

If you happen to live in the country, you can do as thousands of farmers have done—run the gas pipes to lights placed on your porches, in your horse and cow barn, or even in your barn yard and have all of them fixed up to light with a touch of an ignition button on post or walls.

Such a lighting scheme is not only a boon to the housewife and children, but it's a mighty handy convenience for the man of the house when he must do his chores after dark, or when he is called out in the night to attend a sick animal.

All these lights will be permanently fastened to ceilings, walls or posts, and enclosed in tight globes.



For this reason they are many times safer than lamps or lanterns that are so often tipped over with disastrous results.

Write us today how large your place and where it is located. Then we can mail our booklets and tell you how little it will cost to make this light yourself.

Just address Union Carbide Sales Co., Dept. B, 158 Michigan Ave., Chicago, Ill.

Brickbats and Bouquets

Kind Words and Bitter Spoken by Editors, Subscribers, and Readers, Regular and Occasional, About Collier's

"PITTSBURG, PA.
"Yours is the best exposition of the liquor question I have seen.
"JOHN M. GOEHRING."

✣

"CINCINNATI, OHIO.
"You first induce us to buy COLLIER'S by assisting us in our fight and then you sell out to the brewers and defend their publicity bureau in its attempt to prove that Lincoln was in favor of the saloon. You say you do not accept liquor ads. and then you accept pay for editorials in their favor. I have induced people to buy your paper because you were one of us, but you can bet your —— bribed heart I will do what I can to break you up. I am with God and against you and your kind in this fight.
"ELIOT G. MANIXON."

✣

"That the editor of a great journal of national circulation should write such nonsense about the subject that is foremost in the minds of the American people indicates a minnteness of mental caliber not characteristic of the swine family."
—*National Prohibitionist.*

✣

"NEW YORK, N. Y.
"And while I am about it, do let me tell you that I adore your editorials—all so piquant and yet mostly *kind*.
"ANITA FITCH."

✣

"SAN FRANCISCO, CAL.
"For a paper covering the greater part of the interests of human life, as yours does, it seems to me singularly neglectful of the spiritual.
"ARTHUR MACDONALD."

✣

"CINCINNATI, OHIO.
"We consider your editorials the best in the world. BUOB & SCHEU."

✣

"DENVER, COLO.
"It is to be regretted that a journal that maintains such enlightened views in general should be so fanatical and bigoted on this subject (vivisection). I presume, however, that had you lived a few centuries ago you would have defended the burning of witches. E. C. WILSON."

✣

"PITTSBURG, PA.
"I have just noticed an editorial in this week's issue of your paper, and I certainly desire to thank you for your very kind remarks, and I can assure you that the same are very highly appreciated.
"I might add that I was determined to land Colonel Mann, and I think I succeeded in doing so, after persevering for over two years and refusing to be frightened by the many threats made to ruin me. It is a case of where they attacked the wrong man.
"SAMUEL DEMPSTER."

✣

"'Fingy' Conners has brought a libel action for $100,000 against COLLIER'S WEEKLY. Now, really, Mr. Conners, do you think you can find any jury that will consider your reputation worth that amount?"—Binghamton *Republican*.

✣

"'He said he paid no attention to the things said about him in such papers as COLLIER'S—a Munsey paper; 'all of these Munsey papers are owned by that fellow Spreckels.' The reporter here got in a word edgewise, meekly suggesting that COLLIER'S wasn't a Munsey paper, and asking whether the Spreckels mentioned was the one who had been agitating things in San Francisco. 'That's the d——d fellow I mean; he owns all of these Northern yellow journals,' said the Senator whom Major Hemphill, a brother Democrat, calls Old Molasses. 'I am responsible to the people of this section: I am responsible for my actions to them alone. As for these infernal yellow journals, it is none of their d——d business what I do.'"—Hartford (Conn.) *Courant*.

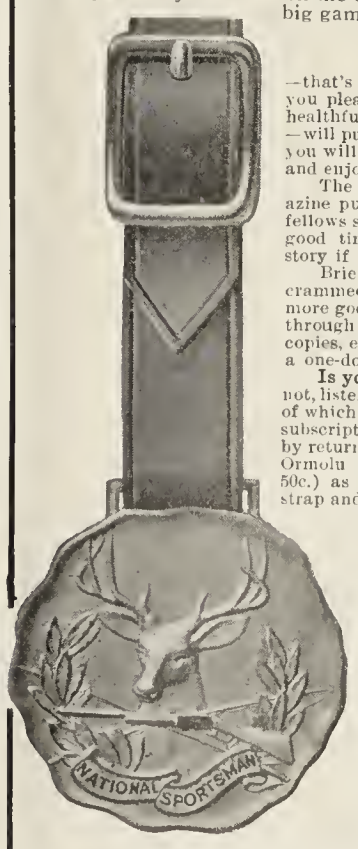
JAP-A-LAC Model Floor Graining Process solves the problem of "What shall I do with my old carpeted floor to make it sanitary and refined?" Your Painter can do it at a little expense or you can do it yourself. Insist on JAP-A-LAC

Hello, Brother!

Shed your pack, fill your pipe, and sit down—we want to have a little straight "Head Camp" fire talk with you. To get right down to "brass tacks," you've got your share of red corpuscles in your blood—you like the fields, and woods and waters—you like the solo of the reel, and the voice of the gun. It's an unfortunate fact that you, who love these things, cannot get more than from one to four weeks off in a year to enjoy them.



NOW LISTEN:—If we can show you how you can take a fishing or hunting trip twelve times a year for $1.00 without neglecting your work, will you take it? If we can take you into the big woods where you can smell the evergreens and hear the babble of the brook, and see at close range big game and small, will you come with us? Subscribe for the

National Sportsman

—that's the answer—and as this magazine comes to you each month, it will lure you pleasantly away from the monotonous grind of your every-day work to the healthful atmosphere of the woods and fields—will make you forget your troubles—will put new life into you—and in addition to your annual outing in the open, you will get from its contents each month during the year many a pleasant trip and enjoyable experience with Rod, Dog, Rifle and Gun.

The **NATIONAL SPORTSMAN** is entirely different from any other magazine published. It's just like a great big camp in the woods, with 75,000 good fellows sitting around the fire, smoking and telling each other stories about their good times in the woods. Come in, Brother, join with us and tell us a good story if you have one, or just sit and listen, if you'd rather.

Briefly, the **NATIONAL SPORTSMAN** contains each month 160 pages crammed full of stories, photographs of fish and game taken from life, and a lot more good stuff that will make any man with red blood in his veins read his copy through before he goes to bed, even if it takes all night. Think of it, twelve copies, each containing 160 pages, over 1,900 pages in all, sent to you postpaid for a one-dollar "William."

Is your blood warm yet, Brother? If not, listen to this: Send us $1.00, on receipt of which we will enter your name, on our subscription list for one year, and send you by return mail one of our heavy burnished Ormolu Gold Watch Fobs (regular price, 50c.) as here shown, with russet leather strap and gold plated buckle, together with a copy of our **ENCYCLOPEDIA OF SPORTING GOODS** containing **384 PAGES OF VALUABLE INFORMATION** for sportsmen, including a Synopsis of the Game Laws of all the States and Canada, Cooking Recipes for Campers, How to Use the Compass, Hints on the Use of Firearms, information about various kinds of powder, size of shot, etc., to be used, for different game, together with complete descriptions and lowest possible prices on all kinds of Guns, Rifles, Revolvers, Tents, Camp Outfits, Fishing Tackle and other goods of interest to lovers of outdoor sports. Can you beat this?

12 Copies National Sportsman at 15c each	$1.80
NATIONAL SPORTSMAN Watch Fob	50
Encyclopedia of Sporting Goods	10
Total Value,	$2.40

All Yours for $1.00

It's a whole lot for the money, but we know that if you once become a National Sportsman you will always be one.

Fill in attached coupon and mail to-day.

NATIONAL SPORTSMAN, Inc., 91 Federal St., Boston, Mass.

Send for 2-oz. sample bottle exactly this size.

If you have never used DIOXOGEN, or if you have been buying ordinary peroxide of hydrogen for personal use, we want to send you a 2-oz. bottle entirely without cost to you. The very best evidence of the advantage of DIOXOGEN is DIOXOGEN itself and we want you to try it at our expense. We will also send booklet fully describing its many uses.

Cut off and mail coupon or send postal mentioning this magazine today.

Sept. 11

THE
OAKLAND
CHEMICAL
CO.
98 Front Street
New York

Check one of the following:

☐ I have never used **Dioxogen** or any peroxide of hydrogen. I would like to try **Dioxogen.**

☐ I am using a peroxide, but not **Dioxogen,** for personal use. I would like to compare **Dioxogen** with the kind I am now using.

.....*Name*

.....*Address*

.....*Druggist's Name*

Dioxogen

THE PURE PEROXIDE OF HYDROGEN

is sold and recommended by many first-class druggists as the only suitable and efficient peroxide of hydrogen for personal, toilet and medicinal uses. These druggists **know the advantages of DIOXOGEN** and the **deficiencies of ordinary peroxide** for such purposes. There are many other druggists, equally honest and reliable, who have **not** investigated the comparative merits of the different grades, and, undoubtedly, honestly *think all peroxide is alike!* The following facts will prove of interest to these druggists and their customers:

Why DIOXOGEN, the *Pure* Peroxide of Hydrogen, Should Be *Sold, Recommended* and *Used* Exclusively for Personal, Toilet and Medicinal Purposes

1. *BECAUSE* the publicity given the many uses of **DIOXOGEN** has caused the market to be "flooded" with a hundred kinds, grades and makes of **ordinary** peroxide of hydrogen. Many of these are only suitable for bleaching and other commercial purposes and contain impurities and undesirable qualities which make them **totally** unfit for personal use. The name **DIOXOGEN** is your protection against these **inferior** grades.

2. *BECAUSE* **DIOXOGEN** does not contain acetanilid. **DIOXOGEN** keeps without it. Acetanilid is the preservative commonly used to keep ordinary peroxide of hydrogen from losing its strength. It causes the objectionable taste and odor characteristic of such preparations. The law requires a statement on the label if acetanilid is used.

3. *BECAUSE* **DIOXOGEN** is 25% stronger than the official standard; 33⅓% stronger than most and 50% stronger than many makes of ordinary peroxide. **DIOXOGEN** can be diluted with water to a much greater extent than ordinary peroxide of hydrogen and still be more effective. While ordinary peroxide may cost less than **DIOXOGEN** in the original package, it is more expensive in actual use.

4. *BECAUSE* **DIOXOGEN** does not spoil or become rank, and keeps just as well in open as in closed bottles, never varying in uniformity and efficiency. It is always the same because **always pure.** Lack of uniformity is characteristic of all makes of ordinary peroxide.

5. *BECAUSE*, when you buy "peroxide of hydrogen" without specifying **DIOXOGEN,** there is no guarantee of purity and quality. You may get "bleaching" peroxide, you may get "weak" peroxide, you may get "impure" peroxide, you may get "spoiled" peroxide. In **DIOXOGEN** you know just exactly what you **are** getting. The name is a positive assurance of quality; it is a **guarantee** of purity, strength and efficiency.

DIOXOGEN Has Many Every-Day Uses in Every Home

AS A MOUTH WASH, it bubbles about the gums and teeth, thoroughly cleansing them of all particles of decay and infectious substances; AS A GARGLE, DIOXOGEN removes the cause of irritation in the throat; DROPPED INTO CUTS, OPEN WOUNDS, OR SORES, it bubbles as long as infection remains and is a sure safeguard against further trouble. DIOXOGEN is the best kind of health insurance for every member of the family.

A booklet accompanies each bottle, giving over twenty other disease-preventing and personal toilet uses with full directions for each. Send for the free trial bottle and this booklet **today.**

THE OAKLAND CHEMICAL COMPANY
NEW YORK

Copyright 1909 by Hart Schaffner & Marx

MAKE up your mind now that you are going to wear Hart Schaffner & Marx clothes this fall: For the certainty of being dressed in correct style; for the assurance of all-wool fabrics, when cotton-mixtures are the rule; for shape-keeping, high-grade tailoring; for real economy.

If your clothier offers something else, there's probably more in it for him than for you. No clothier will offer you better clothes than ours; every dollar they cost is in the goods. In these days of advancing prices of wool and of fabrics, the temptations to cheapen quality are strong; you'll find many lower-priced clothes; but none really equal in value.

Our mark in clothes is a small thing to look for; but it's worth insisting on, because it's a big thing to find. Send six cents for the fall Style Book, 32 pages, 25 handsome style illustrations.

The Safest Way To Earn 6%

Investors—small or large—should inform themselves on Irrigation Bonds.

These bonds are secured by liens on the most fertile farm lands in America. The value of the security is in many instances four times the loan. The first year's crop often sells for more than the loan—sometimes by several times over.

Some of these bonds are municipal obligations, like School Bonds. They form a tax lien on the real property within the district.

They are serial bonds, so one may make short-time or long-time investments. Each year, as part of the bonds are paid, the security back of the rest is increased.

The bonds pay six per cent—a higher rate than one can obtain on any other large class of bonds equally well secured.

The bonds are for $100, $500 and $1,000, so one may invest either little or much.

These are ideal bonds, and they have become the most popular bonds that we handle.

We are the largest dealers in Reclamation Bonds. In the past 15 years we have sold 70 separate issues, without a dollar of loss to any investor.

Now we have written a book based on all this experience, and the book is free. Please send this coupon today for it, for you owe to yourself a knowledge of the facts.

ADVERTISING BULLETIN

NO. 21

CONCERNING THIS ISSUE

THIS issue of Collier's contains the finest body of Men's Wear Advertising I have ever seen in a periodical of general circulation. Its advertising columns are practically a style review of the coming season.

I can remember when the general advertising of any special brand of clothing, shoes, cravats, collars, hosiery, shirts, umbrellas, or shaving tools was almost unthought of. You bought shoes by size and neckties by color. There was no name on them.

You bought an umbrella with about an even chance that it wouldn't turn inside out at the first hard storm. The idea of guaranteed socks was as far off as that of a handy appliance for stropping your razor blades.

If you wore ready-made clothing you simply went to your local clothier and bought the suit you liked, provided it fitted your pocketbook as well as your person.

There was no manufacturer's label on it. No matter how well it pleased you, you could have no assurance of getting the same thing again.

There was no such thing as a fixed standard, of style, quality, or price.

Now there are dozens of manufacturers advertising these lines regularly, who guarantee and maintain a rigid standard of style and quality.

They are compelled to maintain it. Why? Because their goods bear their name, and the future—indeed the very life—of their business depends upon satisfied customers.

In buying these advertised goods in preference to those which are without recognized reputation to maintain, you simply serve your own best interests. You are absolutely sure of correct style, unvarying quality and longest service.

It is advertising that has brought about these conditions. It is advertising that is tending to standardize all goods. And while progressive manufacturers and dealers benefit largely by it, it is you, the consumer, who receive the most benefit.

E. L. Patterson.

Manager Advertising Department

IN NEXT WEEK'S BULLETIN—"A Common Mistake"

Fall Painting

Means Economy and Winter Comfort

Winter is Hard on the Home. The rain and snow, sleet and ice penetrate unprotected surfaces, and when Spring comes moisture and decay have done their deadly work. Winter's mud grinds your floors. Winter's soot blackens your walls. Winter's steam discolors the finish of woodwork and furniture. Winter plays havoc with all surfaces of the home *unless they are protected* with the right paint or finish.

A coat of good paint *now* will protect your building. The proper finish will make your floors easy to clean and prevent them from wearing white. A coat of No-Lustre Finish will give your walls a beautiful finish, which can be kept clean by the occasional use of a damp cloth. Furniture and woodwork can easily be made soot-proof and moisture-proof by any inexperienced housewife.

Go to your paint dealer, tell him just what surfaces need refinishing and ask for the proper

ACME QUALITY

PAINTS, ENAMELS, STAINS AND VARNISHES

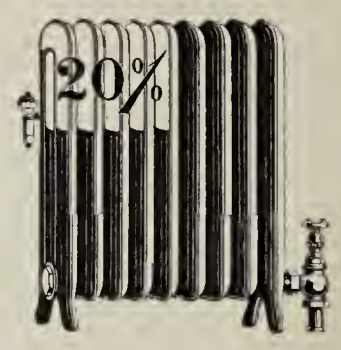
for the purpose. If you get the Acme Quality Kind you can feel satisfied that you are getting the very best. The Acme Quality Trade Mark on a package of paint, enamel, stain or varnish is like our signature to a check.

The following four Acme Quality Specialties are excellent examples:

Acme Quality No-Lustre Finish. A beautiful, lustreless, washable finish for walls and woodwork.

Acme Quality House Paint (New Era)—Result of a quarter century of scientific research and practical tests.

Acme Quality Varno-Lac—Best quality stain and varnish combined. For floors, furniture and woodwork.



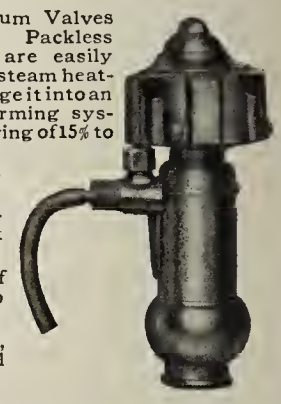
Acme Quality Floor Paint (Granite)—Hard, durable, quick-drying floor paint, saves labor and backache.

How to Get the Effect You Want. The Acme Quality Text Book on Paints and Finishes tells how to secure any desired finish on floors, walls, woodwork, furniture or on the outside of the house or barn. It not only enables you to tell your painter or decorator exactly what you want, but makes it easy for *you* to refinish the many surfaces about the home that do not require the skill of the expert.

Show your dealer this advertisement and he will give you one of these books, or write us and we will mail one FREE. Address Dept. P.

ACME WHITE LEAD & COLOR WORKS
Detroit, Mich., U. S. A.
IN DETROIT—Life is Worth Living.

Improve your steam heating



Air is the wasteful enemy of heat. It sneaks into radiators and piping through the ordinary air valves and radiator valves, and will keep any Low-Pressure Steam heating outfit from giving its fullest service. In ordinary weather, when the fire is low, air will steal into the radiator and make ineffective about 20% of its heating surface. This means heat shortage and fuel waste. You can get more steam, greater comfort, save fuel and care by adding to your outfit

NORWALL Vacuum Valves

These valves are much like the air valves now on your Radiators, except they are made to let the air out and *keep it out*. The steam is thereby held *all* through the Radiator; in fact, heat lasts 8, 12, or more hours after fire is banked. Gives early morning heat from previous night's fire, because the instant radiator is turned on steam fills the vacuum created.

NORWALL Vacuum Valves and NORWALL Packless Radiator Valves are easily added on to any steam heating outfit and change it into an ideal vacuum warming system, with a fuel saving of 15% to 25% (many report fuel saving as high as 40%).

No adjustment required—all done at the factory.

Made entirely of brass—nothing to wear out.

Send for free book, "New Aids to Ideal Heating."

DON'T MISS IT—Saves you $65

Special Limited Offer to Collier Readers

500 latest model American Typewriters. These will go quickly—Order promptly. You save $65 by securing for $35 a machine which will do all the work of the $100 machines at the highest speed and covered by the same guarantee. The regular price of the American is $50, the special price is $35. The American is equal to the $100 machines because it has every essential feature and has eliminated 1,200 cumbersome, troublesome and easily broken parts of other machines. Its simplicity of construction, the absence of the thousand and one little levers, bars, screws and springs which make the cost of $100 machines, accounts for this unequalled offer. The absence of all these complicated parts makes the American tip the scales at 12 lbs. It's the only high grade machine that is really portable. The fundamental point of American superiority is the single type bar—one piece of steel—non-bendable and unbreakable by any stroke that can be delivered on the key, and this is the cause of its simplicity, durability, efficiency and compactness.

$100 Machine

- Universal Keyboard
- Print from Ribbon
- Type Bar Machines
- Adaptability for Rapid Work
- Various Degrees of Complicated Mechanism
- High Quality of Work
- Carriage Action—on Some, Light; Others Cumbersome
- Portability—Next to Impossible When Convenience Is Considered
- Durability—Varied
- Two-Color Ribbon Shift Only on Some Machines
- Tabulating Indicator. Some Have It, Some Charge Extra

Usual Price $100

$50 American

- So Has the American
- So Does the American
- So Is the American
- Speed Unlimited on American
- 1,200 Less Parts on the American
- Perfectly Aligned, Clear-Cut Impression from American
- Extremely Light, Ball-bearing Carriage on American
- Fewer Parts, Less Weight
- One-piece Bar, Fewer Parts Less Complex, Longer Life
- Two-Color Ribbon Shift on Every American
- Tabulating Indicator on Every American

Special Price $35

Editorial Bulletin

Saturday, September 18, 1909

¶ Mark Sullivan, like President Taft, believes the South to be, just now, politically, the most interesting section of the United States. And so, Mr. Sullivan, having finished for the present his Comment upon Congress, will spend the two months until Congress again convenes, in traveling through the South.

The purpose of this announcement is to ask our friends in the South to write to us and tell us where Mr. Sullivan ought to go, whom he ought to talk to, and what he ought to observe. And such of our friends as care to make suggestions will bear in mind, we hope, that Collier's, as well as Mr. Sullivan, is interested in much more of the South than its politics. Industrially, during the next few years, the South is pretty certain to produce events more remarkable than any other section of the United States; and in its aspects which are less material than politics and industry, the South is forever full of charm and interest.

Of all the influences, direct and remote, which finally determine the subjects which this paper talks about—from among the million between China and Peru—the letters from our readers are the most interesting and the most vitalizing. Concerning these letters we once used these words:

> ". . . an editor's general impression of his correspondence, which stands to him for one of the most fertile channels of instruction, of first-hand and varied experience, that have ever enriched his passage through this vale."

We hope we shall receive from the South, during the next few weeks, many Letters to the Editor.

The Next Fiction Number

¶ The Fiction Number for October, dated September 25, will contain three strong stories, with a versatile range of theme and tone.

¶ David Gray writes a tale that imparts the superstition of the ocean. And when, as in this case, there is a youth whose navy uniform contains a timid soul, cooled even in fears which other sailors would scorn, "The White Birds of Sandakkan," presents a situation deeply dramatic. Midshipman French, a junior officer in the China squadron of the American navy, is walled out of wardroom comradeship because of his shrinking and delicate bearing. But he is appointed second-in-command of an expedition which is to trail in the wake of a suspected contraband ship.

The tramp steamer "Annie May," with the expedition disguised, comes upon the "Bedford Crescent" in the harbor of Hongkong. As the order is given to follow her out of the bay, a portentous mutiny appears in the crew. The boatswain declares to the captain that it is against the law of God and man to leave the port that night—that the vessel has been cursed by the great white birds which have swept about her, and have lit on her decks with the sign of death. As men sink down to die with the plague which envelops her, and the captain lies as a stone in his berth, Midshipman French wrenches himself into action; he commands the anchor to be raised, and with the whir of white wings ever within his ears he starts in pursuit of the British freighter. As he further proceeds, the story becomes more tense.

¶ When a "marrying man," who has survived three wives and ruggedly survived his grief, undertakes to prevent his son from wedding the daughter of a woman who has been overdivorced, he treads into complications like those encountered by Marcus Antonius Saterlee. In "Ma'am?" by Gouverneur Morris, Mr. Saterlee is racing across the country to thwart the match, when almost at the end of his journey he observes a "showy woman" across the aisle from him in the dining-car. Just at this moment the car, after a few brisk convolutions, settles into a ditch. In attempting to buy the horse and buggy of Grub City, Saterlee outbids the showy woman—then offers her a ride as far as she may wish to go. With a horse that creaks in action they embark upon a forty-mile road. A flooded river, an overturned buggy, and a few reminiscent details bring about an adjustment of the situation.

¶ In "Meddlers with Fate," by Allan Updegraff, it appears that a red tank station on the prairies, where freight trains doze on the sidings, is thoroughly versed in the habits of tramps, and impregnable to their fiction. But there was something—a glint of personality—about the ragged hobo who knocked at the tank-keeper's door, which made the woman of the house recall her denial of food. Yet she is taken with confusion at a request he makes for showing gratitude. As he moves away with the totter of the weary and sick, the thought of the tramp continues to probe the woman. Knowing that sixteen miles stretch out between him and the next tank-station, she realizes that he can not pull himself across the distance. She saddles her horse, and, leaving an important duty behind her, rides off over the plains to find him. The story describes the second meeting and its result.

THE *Packard* FOR MEN SHOE

$3.50-$4.00-$5.00

BROCKTON is the world's centre for the making of men's fine shoes. Three generations of the foremost American workmen have left the mark of their genius on its products and one of these products is the Packard Shoe.

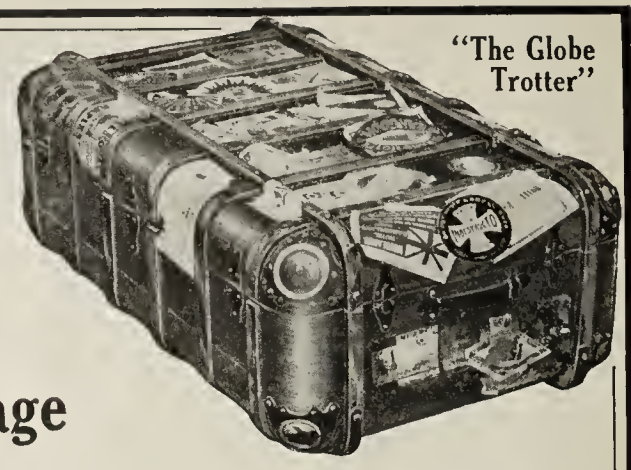
The Packard is built on the progressive idea—each expert doing his part—but quantity gives place to quality. There is no putting leather and accessories in at the hopper and taking away cases of shoes. Whatever makes for style, fit and wearing worth receives mental and manual attention. Machinery is a great essential, but it comes second to brains.

The result of our policy is a shoe which meets every rational need of fashion, fit and comfort, yet stands up under the multiple demands of town or country. You should wear the Packard. You owe it to your feet and your purse.

Ask your dealer, no matter where.

Send for free Catalogue.

Made only by



M. A. PACKARD COMPANY

BROCKTON MASSACHUSETTS

UNION MADE BY PACKARD OF BROCKTON

P

This Trunk went around the world without damage

"The Globe Trotter"

Here is a trunk so **strong** that the roughest handling in foreign ports makes no impression on it.

So well designed **outside** that it carries a look of distinction for the owner.

So perfectly equipped **inside** that it permits tidy, careful packing and carries **more** than ordinary trunks of larger size.

Yet exceedingly **light,** carrying capacity considered.

Indestructo Trunks

represent more comfort, longer service, greater convenience, less annoyance and less expense for the traveler than any other trunk made.

The manufacturers guarantee it

Also—every Indestructo carries a full five year guarantee against loss by fire, wreck, accident, collision, carelessness or neglect.

For further protection, each Indestructo is given a registry number so that it cannot possibly go astray in travel.

Go to the highest class merchant in your city and ask to see the Indestructo—the **guaranteed trunk.**

Compare it with ordinary trunks. You will at once see why the Indestructo is the one safe, convenient, satisfactory, economical trunk for travelers at home and abroad—for long distances or short.

One Man Returned Our Garters

A man in Philadelphia returned a pair of our garters recently. He hadn't worn them, but he said they wouldn't do.

Immediately, we sent back his 25c and his postage—together with the garters. And we said in our letter: "Please put these garters on. Wear them one day. Try them fairly, at our expense."

In answer, we received this letter: "Garters duly received and worn. They work fine. Am delighted. Will gladly recommend them."

And of the 25,000 men who are wearing **"THATsALL"** Garters daily, this was the only semblance of a complaint we ever received.

"THATsALL" Garters

Copyright 1909

Nothing *around* the leg

"THATsALL" Garters are new—only on the market a few months. Yet already they have spread over the whole country—to Cuba, to Mexico, to Germany, England, and elsewhere.

Hundreds of men's furnishers everywhere are selling them. And more than 25,000 men are wearing them regularly.

"THATsALL" Garters are remarkably popular, because they do away with the faults of ordinary garters.

For elastic and leather garters are tight. They bind the legs—stop the blood's circulation.

"THATsALL" Garters have nothing around the legs. So they can't possibly bind your legs, or stop the flow of the blood.

Yet they support your socks perfectly—keep them trim and neat. And they don't pull. You soon forget you're wearing them.

Ideal for Winter Wear

And they're wonderfully comfortable for winter too. For whether you wear knee or ankle-length drawers, **"THATsALL"** Garters support your socks perfectly. They're easily put on and taken off. And they can't tear the drawers.

But what is far more important they don't numb and tire your legs by stopping the blood, like tight leather or elastic garters do. And no matter how much you are on your feet during the day, **"THATsALL"** Garters are always easy and restful.

Try Them At Our Risk

Today, buy a pair of **"THATsALL"** Garters from your dealer. Or if he can't supply you, mail us 25c and his name, and we will send you a pair postpaid. Wear them 10 days. Then, if you're not satisfied, we'll refund your money. But we're so sure that you will be pleased that we'll even repay the postage if you don't like them. Send for a pair now.

Ballinger Should Go

IMAGINE NOT, O reader, that the controversy between PINCHOT and BALLINGER is a conflict of individuals. In it two great forces clash. BALLINGER talks about strict construction of the law. We shall speedily show that such remarks from his tongue should be accepted as an evil joke. He has pushed the law to its limit, if not beyond, against the public welfare. PINCHOT, in the administrative discretion left to him, has acted as attorney for the people of this country, living and to come.

As illuminating this Ballinger talk about respect for legal strictness, let us spend one moment on the Alaska land cases. *Immediately after his resignation as Commissioner of the General Land Office,* BALLINGER *became attorney for the Cunningham group. Are these men dummies for the* GUGGENHEIMS *and the Smelter Trust? The prize consists of copper mines and coal fields valued at several billion dollars.* What right had BALLINGER to take this job? Please glance casually at Section 190 of the Revised Statutes:

"It shall not be lawful for any person appointed after the first day of June, 1872, as an officer, clerk, or employee in any of the departments, to act as counsel, attorney, or agent for prosecuting any claim against the United States which was pending in either of said departments while he was such an officer, clerk, or employee, nor in any manner, nor by any means, to aid in the prosecution of any such claim, within two years next after he shall have ceased to be such officer, clerk, or employee."

As lawyers differ about the technical extent of this statute, we may confine ourselves to the spirit, of which Justice LAMAR of the United States Supreme Court, while he occupied the position now adorned by BALLINGER, made the statement that:

"Its design is to elevate the public service, so that it may inspire public confidence."

The facts are briefly these: A company in the State of Washington was accused of conspiracy to defraud the Government of valuable coal lands in Alaska. Public men and members of the Senate are interested in the company. The coal claims were included in a National Forest, but the Forest Service had never been notified of the hearings which were to be held by the Department of the Interior. When the Forest Service learned of the cases, it attempted to secure a postponement, and was told that the cases had already been considered, and millions of dollars' worth of land thus disposed of. Immediately, also, orders were issued that members of the Forest Service should not have free access to the confidential files of the Interior Department.

As Justice LAMAR pointed out, men in public office may acquire information and influence which would make them valuable as counsel against the Government after retirement. Other Secretaries have made a narrower interpretation of the law than Mr. Justice LAMAR. We leave the Cunningham land case, therefore, with the observation that it shows Mr. BALLINGER'S sense of legal safeguards and public etiquette not to be Quixotic.

Light on BALLINGER'S sympathies is also shed by the Truckee-Carson affair, which is in brief a proposed trade of perpetual water rights in California lands for the benefit of a private company. Only the interference of PINCHOT prevented the consummation of this deal. The Government is so entirely buncoed by the proposed agreement that it sounds ridiculous. In the Roosevelt Administration Secretary GARFIELD showed that a large part of the water-power sites already appropriated were under the control of two companies, and he withdrew many of the remaining sites from settlement. BALLINGER not only threw the land open to entry, but he suspended the ordinary procedure of the Interior Department, whereby preference rights are given to settlers and miners. Thus by extraordinary means he gave to power companies the opportunity to acquire vested rights before intervention by the President could be possible. He says no power rights were actually thus acquired. How does he know? ROOSEVELT'S idea was to withdraw them until they could be examined. We may observe in passing that among those persons who are securing the great water-power of the Western States are agents of the Standard Oil. We may also observe that a certain class of newspapers all over the country are fighting eagerly for BALLINGER. Among them may be mentioned, as examples, the Denver "News and Times," owned by ex-Senator THOMAS PATTERSON, and the Butte "Miner," owned by ex-Senator WILLIAM A. CLARK.

We have already referred to BALLINGER'S record in fighting WOODRUFF because of his virile land policy and appointing LAWLOR, a Southern Pacific asset, on recommendation of Senator FLINT. This Southern Pacific tool now gives advice to the United States Government on all matters pertaining to public land. For years the railroads have sought to pack public congresses in the West. GIFFORD PINCHOT has made powerful and unscrupulous enemies. Disinterested Western opinion has realized for years that the timber, the minerals, and the soil have long since become the loot of corporations whose political control of public servants is notorious. We know something of the Oregon land fraud cases. Other instances might be cited. Congress granted to the Northern Pacific Railroad in 1882 every alternate section for forty miles on each side of its right of way. All mineral land was excepted from this grant, yet the Northern Pacific Railroad, by political influence exerted at Washington, pilfered thousands of acres of valuable mineral land. The Union Pacific is said to own every coal-bed on the line of its road. Had GIFFORD PINCHOT been in office at the time, the Government might have found a way to prevent this wholesale spoliation. His services can not be discredited by an official whose political career has been covertly but closely associated with predatory monopolies. PINCHOT is using public office as a public trust. BALLINGER is straining every nerve to make public office subsidiary to private snap. PINCHOT works for average obscure and struggling human life. BALLINGER works for those who already have too much. "He who steals from a citizen," CATO once observed, "ends in chains; but he who steals from the nation ends in gold and fine raiment."

News

"At the moment I am deep in the 'Life of Santa Teresa.' Are you learned about her? A most remarkable person even for that queer age. And the papers are full of flying machines. There's a limitation of mine for which you may chide me freely. I can not care one whoop whether they fly or whether they don't. Yet it's the most wonderful thing of my time."—From a Letter to the Editor.

QUESTIONS CONCERNING the North Pole are mainly of sporting interest. Flying is changing and enlarging the life of men. The imagination of no one person is reached by everything. SANTA TERESA has stirred others before our keen and cultivated friend, but events reach the depths for thousands, where history and poetry do for one; and events so great were seen at Rèims that history for centuries must devote to that week a brilliant page. And what a year it is: flying a certainty; North Pole discovered; Turkey reformed; Persia reformed; England's ideas of the ethics of taxation upset; India restive; China subjected to a mass of new impressions; the distance across the Atlantic further shortened; the distance across our continent about to be shortened; wireless improved; the everlasting power of sentiment dramatically illustrated in the fall of CLEMENCEAU. If the cave-man lived to-day, he could hardly repeat his now famous declaration, "Romance is dead." By science, contrary to many fears, wonder and mystery have been increased.

A Playwright Gone

CLYDE FITCH will be mourned by intimates who loved him devotedly. His energy, his warmth and vivacity, and something of an almost feminine sensitiveness and appeal, lent to his friendships more of emotion than is common with our northern races. Of his personality the key-note was affectionate enthusiasm. He loved delicate and graceful objects, and his home was crowded with them. As a playwright, he will be missed by many thousands. Probably no American dramatist now alive has given so much pleasure to so large a number. Critically considered, his work reaches highest in certain technical details, and fails most in conception and in consistent effect. He was an observer of separate things, whether in psychology or in theatrical devices, and his dramas therefore have not the sustained unity and force which come from the power of one idea. He died at forty-four, he loved life, and with luck he would have had twenty years of improvement ahead of him; twenty years of happiness; twenty years of added pleasures for the multitudes who would have seen his plays.

Vivisection

MANY MICE, tens of thousands of them, in fact, are suffering from cancer, ruthlessly inflicted upon them by cool-hearted science. Why don't our dear friends, the anti-vivisection humanitarians, [illegible] after these wicked experimenters? It is about the season when another outbreak of fool philanthropy is to be expected.

Land of the Free

THE AMALGAMATED COPPER COMPANY of Montana not long ago discharged from its service certain witnesses who had testified for the plaintiff in a damage suit against one of its subsidiary companies. An undertaker sat on the jury which awarded damages to the plaintiff in the same case. This particular undertaker had theretofore taken care of a large number of the bodies of men killed in the Amalgamated mines. The Amalgamated Company, which politically controls most of the public officials, directed the coroner no longer to hold inquests at the establishment of the juror, whose only offense was that he had performed his sworn duty, many other jurors in three different trials of the same case agreeing with him. Rarely, where deaths occur by accidents in the mines, is the corporation found to be responsible by the jurors selected by a serviceable coroner. There is a law in Montana, declared constitutional by the Supreme Court of that State, which requires that the cages which carry the miners up and down the deep shafts shall have gates. These gates prevent the miners from falling off the crowded cages, or being struck by wall-plates in their ingress and egress to and from the mines. Recently a miner was killed because of the absence of these gates. The coroner's jury which investigated his death returned a verdict that the man came to his death "from causes unknown," and the corporation, though clearly violating the law, was exonerated. At the last election in Montana the Amalgamated officials sent word to the leaders of one of the parties that certain candidates for office were objectionable to them and must not be nominated —and they were not.

Anarchy

A MACHINE POLITICIAN, returning to his Eastern home after an elaborate "study" of direct primaries in the West, declares they lead to "political anarchy." If so, pass them along. A little political anarchy is what we need. Great men, these machine idolaters. When a Republican Legislature sent the Democrat CHAMBERLAIN from Oregon to the Senate, they almost died. Times change slowly, but they do change, even in Pennsylvania, where that famous statue of MATTHEW STANLEY QUAY at present reposes in the freight house at Harrisburg.

Horace Greeley

GIMBEL BROTHERS, large advertisers, are raising a new shop at the corner of Thirty-third Street and Sixth Avenue, in the city of New York. All over a high board wall surrounding the block they have plastered the term "Gimbel Square." Rumors are flying about the town that, in this somewhat daring attempt to put themselves ahead of HORACE GREELEY in American history, they have been able to secure the tacit cooperation of the New York newspapers, through the large amount of advertising which they are prepared to dispense. They are the largest newspaper advertisers in the United States. When they open up a store in any city the value of any big newspaper in that city is increased at least a million dollars, because Gimbel Brothers not only advertise themselves, but they force other merchants to keep pace with them. It is impossible for us to believe these rumors, nevertheless, and we suggest a simple method of putting them to sleep.

The New York "Tribune" has the greatest stake. It might well give its editorial opinion of whether HORACE GREELEY deserves to be deprived of his tribute of fame by the power of money spent in advertising.

The "Sun" is a brilliant newspaper interested in American history. What does it think?

A powerful contemporary of GREELEY was RAYMOND. What thinks the "Times?" Does it believe that by a former episode it is estopped?

And for a similar reason must the "Herald" make no mention of the move?

The "Press" has been waging a war on the theatrical syndicate and making its great point the control of editorial opinion. What says the "Press"?

The "World" is the people's friend and the ardent champion of independence. Has it any views?

Mr. HEARST is known all over this country for his love of news and for his blushing devotion as a popular tribune. It is said that his paper was the first to enter into this tacit agreement. Is the statement true? If not, how does he stand on the question of naming public squares? After famous Americans or after dry-goods advertisers?

To the afternoon papers the same question might legitimately be [illegible]. If our paper, morning or afternoon, prints one line of editorial protest, the change will hardly be approved by any Board of Aldermen. If it does come to pass, how about Washington Square? What newspaper or dry-goods house will seize that name? Madison Square? Bryant Park? Franklin Square? Hancock Square? Lincoln Square? Columbus Circle? Sherman Square? Shall they all go to the public advertising bill? Hanover, Van Cortlandt, Stuyvesant, Manhattan, Claremont—shall these names, freighted with history, be removed from squares and parks that the dollar power may be conceded further?

COPYRIGHT 1908 BY PACH BROS.

Edward Henry Harriman

February 25, 1848—September 9, 1909

Patchogue

SAD NEWS COMES FROM a town called Patchogue. To break the bitter tidings specifically, let us present a bit of a letter:

"I cast about for something else to read. . . . Need I say that I thought, first of all, of COLLIER'S? But at Patchogue the newsman said: 'COLLIER'S? Oh, no. That's the one paper you can't ever sell. Naw, you can't get COLLIER'S here.' But I did get it elsewhere. . . ."

What has Patchogue to say? Its name is one to which it should live up. He who passes through the place by the railroad finds it little dissimilar from other towns. Opposite the station may be seen the placarded allurements of the circus. Not far away is a sign proclaiming beers. The station itself has its one large waiting-room with the circular radiator in the middle. Outside, the "busses" wait patiently for commuters. All is normal. Can it be that this community is a whited sepulcher? It is pleasanter to think the "newsman" had drifted incredibly from the truth.

Harriman

ON SEPTEMBER 9 there died at his summer home, in the country, one of the most powerful men of the present generation, and probably the most powerful railroad captain who has ever lived. It was characteristic of his era that, the son of a poor clergyman, he left school at fourteen to carve his own career,—for such facts help to account for the strength and for the weakness of our great business kings. In the last years of his life Mr. HARRIMAN went through one change of attitude. He had been fighting the Government and the public all of his life, and was brought up in a school that favored doing what seemed promising in a business way and meeting public outcry with silence. Recently, however, Mr. HARRIMAN has frequently gone out of his path to explain and justify himself to the public. Had he been differently educated, his great powers might have been used uniformly for good, instead of being divided as they were. His best claim to public appreciation has been in his constructive railroad work. Although there was a great deal of the speculator in him, no man understood better than he what the equipment and service of a railroad ought to be. He never wrecked any property which he got hold of, and his ability in putting roads on a sound and paying basis was what made investors so anxious to put their money in property controlled by him, and this confidence was a large part of his power. In spite of his many inexcusable stock manipulations and his very much criticized doings in the Equitable, the Alton, the Union Pacific, and other companies, it has always been impossible to shake the belief of business men that control by HARRIMAN meant success.

Mr. HARRIMAN, like all other big railroad men, had the idea of a cross-continental line, which he was endeavoring to complete, but really more interesting among his unfinished plans were his extensions into Mexico, of which he characteristically was first to see the possibilities, and his intention to do for the Erie, which he saved last year, what he had formerly done for the Union Pacific. His greatest achievement remains his reconstruction of the Union Pacific, which he took when it was bankrupt. The soundness and brilliancy of his mind, on the side of constructive work, were illustrated as truly, and in a dramatic manner easily understood by the public, when he spent millions to cut off a ten-mile haul at Omaha, and millions more to cross Salt Lake. HARRIMAN would do anything to shorten the haul, for he thought in vast figures, thought creatively, and saw the future as vividly as the present. He would incur any cost to increase the train load, to get more traffic behind the engine, for that also was fundamental, and for such great ideas EDWARD HARRIMAN will be respected when his headstrong speculations have been forgotten. Perhaps the opposite of MARK ANTONY'S remark is nearer to the truth. The important good men do lives after them; the fleeting evil is interred with their bones. So let it be with HARRIMAN. We shall correct the errors of his era and long continue to admire the genius and courage of its biggest men.

What It All Means

The Cascades, the Formal Gardens, and the Court of Honor at the Alaska-Yukon-Pacific Exposition

The Great West, Its History, and the Yukon Exposition—Canada and the United States—Attitude Toward Japan—New and Old Views of Alaska

By EDMOND S. MEANY

THE Alaska-Yukon-Pacific Exposition is a combination of dynamite and the cactus dahlia, for it assuredly proclaims beauty's conquest of the "wild and woolly West." The grounds stretch between the shores of Lakes Union and Washington, with the tides of Puget Sound pulsing near. To the east rise the snow-crowned monarchs of the Cascade Range, and to the west may be seen the smaller but more jagged Olympic Mountains, like a great celestial saw cleaving the clouds. Everywhere on the distant shores and foothills are the primeval forests. Portions of these famed forests have been retained along the edges of the Exposition grounds. Here, then, are the dynamic forces of the West—mountains and forests, glaciers, lakes and tides—and in their midst nestles this Exposition, a dainty gem by day, a brilliant diadem by night.

It was by no means accidental, this combination of beauty, grandeur, and elemental force. The site was chosen after careful and prolonged deliberation. To the ground selected, which was covered with the original forest, were brought the ablest talents of the architects and the landscape artists. The Seattle men, constituting the Board of Trustees, aware that their own people would bear the cost, haggled not a moment, but engaged the highest talent for all tasks, declaring that while their Exposition would be relatively small, it must be perfect in beauty, with the keynote of "life, color, and motion."

Beauty's conquest of the West is epitomized in the Forestry Building. Thirteen hundred logs were brought from the forests to rear this structure. The columned temple speaks of the forest in every one of its beautiful and dignified lines, while at the base of the columns cluster vines, mosses, and flowers. Like the American bison, these forest giants are disappearing all too rapidly. It may be that the next generation of men will find it impossible to reproduce such a building. All around the shores of Puget Sound the forests are falling and cities are rising in their places. It is natural that such new and vigorous cities should be self-conscious. A score of years ago it was written of Seattle:

"For not in vain the furnace smokes and smolders
With throes of Titans under Etna hurled,
And Atlas here must square again his shoulders
To bear anew the burden of a world."

Yet with all the self-consciousness there has evolved in a single generation this ardent love of the beautiful, this profound appreciation of the sublime. With this esthetic change in the far West has come another of more palpable and direct economic value. A dozen years ago, President Cleveland, just before the close of his second administration, created by proclamation a large number of forest reserves locating most of them on the Pacific Slope. In the State of Washington, out of a total of 45,000,000 acres of area, the new forest reserves comprised more than 8,000,000 acres. There arose a clamor of protest from such forceful types of men as prospectors, miners, timber cruisers, and loggers. Like all other changes in the broad and free West, the revolution in the case was swift and complete. Thoughtful men studied forest problems, approved the reserves, and petitioned for more. Cities saw protection for their sources of water, farmers looked into the future and beheld the supplies of water for ages of fruitful irrigation safely protected in those Government-controlled forests. The clamor of the logger and miner was silenced in the cheering approval from all sides.

From Exposition to University

THESE citizens of the West who had been expending boundless energies in exploiting natural resources seized instantly the new theme of conservation of resources. Holders of large timber areas have begun to manage them on scientific lines, the storage of water and the use of water power are receiving attention, and the last four years have witnessed a wonderful activity toward the construction of good roads. The Exposition [illegible] Building. In it was held the first American Congress of Road Builders, participated in by experts from all parts of the world.

One of the finest examples of this wholesome idea of conservation of energies and resources is found in the plan of the Exposition itself. For the first time in the history of such enterprises the trustees began deliberately to so build that every possible portion of the expended labor and money could be saved for permanent use. The site selected is a part of the large campus of the State University of Washington. The regents of that institution wisely joined in the employment of both landscape and structural architects. The result is that all the asphaltum roads of the Exposition, the flowers, shrubs, fountains, statuary, and a majority of the buildings will remain at the end of the Exposition as a splendid addition to the permanent equipment of the State's chief institution of higher education.

But there is a much broader significance to this Alaska-Yukon-Pacific Exposition. While it will compel the nation to make a new appraisal of the character and worth of the far Northwest, it has an international significance, the proportions and potentiality of which will be realized a decade hence much more pointedly than at present.

The Upper Multnomah Falls

One of the many beautiful waterfalls along the Oregon shore of the picturesque Columbia River

Over the spacious doorway of the log-cabin home of the Arctic Brotherhood at the Exposition is a coat-of-arms, in which are mingled the flags of Great Britain and the United States, and around them is the legend: "No boundary line here." That same feeling of brotherhood has come down from the Arctic Circle to spread the spell of its genial and wholesome cheer over the friend and the stranger at the Exposition. The Canadian and the American are not only congenial to one another, but they are working in perfect harmony for the general advancement of Western America. They are creating a continental patriotism. There is nothing unnatural about this. The tide that throbs at the gate of Seattle, when it begins to ebb, must pass along the shore of British Columbia before reaching the Pacific. These next-door neighbors have for years visited and played with one another. Now the first opportunity to work together finds their brawny shoulders tugging valiantly at the same great wheels. Kipling may have had Vancouver Island in mind when he wrote "The Foreloper," the last lines of which are:

"For he must blaze a nation's ways with hatchet and with brand,
Till on his last won wilderness an empire's bulwarks stand."

Here is where the frontiers of two nations meet. The hatchet and the brand have blazed the ways through the wilderness of each, and hard on the heels of the pioneers have come the wheels and the whir of the twentieth century civilization. Neither nation has built a fortress to frown at the other. The best bulwarks anywhere and the only bulwarks here are the churches and schools, the newspapers and books, the railroads and steamboats, the baseball teams and the rowing shells. On the shore of Puget Sound at Seattle, the State of Washington has reared its chief institution of learning—the University of Washington. At the present moment plans are well advanced for the creation of the University of British Columbia. As these two institutions grow and thrive side by side it is inevitable that a thousand ways will open for the manifestation and cultivation of international fraternalism. This is the spirit which the Exposition has emphasized. It is so robust in its essence that it is surely destined to endure.

Pacific Festivals of Peace

REAR-ADMIRAL IJICHI, with the Japanese training squadron, was in the harbor of Seattle when President Taft touched the golden key to open the Alaska-Yukon-Pacific Exposition on June 1. At the same time there was present a fleet of American cruisers in command of Rear-Admiral Sebree. For two weeks these two admirals, with their officers and men, mingled freely in a series of joyful festivities. The dominant note throughout was the friendship between the two nations. Of course, it might be said that those speeches on both sides were only small contributions to a glad occasion. Still there was a ring of sincerity in the words that fell from the lips of those weather-beaten seamen. Besides that, an interpretation of this phase of the Exposition calls for more than a consideration of felicities by these representatives of the two navies. The Pacific Northwest has manifested a continuous friendliness toward Japan. The Nippon Yusen Kaisha has its American port at Seattle. Japanese enterprises are numerous and prosperous there. When the plans of the Exposition were expanded by the addition of the word "Pacific" to its title, the Japanese at once appointed committees to help raise the necessary funds, a Japanese banker was placed on the Board of Trustees, a site was chosen on the grounds, and a fine exhibit from Japan was assured. With consummate politeness and deference, these people from the Land of the Rising Sun respond to every call made along the lines of appreciation of art, intellectual improvement, or increase of international amity. More than ever

before the people of the Northeast are learning the truth of the lines:

"The Orient saw its Cæsar
When Nippon faced the sea;
Columbia found a neighbor,
The East had found its key."

It is worth while to reflect in this connection on the fact that in the very year, 1853, when Commodore Matthew Calbraith Perry appeared in the Bay of Yeddo with his brusk but successful diplomacy, the northern part of old Oregon was set off and organized as Washington Territory. The region was a wilderness occupied by hordes of savages clad in the skins of wild beasts and using stone axes and knives. During the same years that Japan has made her wonderful progress, the wild Northwestern Territory has evolved into the prosperous State of Washington — the host of the visiting millions at the Exposition.

Our Front Terraces

THERE can be no doubt that this synchronous development has helped each of these two communities to understand and appreciate each other. In Japan the development has been an awakening, a rapid evolution.

From the standpoint of the aborigine in Washington, the development has been more than a revolution —it has been for them a conquest of devastation. In both cases, however, it has been a leaping forward. Japan, as key of the East, is unlocking the cells of the Orient's hermit nations. The Pacific slopes are becoming the front terraces of America. In giving point to these transformations, the Exposition at Seattle is clarifying a recently cloudy atmosphere and is blazing the way to smoother paths for the mighty changes now at their dawn.

Seward's Best Work

ALASKA was the real inspiration of the Exposition. Alaska will reap its richest rewards. No matter how beclouded may have been the nation's view of that Territory in the past, from this hour there will be no excuse for the continued use of the terms of ridicule employed to satiety when Seward made the purchase. Seward was asked on his deathbed what he considered the greatest achievement of his life, and he instantly replied: "The purchase of Alaska, though it will take another generation to appreciate that fact." That other generation is now streaming through the beautiful grounds of the Alaska-Yukon-Pacific Exposition, and thousands of them are joining the chorus of praise for Seward's wisdom and courage in facing a storm of abuse to acquire for the nation this wonderland of the North. Polar bears are there, icebergs are there, it is true; but who can measure the countless millions of wealth also in that once despised region? During the last dozen years the most hardened skeptics have been convinced that Alaska was a treasure house of virgin gold. These same skeptics who visit the Alaska Building are now making many more concessions. It seems quite clear that the Territory possesses great wealth in copper, iron, coal, marble, tin, and petroleum.

The Exposition is proving these and many other things for Alaska. It is now known that the Territory possesses vast forests. Most of the trees are spruce. Water power is abundant. There is no good reason why this source of wealth should not be needed for the lumber markets, for even if the timber should prove inferior, as is sometimes claimed by lumbermen, the spruce and the adjacent water-powers mean an enormous supply of materials for the making of paper and pulp products. Any one at all familiar with that industry will appreciate what such supplies will mean to the United States within the next few years. Agriculture in Alaska has been the last to win its converts, and here again the Exposition is dispelling doubts. Tropical fruits do not grow in Alaska, but the Territory will yet come to our markets with a surplus of agricultural products. It is as demonstrable as algebra and geometry. The Alaska pioneers have proven the commercial value of their plow and harrow.

Orchards in the Wenatchee Valley

Fruit culture is fast becoming the most important agricultural development in the Northwest. At the Spokane Annual Apple Show a year ago the apples from this wonderful valley received the first prize

The Willamette River at Oregon City

Typical scene in a rapidly growing industrial town of the Northwest. In the timber districts the logging industry is opening the way for the farmer and manufacturer

A New Norway

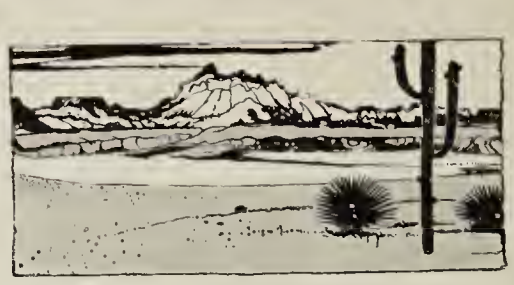
THE products are here. The real surprise is that this should astonish so many well-informed people. Northwestern Europe and Northwestern America are strikingly similar. The Gulf Stream modifies one as the Japan Current does the other.

St. Petersburg, Stockholm, and Christiania are all near the sixtieth degree of north latitude, and so is Valdez, while Sitka, Juneau, and Skagway all lie south of it. This Exposition at Seattle will be worth all it has cost if it convinces the world that Alaska is a fit place to sustain as good and as progressive a people as the Scandinavians, who have supported themselves happily in that similarly endowed region of Europe for centuries. In speaking of "The Destiny of the Northwest," Major Charles E. Woodruff, in a recent number of the Seattle "Post-Intelligencer," said: "The coast of Alaska, indeed, is almost identical with northern Scotland and that part of Scandinavia which we now think was the birthplace of the big, brawny, brainy, and blond race we call the Aryan—the type which by its very superiority, due to the long process of natural selection, has been able to conquer its way all over the world."

A Resuscitated Race

HERE is a suggestion that this Exposition of 1909 may be pointing its finger to the place where the finest of the Aryan stock may find its rejuvenation only to evolve a still more robust, vigorous, and brainy type.

The present is here with its definite charm and beauty, with its alertness and energy. The future beckons on those who are willing to dare and to achieve in fields relatively new but full of promise for the man or woman imbued with the spirit of the true pioneer.



Waterfalls of the Spokane River at Spokane, Washington

The city of Spokane, built up around these falls, has as yet utilized but a small part of this power. It is estimated that this torrent alone has sufficient force to run all the mills of Massachusetts. With the development of the resources of the Inland Empire, of which Spokane is the industrial and commercial capital, it seems inevitable that this city is to be one of the important manufacturing centers of the continent. Idaho and Montana have much unharnessed water-power [illegible] to this

The Golden West

BY BLISS CARMAN

IN the golden dawn of the world,
When man emerged
From the mysterious East,
With the breath of life in his mouth,
And the tell-tale trace
Of the red clay still on his face,

He turned with inquisitive gaze,
A child of the light,
To follow the track of the sun
Through the void far blue,
Seeing it sink to rest
In a glorious golden west.

Then an unassuageable urge
Awoke in his blood,
The brooding spirit of Earth
Whispered a word in his heart,
And man went forth on the trail,
Knowing he should not fail.

AND the slow centuries
Measured his toilsome march,
While ever his face was set
To lands that lie beyond
The going down of the sun,
Where endeavor's requital is won.

From Egypt and Greece and Tyre,
From Assyria and Rome,
With color and pomp and joy,
Laughter and chants and war,
Moved the great caravan
Of wandering man.

Conquering mountain and sea,
Spreading through forest and plain,
Crossing the outer flood,—
The rim of the ancient world,—
He passed over new domain
Like the hosts of sweeping rain.

Traversing prairie and wood,
Waterway, desert, and range,
At last by the ultimate shore
Of the ageless sea,
His pack-trains come to rest
In our golden west.

HERE have the most high Ones,
The Overlords of the world,
The Archangels of man,
Brought their earth children at last,
To the happy land prepared
For those who have labored and dared.

O men and women born
Of the teeming and holy earth,
And led through the myriad years
By the impulse and vision divine,
Behold now what shall be done
With the heritage we have won?

Here with an empire to use,
Wealth beyond Solomon's dream,
And the balm and respite of peace,
In a garden of the world,
What is the news or the plan
Of Twentieth Century man?

I HEARD the Sierras reply,
Rank after rank as they rose
Through the golden and violet light,
"The destined days are at hand,
When my children shall arise
And assume the heroic guise,

"From the beginning designed
For the seraphs, and sons of earth.
They shall put off envy and fear,
And skulking merciless greed,
And be girded against all ills
With the vigor and poise of the hills.

"Here on this border of time
Where mighty morrows are born,
Emerging from ages of dream
And the dust of unreason and strife,
They shall grow wise and humane
With a gladness virile and sane.

"Primal in beauty and pride,
Christian in kindness and calm,
Modern in knowledge and skill.
Sons of the morning arise—
Earth's awaited and best—
From the golden west!"

The World's Fruit-Basket

The Growth and Romance of Fruit Farming in the West

By RICHARD LLOYD JONES

OCCUPANCY is a better guarantee of sovereignty over empire than a thousand forts and treaties. Though Jefferson had purchased Napoleon's "Silent Empire," and Lewis and Clark had explored it more than a century ago; though Marcus Whitman had driven his gospel wagon into Oregon at the time Fremont set out to blaze the continental trail that resulted in the conquest of California in 1846, the real acquisition of our Pacific Coast came when the Luelling brothers, with patriotic heroism, carried their apple trees into Oregon in 1847, and the Argonauts trailed their picks and pans over the continent's rocky spine in the memorable year of '49.

The Luellings were sons of a Welsh Quaker planter and slaveholder in the Carolinas, who, through force of conviction, moved his family and negroes to Indiana, where he liberated his slaves and hired their labor for fixed wages. The sons became interested in fruit nurseries, and drifted across the three "I" States, leaving orchards behind them in Indiana, Illinois, and Iowa.

Strong pioneer courage caused these brothers to cast their lives where most men only ventured with their dreams. Into two boxes, on an ordinary wagon, were carefully packed seven hundred grafted scions of apples, pears, plums, grapes, peaches, cherries, and flowering plants. And this a patient, world-serving ox-team hundered from the alluvial rolls of Iowa over the bad, barren stretches, the hot, parched desert wastes, the boulder-barricaded passes of the defiant Rockies, the deep, shifting sand-dunes of the Columbia, down to the valley of the Willamette, close to the shores of the Pacific seas. The heroism of this pilgrimage will yet be told in school stories, and in some way Oregon will some time fittingly memorialize it. There were days when the water that should have cooled parched lips and swollen tongues was fed to the frail and shriveled roots. There were days when the oxen could wear the chafing yoke no longer. There was food to get, shelter to find, and often unfriendly Indians to evade. But the scions lived to spread their roots in Oregon's virgin soil. They grew and ripened fruits the like of which the Luellings had never seen before.

Something Better Than Gold

THE colony that Dr. Whitman had brought into Oregon, through Congressional aid, to save the territory from falling under British control, planted Luelling orchards. These fruits found their way into the Sierra camps where miners, homesick from the States, were hungry and careless as to price. When the first shipment of apples was made from Oregon to San Francisco, fruit sold for two dollars a pound. The shipments increased, nor could the supply meet the demand until about 1860, when California became self-sufficient in its supply of fruits, one of the Luellings having taken into the Golden State more than a thousand selected trees.

From that time on California discovered that she had something better than gold. She expanded into a hundred interests, from scenery to prunes, and exploited all with industry. Divorced from the Eastern States by an inhospitable expanse of desert, California became a self-supporting country, to which men emigrated with a sense of finality that they might assume in going to Australia. They cut timber, grew wheat on fields of huge proportions, established great cattle ranges, and exploited fruit growing for profit. Then came irrigation in a somewhat amateur form, and the people began to farm.

The Apple and the Dollar

This dollar which in this photograph is defaced to comply with the United States counterfeiting laws, serves to show the comparative size of the apples which are taken from a Wenatchee Valley tree, and represent about a dollar's worth at retail prices

The feeling of the early Californians that they were geographically segregated from "the States" was controverted by the eloquent logic of Starr King, who saved the State to the Union. To California at that time came Ezra L. Smith, a young collegian from Illinois, who had been prominent in the young Republican Party and a personal friend of Abraham Lincoln. He promptly became King's lieutenant in the California Senate. He created the enactments that established the University of California, and he became an enthusiast in California horticulture, and coordinated this infant industry under a State horticultural society.

Soon after the close of the war, at Secretary Seward's request, President Johnson appointed young Smith Secretary of the Territory of Washington, where he acted as Governor as well. To this unsettled northwest corner of our country he brought his horticultural enthusiasm. He fought for the conservation of the land grants that had been set aside for a future State university, and he encouraged the few farmers in the Territory to be disciples of the Luellings.

The Out-of-Door Alchemist's Shop

WHILE serving as Government surveyor of the Territorial boundary between Washington and Idaho, and Polk's compromise parallel of 49 between Washington and British Columbia, Mr. Smith made a careful study of fruit climates, altitudes, and soils. From these extensive observations he chose for himself a shelf of land at the confluence of the Hood and the Columbia Rivers. Here he became a resident of the State of Oregon, serving for many years as Speaker of the State House of Representatives, and, I am told, would more than once have been elected to the United States Senate had not his political independence and his great contempt for the cunning arts of the politician so alarmed, or annoyed, the party managers that they hesitated to elevate him to those honors which the people would have been glad to bestow.

In this Hood River Valley, which reaches back from the Columbia to the snow line of the rugged Mt. Hood, this pioneer of ideas and ideals devoted his interests principally to apple culture. The soil and air and glacial waters of the Hood River Valley and Ezra L. Smith became partners in the great out-of-door alchemist's shop.

Here, with his penknife, he would take a grain of pollen dust from the anther of a blossom to the pistil of a flower on another variety of tree. From the seed issue grew trees bearing a modified fruit. Patient labor and elimination gradually developed a more perfect apple. Orchards were planted, nurtured and sold, and new orchards planted again. Other valleys became interested in the Hood River fruit farms and emulated their ways.

This planter of orchards not only became known as the "Father of the Hood River Apple," but for many years he was president both of the Oregon State Board of Horticulture and the Northwest Fruit-Growers' Association; for so many years indeed that only recently, at an annual business meeting of these horticulturists, he refused to longer be a candidate. The vice-president seized the gavel, declaring: "All those in favor of E. L. Smith for presi-

dent will please walk out." Left protesting, he saw his unanimous election passing out through the door.

The advocates of a separate Pacific Republic, who were won over on grounds of rational sentiment by Starr King and his lieutenants, were bound to the Eastern States by strong ribbons of steel in the early days of Grant's Administration. And in 1883 the railroad to Portland went through and soon followed the Northern Pacific to Tacoma. This opened the market. Before this time Florida was our orange State, and oranges were a luxury. California soon delivered an abundance, and oranges became a common, though not an inexpensive, fruit. Before this time Michigan and Wisconsin were regarded as good apple States in the Central West, and Nova Scotia and New York apples were placed on the tables of the elite. The railroads soon put all these apples in the pie pan.

The University of the Apple

THE world got a good taste of Pacific fruit. The Departments of Agriculture and Interior at Washington sent special agents west to be escorted by Mr. Smith over these wonderful budding fruit lands. Hood River became the University of the Apple, and to its dean Germany, France, Russia, Argentina, China, and Japan sent special students to be tutored in the fine arts of apple-growing. Eastern produce merchants sent buyers West. The Niagara orchardists were puzzled that a bushel-box of apples, hauled more than three thousand miles, should bring a better price than a barrel of apples raised at home. The large, luxurious, costly crated cherries from the Dalles of the Columbia sold when the basket cherries of the East went to waste. The peaches and plums and grapes that came out of this wonderland induced many a Michigan and Delaware grower to correspond with land agents a continent's width away. And California gave us orange crops that were constant and abundant.

The Federal Government began to take a violent interest. It forgot the short-sighted speeches of Daniel Webster and other eminent statesmen who had denounced our great West as a hopeless and worthless waste. It did more: it forgot the academic issues of socialism, government ownership and control, and leaped into the ditch business on a magnificent scale. Where private capital hesitated, the Government boldly went. It locked up cañons, making great reservoirs where once there was but a creek. It robbed rivers of their flood waters, it diverted the entire flow of small streams, it lifted these waters across deep chasms with high-trestled aqueducts, it carried them around sheer precipices by riveting huge pipes to perpendicular rocks, and it spread them over deserts.

Uncle Sam went into the rain business. Where once only the tarantula and the rattler cared to live, he saw trees grow, flowers bloom, vegetables, fruits, and grains perfect, homes multiply, cities thrive, colleges spring into being, and civilization advance. From Yuma and the valley of the Rio Grande in the South, and from Chamberlain and Williston in the Dakotas through to the Sunset Sea, Government and private enterprise are building a paradise out of a wilderness. Millions of dollars are being invested and millions of people are settling. It is not a national movement, but a world enterprise, for its harvests go to almost every port. And almost every nation is studying these methods of horticulture and trying to duplicate these fruits.

The farmer is probably our most conservative citizen. He accepts reforms slowly, and seldom changes his habitat except through the sting of defeat. For this reason there is not as large a migration of Eastern farmers to the fruit fields of the West as the rewards for this labor would seem to invite. Horticulture is an exalted form of agriculture. It demands both intelligence and skill, and real success calls for an uncommon measure of commercial integrity. These conditions unquestionably account for the large element of literary and professional talent living the "bungalow life" in the fruit districts of California, Oregon, and Washington; and this same class of people are slowly fringing with their harrows the river banks of Idaho, Montana, Nevada, and Arizona, which are more remote from the metropolitan centers.

Orchards and University Clubs

IN THE cozy little Hood River Valley of Oregon, as an instance, where there are probably not more than four hundred orchards all told, there is a University Club of one hundred and ten members, one of whom conducts a most attractive and informative monthly magazine known as "Better Fruit," which is devoted to its subject. Worn-out professional people and those also who love the vast peace of the great out-of-doors, and who go West with a little money and much energy, find a haven. Frail men, who have promised their wives to die at forty-five, plant orchards on the slopes of Mounts Adams, Baker, Hood, or Shasta, and live until they grow ashamed to stare a cemetery in the face—and they eat shamefully. That which is true of Hood River is also true of the Yakima, Spokane, and Touchet Valleys of Washington; of the Rogue River, Umpqua, and Willamette Valleys of Oregon; of the Idaho, Montana, and Nevada orchard communities; and even more so of the great fruit valleys of California.

In all of these valleys there are hundreds of men who have made fortunes in the last ten years; in the next decade there will be thousands who gain affluence, and it may be less than a quarter of a century before we playfully talk this way of millions. For we are growing faster than at the rate of one hundred and fifty millions a century, and this on an ever-increasing ratio. This growth of population is a safeguard on fruit prices. Indeed it is likely that it will not be long before our exports on even these luxuries will be kept here to supply the demand at home.

When the Missouri River was still our frontier, Emerson wrote: "America is another word for opportunity." How much longer this may be true it is difficult to make an estimate. But for the wanton waste of our resources, and the treasonable indifference of our Congressmen, we could hope that this sentence might be true for centuries to come. Opportunity still lives for every State, but nowhere more obviously than for the fruit lands of the West. A prominent Eastern magazine editorially declares that, from the reports of "snap-fortunes" gained by settlers in the fruit lands, one would suppose that fortunes came easily, whereas the contrary is true, and then cites this case. A settler confesses that he landed at Wenatchee, Washington, in 1894 with his wife, two children, and but eighty dollars in cash. He rented a five-acre tract. (Please note out in Missouri and Maine—a five-acre tract.) He made a living off of it raising potatoes and tomatoes. He next rented twelve acres, and for five years cleared only a thousand dollars a year. In this time he was able to save only an even thousand, with which he made an initial payment on forty acres of fruit lands, and set out an orchard. In four years he got a small return from this. Two years later he picked ten thousand boxes of apples, which he sold for more than twenty thousand dollars. Since then he has done still better, and his orchard will gain each year for many years. A struggle story indeed—to begin with practically nothing and in thirteen years find himself, wife, and two children obliged to struggle along on twenty thousand dollars a year! Poor fellow! Pass the hat!

These fruits show the perfection of the many varieties that are grown in the Northwestern States

What a School Superintendent Did

THIS story is typical rather than exceptional. It is the sort of thing that is being done every year by hundreds, but, of course, it means work, and a conscientious application of intelligence and energy. Only a Wall Street plunger hopes to make twenty thousand a year without work, and he can't make it every year. No man can stay poor in these fruit lands. The people won't let him. If he works, he goes up. If he won't work, he gets out. They put him out. They operate a few jails as a concession to social interest, but no poorhouses. Of course the time will come when they will entertain the lazy man. It always does, but they are not that civilized yet.

Success here, as everywhere, depends upon the man, not upon his money. The man who rents land among the fruit fields is welcomed and assisted the first year, and perhaps the second. The third he is tolerated, the fourth sees his credit fall, and the fifth counts him as a failure. Good, unbroken fruit land can be purchased according to location from fifty dollars to a hundred an acre. This can be bought for half cash and half credit. If the man is poor he can clear it himself, and five acres ought, in the course of six years, to return him from two to three thousand dollars a year. If he can acquire ten acres, so much the better. From the first year he can do better than two hundred dollars an acre with strawberries and garden truck planted between his trees.

If one has money enough to buy his land, pay for its clearing and planting, a little constant and intelligently directed work will accomplish great results. The Superintendent of Schools at Dayton, Washington, planted his savings in orchards until he [illegible] hundred acres in perfect, mature trees. He [illegible] horticulturist, but his supervision of this [illegible] was his recreation. He now nets annually over fifty thousand dollars a year. A Tacoma society woman indulged herself in a sixteen-acre orchard at Ellensburg. She soon found herself harvesting over seven thousand five hundred boxes of apples a year, which sell for about seventeen thousand dollars. There are many in the Yakima and Hood River Valleys that do even better than this, but the average will not run as high. If an orchard is intelligently and skilfully handled, it ought to yield from seven to nine hundred dollars an acre, and if the earning falls below an average of four hundred to the acre there is probably something serious the matter.

Ten Acres of Contentment

THESE people have an abundant faith in their States, and learn to love their towns and counties. At the Seattle Exposition county buildings and booths were conspicuous everywhere. They exhibited their fruits, their grains, their schools, libraries, mountains, rivers, timbers, trouts, and homes. And everywhere one is confronted with such salutations as: "What Walla Walla wants is you," "Come out to Wenatchee and you'll do better," or "Come where the sun smiles upon you and the peach crop never fails," and "Here's where the homes are happy," "Yakima is not a 'has been,' nor a 'will be,' but an 'iser,'" or "You'll *like* Tacoma."

Around Wenatchee, Ellensburg, North Yakima, and Hood River you will find orchard lands selling for more than two thousand dollars an acre and paying an annual dividend of forty per cent on that valuation. A German and his wife, who had been perfecting a small orchard for a number of years, were offered a perfectly fabulous price for their little fruit farm. They considered the alluring offer, cried over it, and then replied that they didn't know what to do with so much money and that they did know what to do with the orchard. So they stayed.

A young novelist who had played with an orchard until it attracted a purchaser to whom price was of little concern, replied: "I've got ten acres of the finest apples, scenery, health, and happiness in America, and it's not for sale."

These stories can be collected by the thousands, and they are true. The semi-arid States that form the World's Great Fruit-Basket have but just begun to populate their reclaimable lands. Possibly in a generation, certainly within a century, these reclaimable lands will hold more closely knit communities than New England, for it means an average of a home to every ten acres, or sixty-four families to a square mile, as against four families to a square mile where farms average a hundred and sixty acres. And when this comes it will bring with it a more even distribution of wealth. These fruit communities now bear the appearance of an extended town, or a restricted suburban addition. Here the loneliness of the farmer's life is gone. Telephones and trolleys and automobiles, churches, clubs, and district graded schools are as much a part of the setting as the ditch or the tree. And in this unfolding of a wilderness the Government is playing an increasingly energetic part. New dams and ditches, reservoirs and locks are continually being built and planned. All this draws in upon the vanishing red man. During the summer just past an aboriginal American publicly admitted the end of his race. The Chief of the Flatheads, who have just lost their last reservation in Montana, proclaimed the last sun dance of his tribe. Where once his teepees stood orchards will soon be thriving. Next year the last ground of the Yakimas will be taken away, and the Klickitats have already gone. It is part of the world drama. The land famine is closing in.

The railroads that have brought San Francisco nearer to New York than Boston was to Philadelphia a century ago have been the cementing agents of our national life. The economic and political issues of Providence and Pittsburg are those also of Seattle and Spokane. We are a homogeneous people. The scenes along the Willamette in Oregon and the shadowy St. Joe in Idaho are strikingly like much of Wisconsin and Massachusetts, except that there are the great backgrounds of lofty pines and snow-capped mountains that the East does not possess. So with the people. They can not escape the impress of their environment. They are less cultivated than the East, but better educated. They have largeness of conception, boldness of action, lack of provincialism, and a venturesome spirit.

Kentucky's Slogan Applied

THE Pacific fruit growers are beginning to work collectively. Legislatures may make it a felony to ship a wormy apple across the State line—who in New York or London is going to prosecute? But the buyer of the worm doesn't go back to that kind of a box again. The reputation of a whole valley can be killed through the carelessness or trickery of one dishonest shipper. The Kentucky slogan, "United we stand, divided [illegible] becoming a commercial conviction in the [illegible]

(Continued [illegible])

The Skyline at Canon City, Colorado

The scenic grandeur of the Western States has never been appreciated properly by Americans. Lack of good roads has kept the tourist away from some of the most picturesque spots. This road shows what can be done. It is built over a high ridge, affording a wonderful view of the Arkansas Valley in Colorado

The great cattle and sheep ranches that occupied their places are now fast being subdivided into orchards and intensified farms

The Field Agent of Settlement

The Cowboy's Contribution to American Civilization

By FREDERICK R. BECHDOLT

AT THE summit of a hill he stopped his horse and rested, gazing toward the setting sun. Rider and animal stood silhouetted against the tinted sky in that huge isolation which the waning light of evening brings.

Upon them hung the trappings of the cattle ranges, loose harness made for heavy use, yet beautiful. The low-crowned sombrero with its leather band, the neckerchief of vivid red, the sagging belt weighed down by the long revolver, the bearskin chaps, the huge stock saddle, the spurs, the coil of rawhide rope—all were in stern harmony. The horse was lean of flank, straight-necked: the rider sat with a loose grace which made the animal a part of him.

The sun's last rays shook their long shadows through the gray-green sage across a bare white patch of alkali. Far behind a herd of cattle grazed, enshrouded by a cloud of purple dust. Ahead a range of mountains rose in mystery of peaks and tangled cañons.

Eastward the country fell away to rolling hills; the hills to sealike plains. This was the wandering-place of herds, the region of the pastoral. Behind it, where the prairies lay, wide wheat fields yellowed in the summer sun and farmers bent their weary backs to plowing. And farther still, behind the country of the agriculturist, the whole earth trembled with the tread of toiling thousands and cities smeared the sky with smoke.

On the hilltop at the edge of all the cowboy rested, looking toward the west where solitary prospectors had gone before. The jingle of his spur broke in upon the silence. The lean horse started forward. The rider's body swayed in rhythm to the easy gait. They vanished in the deepening dusk.

In this same manner, were he standing in the path of an advancing army, one might see a cavalryman ride forward to an eminence and pause, outlined against the sky, before pressing onward. Somewhere to the right another rides, and to the left another. In a long, loose line, every soldier within hail of one on either side, they cross the country. They make possible the slow advance of the more cumbrous troops who come behind. Such a movement is marked always by a series of sharp skirmishes and wild adventures. Even nowadays its incidents make war seem picturesque.

The advance of the cowboys from the prairies bordering the Mississippi Valley to the last bunch-grass foot-hills within sight of the Pacific was made in such a skirmish line. The cavalry of industry's large army, they began a forced march westward at the ending of the Civil War.

The arrangement of the forces in this civilizing movement of which they were a part was exactly similar to that of soldiers in the country of an enemy. First came the scouts. From the days of Bonneville and Lewis and Clark these hardy men traversed the wilderness beyond the Mississippi. Trader and prospector and Mormon emigrant, they mapped out trails and built their lonely outposts, leaving enemies behind and roads as yet unmade. Finally the time came for the progress of the two main bodies—the farmers who would overwhelm the wide land and subjugate it with their plows; the hosts of toilers who would use its products to build cities. To prepare the way for these the cowboys, in a line that stretched from Canada to Mexico, swept on ahead. And where they rode the wilderness became a cattle range. They made the country pastoral.

That was the first great change. The men who had gone before had made temporary camps or at the best had founded isolated communities. The range was a wide conquest, a universal occupation never afterward to be abandoned. Its gradual encroachment on the West was the beginning of permanent industry; it was the preparation for the teeming life, the complex civilization of to-day.

The story of that conquest is the story of the West as it has been, the wild, free West of yesterday. The work is done; the cowboy is a vanished type. We boast of him in stories and we draw his picture to remind ourselves of a splendid past. In the halo of the picturesque his economic value has been lost sight of. Like many other men who have found life's keenest pleasures close to death, he was a constructive soldier. Probably he was the finest that the world has known.

He was a product of conditions in the East. He was lured westward by the hazards which the country offered him. It seems to be the case always that when industry needs a large body of men for some such special duty as this, civilization has just brought about conditions which supply the recruits. The hard times in the North, the ravaged farm lands in the South, the tameness of the Mississippi Valley whose elder generation of pioneers had transmitted fighting spirit to their sons—these things had brought restlessness. Also there was common then a certain well-known spirit, hard to describe, which makes boys rowdies when they stay at home and men of action when they go away. The West called and the East stood ready with a few thousand lean, hard-boned young men, endowed, above all other things, with that fine quality of moral courage known as "sand." They straggled to the cattle ranges, some with shoulders damp from the tears of fond good-byes, others hard-eyed with memories of what had driven them from home.

And then they got their tryings out. Sometimes it was a vicious horse, sometimes a pistoled bully taking fine delight in the baiting of a tenderfoot, again a circle of unshaven ruffians round a campfire, keen-tongued, searching the homesick soul's last depths with caustic, drawling wit. Always the West took the East, examined him with care to find his weakest, sorest spot, then tested his endurance to the uttermost by probing this. And when the East gathered his bruised frame from the sagebrush to remount the bucking animal, or clenched his whitened jaw before the ugly revolver muzzle, or wanly smiled back at the jeering faces—when he did this for the tenth time perhaps—he found himself no longer East, but West, accepted suddenly and among his fellows. By such rude, thorough processes they made cowboys from the best and strongest of the men whose restless spirit had led them to the range. Those who were too weak or vicious or small were winnowed out, rejected to drift away to gambling hells, to cattle-stealing, or to highway robbery. A few went back home.

When the sheriffs failed the cowboys held up the arm of the law

These cowboys soon became a race apart, distinct in dress and speech from all of those classes whence they had sprung. Their garb—from high-heeled boots to wide-rimmed sombreros, adapted to their work's peculiar needs—has become symbolic of the country where they rode. Ages yet to come will know it as the draping on a coat of arms proclaiming the New West. Their speech is nearly obsolete. The soft drawl of the South lurked in many of its vowels and slurred many of its consonants. It borrowed idioms from the Indian and the Mexican. Some of its words—as "latigo," "pinto," "pasear," and "bronco"—will linger as long as men use lariats and two-cinched saddles. Others are now seldom uttered except occasionally upon the stage. Clad in the regalia of the range, with their long, single-action Colt revolvers swinging by their thighs, they spoke this dialect from North to farthest South. As a rule they were young men; after thirty one begins to lose that toughness of bone essential to riding such as theirs.

Their life was hard. It developed high qualities of courage, quick minds, and iron bodies. It needed these. Their swift, civilizing movement across half a continent was a march replete with stern endurance testing periods, full of fierce emergencies.

The country over which they passed was a semi-arid region, plains rising to plateaus, then rolling foot-hills climbing toward mountain ranges. In its general features it was all alike. Sage-brush and greasewood dotted it. Its fertile soil was baked in summer, bleached with alkali. Distant streams flowed over it, their shores treacherous with quicksand, their currents shifting constantly and full of swift eddies. Steep-banked gullies crevassed its slopes, pitfalls hidden by a growth of brush. Prairie dogs and gophers pocked the level places with their holes. A country difficult for careful riders—the cowboys spurred their sweating mounts across it at the dead of night; they swam their horses through its unknown rivers; they traveled all day long beneath its summer sun; fifty miles was a small day's journey for them.

In this land they built the ranches like scattered outposts in the region of an enemy. When hostile Indians broke out from the reservations settlers fled to these ranches. From them men were always riding forth to hunt down stock thieves or to explore new places. All of them were much alike—a group of low log buildings where a stream wound lazily between two lines of rustling cottonwoods and dusty willows; a circular corral; a fenced pasture which included half a township, and, perhaps, beside an irrigating ditch, a patch of green alfalfa meadow. Enclosing this the unfenced range, wide sage-brush hills, and plains over which the cattle wandered seeking bunch-grass.

Twice each year—in spring and fall—they went out into the land and gathered the cattle for the roundup. Some of them rode far, in a wide enclosing fringe, beating down every cover, searching every ravine and gully for the grazing stock. As they searched they gradually closed in their circle, drawing nearer to the branding pen, the common center. They held the driven herds until these became one compact body at this place. It was wild riding—race against a fleeing steer, down hillside, into gully, up crumbling bank, then [illegible] open where the speeding horse [illegible] agile found way among the [illegible] holes; rush along the front of a [illegible] with flaming pistol and [illegible]

The Boosters

The Way the Communities of the Pacific States Are "Getting Together"

By LUTE PEASE

"Hurrah!" shouts the speaker. "Why don't you people raise the roof?"

SCRATCH a Westerner and you will find a booster. Tramp, millionaire, preacher, and cowboy are ever ready to tax the language in challenging the world to show our equal in climate, soil, and opportunities. Every State is "the land of opportunity," every county "the richest in potential possibilities," every town "the queen city." Development is the passion—almost the fetish. Better business, better buildings, better streets, better schools, better farms, better transportation, better government—back of it all is the booster. But the greatest marvel he has wrought is his organization—the booster clubs, development leagues, promotion committees, and commercial chambers, all the work of practically the last half-dozen years.

"We have got to get in line and organize," says the banker of Apple Valley to the leading merchant. "This section is just as good as Hood River, but people don't know it."

"Yes," says the merchant, "we have got the resources—we need the people."

They talk it over with the biggest wheat man, the biggest orchardist, and other leading citizens of the community, and agree that it would be a good plan to ask the booster club of the State's metropolis to send over its expert to "tell us how to do it."

The big club asks nothing better than such an opportunity, and sets a date. Dodgers are printed and mailed to the leading farmers and scattered broadcast, inviting everybody to attend the meeting.

The night arrives: the committee from the big club, headed by the publicity expert, is met at the train or boat by the citizens' committee with the town brass band, and escorted to the town hall. On the platform are the local dignitaries and their invited guests. Mr. Chief Booster is introduced.

"The first thing to do," says he with great emphasis, "is to appoint a committee of two who shall take charge of the doorways and shall see that no one leaves this hall during the meeting unless he has contributed to the fund we have got to raise."

Of course there is much laughter, but the committee is appointed and takes its stand with due solemnity. The speaker, a star evangelist of the gospel of community advertising, who has all the fire and magnetism of the revivalist, proceeds to conduct the meeting with something of the methods of the old-fashioned church-debt-raising affair. He begins by telling what the adjacent towns have done, rousing the local pride; shows the increased valuation of every acre of land by the attracting of new enterprises and the bringing of new settlers.

"The money spent in this way is not expended," he shouts; "it is an investment—crumbs cast upon the waters to be returned in a little while as good fat loaves. Now I understand that your bank here has so many hundreds of thousands of deposits, and I feel sure that this bank will be glad to head the list with fifty dollars a month for the year toward this fund."

The banker, who had decided to subscribe twenty-five dollars as his limit, squirms a moment, but in the pregnant silence he arises and says spiritedly:

"All right, put me down for fifty dollars—"

"Hurrah!" shouts the speaker, clapping his hands with great vigor. "Put Mr. Smith down for fifty dollars. Applaud! Why don't you people raise the roof?"

The banker, still standing, after the noise subsides, suggests, with a gleam in his eye, that the new bank recently founded also give fifty dollars a month, and that the leading merchant do the same.

"Of course they will!" shouts the booster.

The applause is tremendous—the meeting is warming up.

The two gentlemen squirm a little, but come through with the contribution requested.

"Now let's start the twenty-five-dollar contributions; we should have at least ten of that amount," says the speaker.

Three or four come in amid applause. There is a pause.

"Mr. Wilkins," says Mr. Booster to the last contributor, "you are an old resident of this community; can't you point out a few more men who should come in for this sum?"

"Well, there is Mr. Adams over there. He owns 1,200 acres adjoining town."

Mr. Adams squirms.

"I—I don't see how I can raise so much as that."

"Why, you sold off that big bunch of stock last week," persists his neighbor.

"Well—" Mr. Adams squirms a little more, "I'll give fifty dollars for the whole year," he says at last.

"Don't take that subscription," says Mr. Booster, with great impressiveness to the recording secretary. "A man who owns 1,200 acres like that, the value of which will be increased at least twenty-five dollars an acre, to give only fifty dollars, the increased valuation on only two acres! It's ridiculous! It is such men as this that have held back your community, and the sooner they realize that the public has no use for such mossback spirit the better."

This is pretty rough, but very effective.

The booster, to bridge over the pause, exhorts further. He tells the amount per capita that was raised by the neighboring town.

"I feel sure that this town is just as ready, just as public-spirited, and just as anxious to get on the map as those people over there."

"I'm going to give twenty-five dollars, mother," says an old farmer to his wife.

"We can do it some way, I guess," she replies, excitedly.

"Mr. Pilsen gives twenty-five dollars!" shouts the organizer. "Hurrah for the best booster in Apple Valley! Clap, you people, clap! Who will make it twenty-five more?" and so on until in half or three-quarters of an hour a little town of 1,200 or 1,500 people will have pledged from $4,000 to $5,000. A permanent organization is then quickly effected; the president and secretary of the new Chamber of Commerce are appointed, and a committee is named to find and employ a promoter of their own.

The California boosters return Oregon's call

Mr. Booster gives them a little more talk full of good advice, advertising suggestions, and general inspiration, and thus another unit is added to the chain of booster organizations which have combined to make a unit of the whole Pacific Coast for commercial and industrial development in every direction.

Two hundred different town booster clubs, headed by the California Promotion Committee, and having a membership of 30,000 leading citizens, work as a unit for California.

Ninety-three organizations in Oregon, representing every community of importance in the State, and headed by the Portland Commercial Club, form the Oregon Development League, perhaps the best organized and most united body of its kind in the country, though five years ago there was not a publicity bureau in the State outside of Portland.

In Washington, Spokane, "the metropolis of the Inland Empire," undoubtedly conducts the most vigorous campaign, full of original ideas and brilliantly executed details. The Seattle Chamber of Commerce, that fountain of the famous "Seattle Spirit," has taken initiative in some of the most important "get-together" movements of the Pacific Coast. Tacoma has a most vigorous organization; and Walla Walla, Yakima, and every important country town in the State is spending money and effort with great enthusiasm and prodigality. It is estimated that fully $1,000,000 has been raised for booster work on the Pacific Coast for 1909, not including the contribution to the Alaska-Yukon-Pacific Exposition. Spokane is spending $70,000 for advertising alone, and Portland nearly as much.

All the big booster organizations, which include promotion committees, boards of trade, chambers of commerce, and commercial clubs, have active part in the Associated Chamber of Commerce of the Pacific Coast. This latter body, organized at San Francisco last October, largely at the instance of the Seattle chamber, "is the first positive and definite effort to unite the commercial interests of the entire Coast on subjects of common concern. The organization promises to become a powerful factor in advancing the welfare of the Pacific States, especially before Congress, and in relations with the Orient."

Here I would correct any impression that the booster is, of necessity, a real-estate man. Few real-estate men have any prominent part in the organizations. Town-lot or town-site booming has no place in the booster's movement. It is as substantial as it is new. It is the "community-of-interest idea." Bankers, wholesale merchants, governors, mayors, leading professional men, manufacturers are the leaders in the movement. The lessons of the old boom time were well learned. The modern booster has nothing to sell, nothing to promote, except the legitimate all-round development of the West—his town, his county, and his State. This accounts for the extraordinary unity and enthusiasm so manifest. It amounts to a passion, it is almost a religion.

"What helps the town helps you." "Build up the country first, the city will take care of itself." "Work for the West and you work for your State." Such phrases sound the keynote of this whole extraordinary movement. A few years ago jealousy was the rule; small towns hated the big ones; the big ones worked only for themselves, or wasted good licks upon one another's shins. The West was like a back-yard fence with a row of cats snarling and spitting at one another. All that is passing. The regulation commercial-club-after-banquet speech to-day begins: "The Pacific is the theater of the future's development; this Coast will no longer be the back-yard of the nation—it is destined to be the front door. Let us work shoulder to shoulder to that end," etc. It is no longer good form to knock the other town.

Some of the suggestive slogans are wonder workers. "Build and Boost, it builds your business!" "Tear down the shacks!" "Cut out cream-puff construction and build for the future, but *Build Now!*" Under such influences the rows of rusty old frame structures that once made the town look slovenly and backward are rapidly giving place to up-to-date reenforced concrete. San Francisco is almost awestruck at the miracle of its own rebuilding in three years. The booster spirit did it. The first shock of the big fire over, insurance millions pouring in, things looked brighter; pessimism was frowned upon, booster talk began: "Quitters? Not much! This town's all right; it wasn't the earthquake, anyway. Fire did it; any town may have a fire. We'll clean up and build up again. *Build now*—fire-proof—earthquake-proof,

too— Hurrah! everybody for the grand débris-cleaning day!" And the trick was done.

Everybody must take a hand at the boosting game. Wo to the leading citizen who won't *ante* according to his means and prospective benefit. Every newspaper, weekly or monthly periodical, must give space liberally on every possible occasion. One mustn't be lukewarm. "Watch Tacoma grow," "See Europe if you will, but see America first," "500,000 for Portland," "What Walla Walla wants is you," and "Buy your ticket to Boise," are the kind of phrasecological cocktails you are asked to pass along and to rubber stamp on your stationery. When you travel constitute yourself everlastingly a publicity agent. Whoop it up. It's brain-absorbing, dead-in-earnest, dollars-and-cents business, to which high-salaried experts are devoting long hours daily with staffs of stenographers and special writers in luxurious offices at the booster club headquarters. But do not get the impression that the booster movement is without distinctly esthetic influence. The boosters organize "flower-and-shade-tree-planting movements," "clean-up days," "rose festivals," flower carnivals. The first work of the small town getting the booster fever is for paved streets, a new lighting system, a high school, or a better water system. And the boosters join forces with all manner of other improvement organizations, women's clubs, etc.; they put ginger in every good roads' movement and every kind of enterprise for making the most of scenic advantages.

The fact that a little Willamette Valley town, or a Southern California village plants a flowered park alongside its railway station, because "it's good business," detracts nothing from the ensuing charm to the passing tourist, or welcome to the arriving colonist. The railroads, too, are stimulated to build more tasteful and substantial depot buildings. This same spirit has brought, even in small towns, the handsome club-house or luxurious headquarters of the commercial organizations themselves. But beyond everything else, in an ethical sense, is the broadening influence upon whole communities, and the promotion of kindly feeling between towns; the cultivation of such courtesy, for example, as leads one country town to cancel an important celebration-date conflicting with a festival at another. The very exercise of hospitality to visitors, as giving receptions, dinners, and automobile trips about the neighborhood, is not without an elevating influence.

"Let the Chamber of Commerce take it up," is the common suggestion in every Western town when any public matter comes up. The Chamber of Commerce, Commercial Club, Board of Trade, Promotion Committee—whatever it may be called—is the mouthpiece of the whole business community: it advises the City Council, the State Legislature, and Congress. It prepares statistics and reports, works for big State affairs, entertains distinguished visitors, fights a "Spokane Rate Case" to a finish. The club secures the cooperation of the railways, which grant colonist rates during certain seasons and provide special trains and excursion rates to State and county fairs, special agricultural and horticultural displays, irrigation conventions, and congresses of all kinds. The organization arranges the "Welcome to the Fleet," passes soothing resolutions during Japanese troubles, starts a "Made-in-California Day," gets up a great permanent exhibit of the State's resources, publishes a hundred thousand booklets or folders, starts a subscription for a relief fund after some disaster, carefully considers proposed laws, reaches out to secure for its city national conventions of every character, sends delegates to all public affairs of importance to the West, starts the movement for a Lewis and Clark, or an Alaska-Yukon-Pacific Exposition, organizes a great national apple show at Spokane—all of which is part of the Booster Game.

A lot of work is done without brass-band methods. If a town cleverly manages to secure some new industry or great private enterprise, it is not wise to brag. The newcomer wouldn't care to be told that he was "guided," or to have it known to everybody what, if any, special concessions he was offered. The secretary of the booster club is the repository of many business secrets. Time

Patriotism and Waste

The Obligation Now Resting Upon the American People to Conserve the Natural Wealth and the Productive Vitality of their Continent

By CHARLES RICHARD VAN HISE

THE laws of Congress for the distribution of both land and minerals contemplated that not more than a small parcel should go to any one individual. Thus, excepting the very early ones, our land laws have limited the amount which one person might enter to 160 acres. This is true of all lands, agricultural, forest, stone, coal, or otherwise. The Homestead Acts succeeded in getting the land widely distributed, but the commutation amendments, by which the five years of residence was commuted after a brief time by the payment of $1.25 an acre, have been from the outset the cause of speculation and fraud, resulting in unlawful concentrating in the hands of large holders of great and immensely valuable areas of the public domain.

Homesteads Swallowed in Timber Holdings

ACCORDING to H. H. Schwartz, chief of the special agents of the General Land Office, an "actual inspection of hundreds of commuted homesteads shows that not one in a hundred is ever occupied as a home after commutation. They become parts of some large timber holding, or parcel of a cattle or sheep range." He further says: "It has been my experience and observation in ten years' field service that the commuted homestead is almost invariably an entry initiated with a full intent never to make the land a home." Under the commutation amendments 35,000,000 acres of land have been acquired, which Mr. Schwartz estimates were worth more than $350,000,000 at the time the title left the Government.

In reference to the Timber and Stone Act, the same authority says that "not over a fractional part of one per cent of the timber lands purchased from the United States under this act is held, consumed, or even cut by the parties who make the entries." These timber lands, which cost $25,000,000 "at the date of sale, were reasonably worth $240,000,000."

It is a curious fact that the word minimum in the Timber and Stone Act, under which land not fit for agriculture "may be sold at the minimum price of $2.50 per acre," has been interpreted by the Land Department to mean maximum. That this term did not mean maximum was only discovered December 1, 1908, or thirty years after the law passed, at which time the perfectly obvious meaning of the law was attached to it by governmental order. It is useless to surmise as to the forces which led the Land Department to interpret the word minimum to mean maximum, and to maintain this interpretation for thirty years. But the result has been that the public domain has been despoiled of more than 10,000,000 acres of valuable timber land at not to exceed one-tenth of its real value.

The Unlawful Enclosure of Land

THE extent to which the fraudulent entries of land has been carried is but suggested in the past seventeen months' work of the special agents of the General Land Office, who have released from unlawful enclosure more than a million acres of public land, and have forced ninety-four convictions, leaving more than a thousand cases set for hearing and trial before local land offices. Added to these there are pending in the Department of Justice and in the United States courts more than a thousand more; and before the special agents are thirty thousand additional cases requiring investigation. To this must be added the obvious truth, that there are too many cases of successful fraud to every one that is detected.

Now that our national resources have largely passed into private hands, at the beginning of this twentieth century we have for the first time taken stock of our resources and find that they are not inexhaustible. On the contrary, they are extremely limited as compared with the probable future needs of the nation.

Of our mineral resources, coal and iron are those of the first importance. To manufacture our coal deposits took many millions of years of labor of earth and sun. Fortunately for us, the coal fields of the United States are more extensive and more valuable than those of any other nation. Until fifty years ago they were practically untouched, but during the last half century their exploitation has gone on with such ever-accelerating ratio that if continued our coal will be exhausted by the middle of the next century.

In taking coal from the ground, for every two tons extracted one ton has been wasted. The coal mined is consumed by methods which in many places utilize only a small percentage of its efficiency.

The Dissipation of Resources

PETROLEUM and natural gas, which are supplements to coal, are also subjected to wanton waste. Natural gas is now being wasted at the rate of a billion cubic feet a day, by being blown into the air. In Louisiana great spouting wells of gas are burning in the open atmosphere, doing no good whatever to anybody. It is estimated that there are thus consumed in that State alone seventy million cubic feet per day, more than enough to supply Boston, Baltimore, Washington, Cleveland, Detroit, Milwaukee, and Pittsburg.

If the present rate of increase of exploitation of high grade iron ore continues, the supply will not last more than fifty years. In the not distant future it is certain that we shall be obliged to turn to the lower grade ores, of which the quantity is vastly greater, but the smelting of these ores will make a much heavier draft upon our coal supply.

Like coal and iron, the output of copper and zinc has more than doubled during recent decades, and the product of the past ten years is greater than the entire previous history of exploitation of these metals in this country.

Each year, not considering loss by fire, we are consuming three and one-half times as much wood as is grown. It is estimated that we allow twenty million acres of forest to be burned over annually. Of the timber we take, from one-fourth to one-half is lost by our wasteful methods of cutting and manufacture. Already within a little more than a century of the life of this nation approximately one-half of our forest products are gone. Our system of taxation of forests encourages rapid cutting rather than conservation. We must reform our tax laws concerning forest products; we must eliminate forest fires; we must use economically the wood cut; we must reduce the total amount used per capita until the growth of one year is equal to the consumption of that year.

Our water resources, including water for domestic purposes, for irrigation, for navigation, for power, are enormous. As yet they have been only very partially utilized. Fortunately, the water continues in undiminished quantities, being ever withdrawn from the ocean through the power of the sun, and ever falling upon the land. It is a perpetual resource.

Water Powers Owned by the Few

IF OUR streams are fully developed so as to furnish the greatest facilities for navigation, and at the same time the largest amount of water-power, this will reduce the quantity of coal required for transportation and for the development of the industries of the country by a relatively small amount, and at the same time will enormously decrease the erosion of the soil, since the development of the streams for navigation and for water-power will require the storing of storm waters in reservoirs and the maintenance of forests at the heads of streams. At the present time very large holdings of the best water-powers are in the possession of a few great corporations.

Of all of our natural resources the soil is by far the most important. The rich deep soil which originally covered the United States required millions of years for its manufacture, and it is the most precious of our natural heritage. Under natural conditions soil is formed somewhat more rapidly than it is washed away. Although our nation is very young, although more than half of our cultivated land has been cultivated less than fifty years, already the soils are seriously [illegible]

These

The Spirit of California

By RUFUS STEELE

I AM Ariel freed of a master;
I am Puck lacking Oberon's ban;
When the lotus is ripe, hark my Pandean pipe,
For I'm Peter the godchild of Pan.
I am Iris, my brush is a rainbow;
Endymion awakened am I;
In the breast of the tree Hamadryad I be—
With Sequoia I tickle the sky!

IN THE orchard I hang my round beacons—
Ah, Calypso, less potent thy lute!
And men come to seize and lean strip my trees,
For I'm nectar that sweetens the fruit.
My breath have I blown on the melon:
When the honey bee, laden, starts home
I follow his tracks, leave my kiss on his wax:
The poppy I've sprinkled with chrome.

I MASK me in gold in the wheat-fields,
And I laugh at the reaper's sure tread—
The sheaves are alined, it is me they would bind:
I am soul of the grain, I am bread.
In autumn men seek me in vineyards;
The purple which lures them is mine—
"The capture is nigh; quick, the press!" is their cry:
I am blood of the grape, I am wine.

O, I'M secret of life-giving rivers;
I am balm that exhales from Health's cave:
Consumed in each kernel, I live on eternal,
I am Master of Life, I'm its Slave.
From the battlements of the Sierra
The Pandean pipe I swing free,
And my far-floating tune, in the stillness of noon,
Weaves a spell from the peaks to the sea.

The Value of Maneuvers

Mimic War Should Be Waged Annually for the Education of Staff and Field Officers

By Major-General LEONARD WOOD, U. S. A., Commander of the Department of the East

As large maneuvers as possible should be held each year on the Atlantic, Pacific, and Gulf Coasts. I know of nothing which will give our officers and men better training or to tend to so effectively prevent a repetition of the confusion and difficulties which we experienced at the outset of our late war

The recent maneuvers demonstrated that our militia troops require more field training, and that the officers of the staff corps need much more opportunity to become fully acquainted with their duties under conditions of field service. They have also shown the excellent qualities of the militia

THE practical value of maneuvers is in giving officers and men of the regular army and organized militia training in the work they will be called upon to do in war, and in furnishing general officers of the regular establishment and organized militia much-needed training in handling bodies of troops approximating in size commands their rank would entitle them to, in furnishing the officers of the supply corps valuable and most necessary experience in supplying and transporting troops in campaign, and to officers of other staff corps—medical, signal, ordnance—practical training under conditions closely simulating those of war.

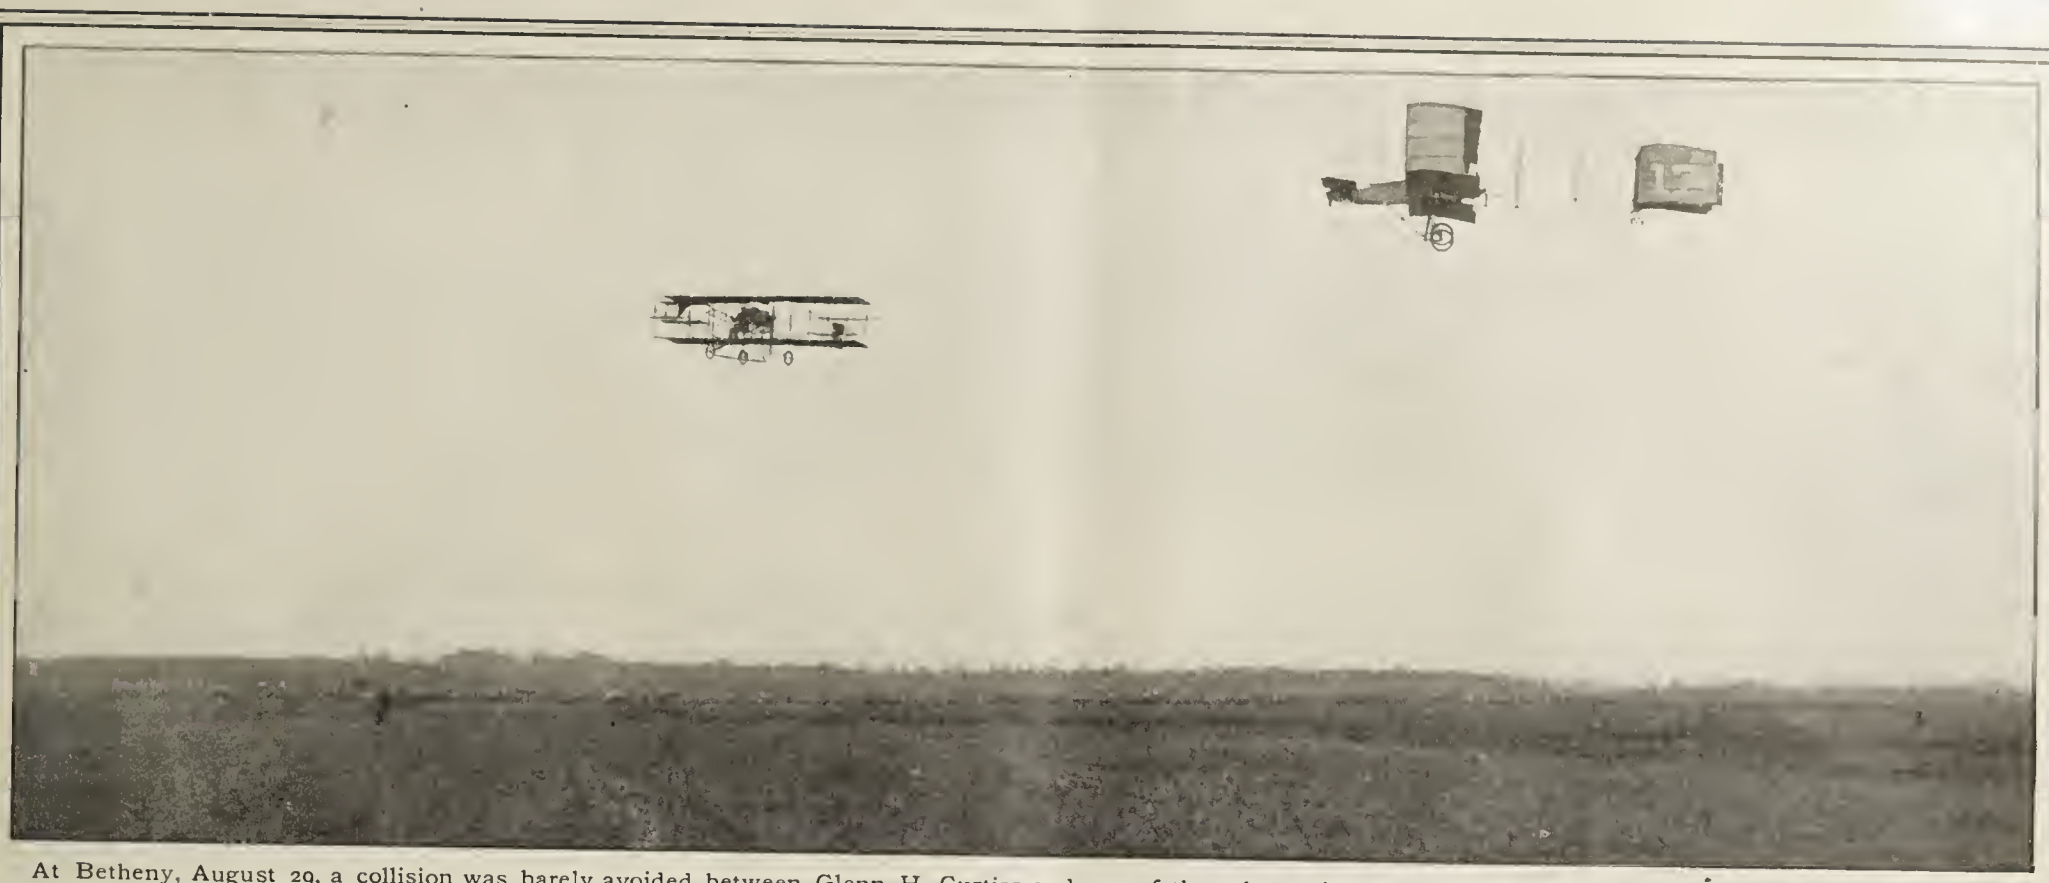
To be of the greatest value, maneuvers should require the rapid mobilization of all arms and assembling of necessary supplies, equipment, means of transportation, etc., and the transport of the same to the theater of the proposed operations. All this work should be on lines identical with those which would be followed in case of hostilities. If the maneuvers have been well-planned and conducted, the supplies and baggage, while sufficient, will be only that necessary for the well-being of troops in the field and the successful accomplishment of the object laid down in the general proposition governing the operations. This mobilization of troops calls for all that detailed preliminary work with reference to land and sea transportation which would be required in case hostilities existed. It tends to bring out the defects in the supply system, to demonstrate the competency or incompetency of the general officers and officers of the staff corps, the adequacy or inadequacy of the troops, and the condition of preparedness of the commands for actual service; in other words, shows whether we have a well-built, smoothly running machine, or a collection of loose, misfit parts to be assembled and fitted after operations commence.

Broken Country Should be Chosen

THE theater of operations, if well chosen, will be extensive, with forests, lakes, rivers, open country, broken country, swamps, etc. The opposing forces are mobilized at some distance from each other. When this has been accomplished, the commanding generals find themselves face to face under conditions very similar to those which would exist in case of actual hostilities. In front of them, from twenty to forty miles away, is a force of all arms representing a hostile army. The proper conduct of the operations imposes upon them a procedure which makes their movements as like those of war as it is possible to have them in time of peace. Each army commander makes every effort to locate the forces of the enemy, learn his strength, divine his intentions, and then check him, ultimately defeat him, and capture or destroy his forces. The staff departments, once they are informed as to the general scope and plan of operations, are called upon to support it by the maintenance of communications, prompt transportation of supplies, etc., etc. All this puts to a practical test the training which the officers and men of the various corps have received, and brings out their capacity to apply it. The line troops—infantry, cavalry, artillery, and engineers—are each called upon to perform the proper work of the arm to which they belong. The cavalry, assisted perhaps by a corps of cyclists, is doing its best to locate the exact positions and strength of the enemy, and ascertain his movements; the opposing cavalry is doing all it can to prevent this being accomplished and obtain similar information. The main body of each force is being placed in what is considered by its commanding general the most advantageous position. Each army commander is studying the country over which he is to operate with a view to making the best possible use of it for offense or defense. The question of the intelligent use of maps immediately becomes one of great importance.

When the theater of operations is sufficiently large for the proper conduct of the maneuvers, the first two or three days will be largely occupied by each force in developing its antagonist.

It is difficult to overestimate the value to officers and men of this experience, especially when it is remembered that, owing to the very small size of our regular [illegible] its scattered condition, and the comparatively [illegible] force of organized militia, many of our general officers have never had an opportunity to command even a provisional brigade or division under conditions simulating those of hostilities. The actual work and difficulties of moving an army are at hand, and all the details must be carefully worked out: the time of marching, in order that the troops may reach the desired position at the right time; the selection of roads, so as to avoid confusion and delay; the selection of the camp sites, not only with a view to their suitability from a sanitary standpoint, but also their adaptability to the military situation, are questions which demand careful attention, for each general officer must, if he is to be successful, have his command so placed as to be ready for action at the beginning of operations on each day. The supply departments have to adapt themselves to the general's plan, and have rations and other necessities at the points indicated. The realistic effect is largely produced by the careful carrying out of all details of security and information, escorts for trains, etc., and the use of blank ammunition; the effect which would have resulted from the actual conflict is furnished by the decisions of the umpires, who accompany each unit and observe closely all the conditions which surround it, and decide what would have happened had it gone into action under similar conditions. They note its strength, the way it is handled, its position, amount of ammunition, the character and strength of the attack against it, use of cover, dispositions to receive the attack, etc., etc., and decide that either the defense has been successful or the reverse. If, in their opinion, the attack has been of such a character as would have resulted in the capture or destruction of a portion of the command, they decide what percentage of the command would have been lost and rule it out of action for the rest of the maneuver period. So each day, if the maneuvers have been carefully carried out, we find a constantly changing situation. Gradually a situation is reached closely approximating that which would have been reached under combat conditions. One army finds itself so depleted and exhausted that it is compelled to fall back. Then comes, with all its difficulties and opportunities, the situation incident to the pursuit of a retreating army: rear-guard actions, attempts to cut off the retreat, etc. Every movement made on either side, the methods employed, the physical condition of the troops engaged, the way they are marched, fed, and fought, are taken into consideration by the umpires, and they decide, as already indicated, in accordance with what they believe to be the merits of the case.



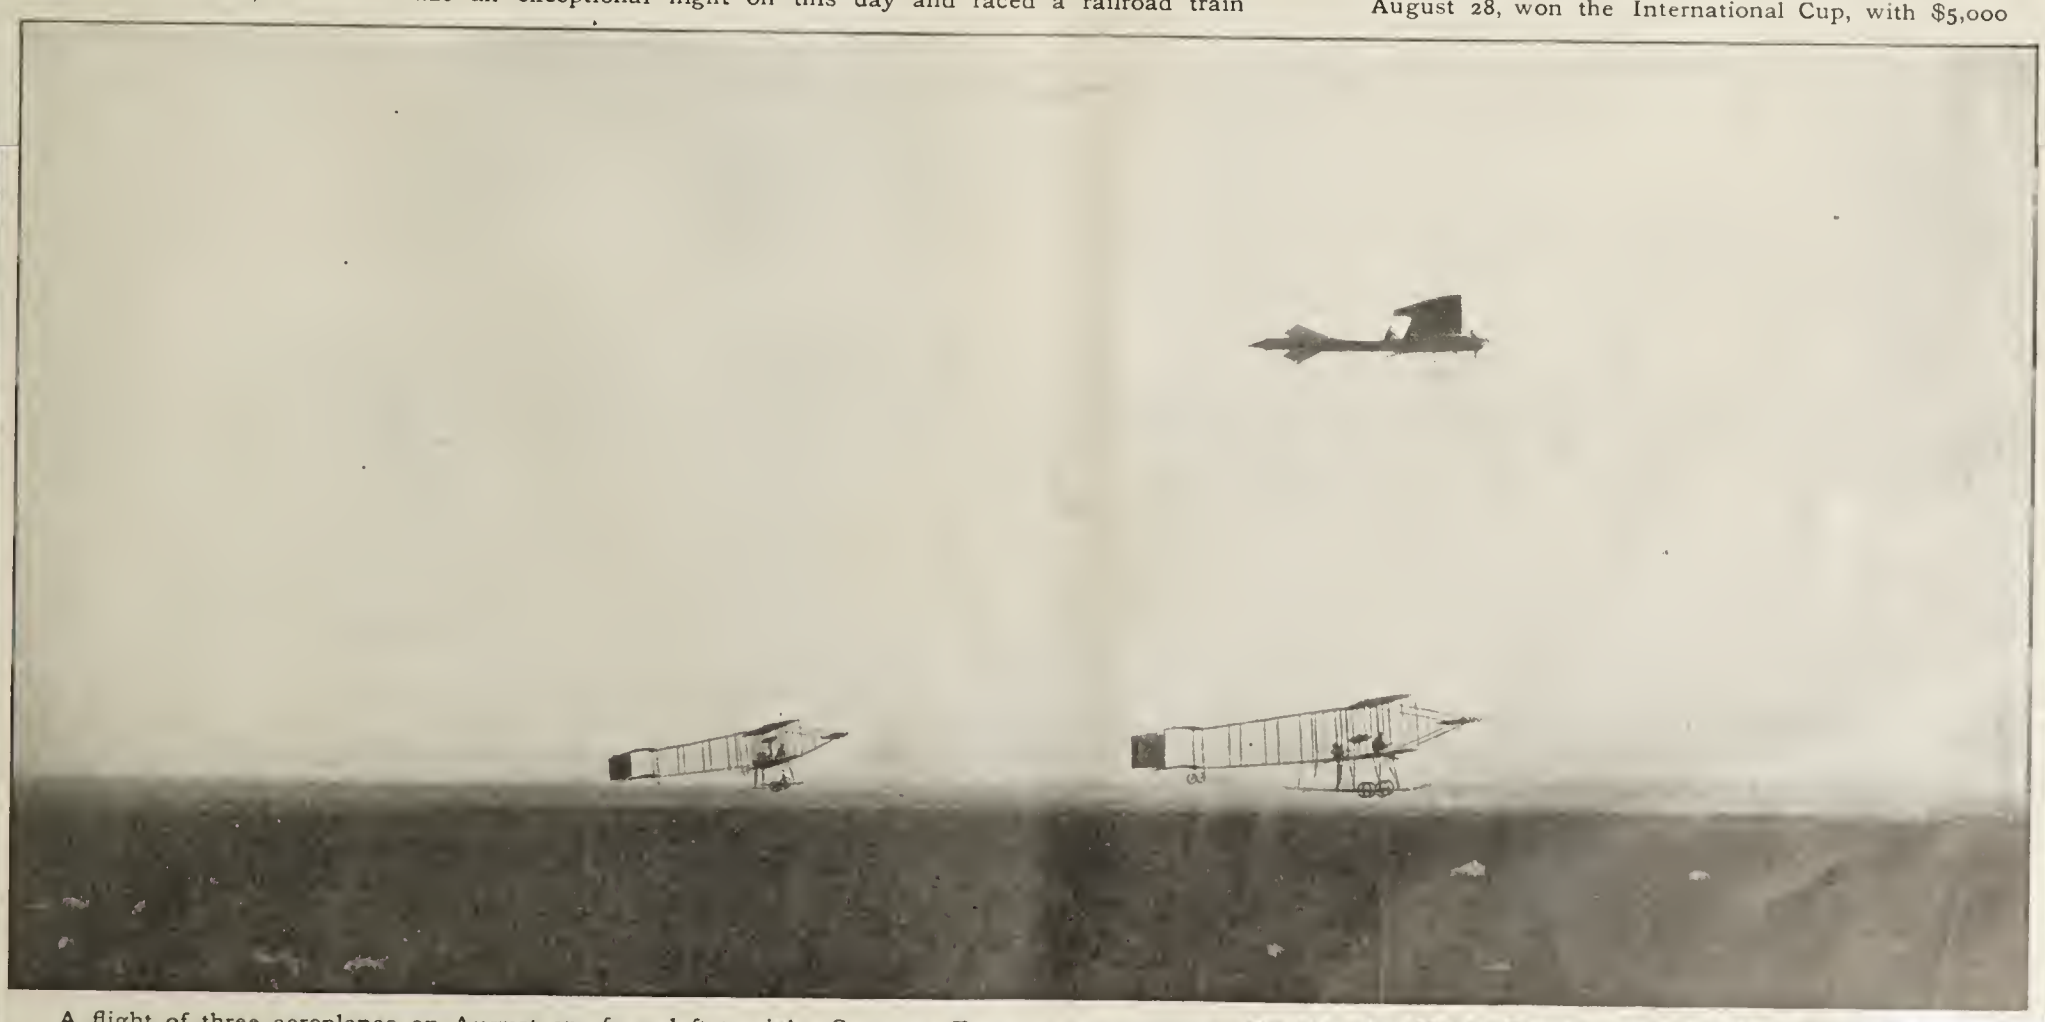
Major-General Leonard Wood

To make maneuvers especially interesting and valuable, not only to the troops engaged, but to the public, it is desirable that they should be held on ground on which fighting would probably take place in time of war. Such ground is furnished by the natural lines of approach to our great ports and seacoast cities. Operations in these areas demonstrate the facility or difficulty with which these places can be attacked, teach familiarity with the country and indicate the best methods of defense, and the further fact that seacoast defenses are not intended as, nor are they, a defense against anything except fleets, and that their real object is to prevent the entrance of fleets into our harbors, the bombarding of the cities on them, and the landing of troops at points immediately adjacent to the port. Once the public appreciates this, it will recognize the necessity for a well organized, efficient mobile land force to meet attacks from the land side. To obtain this it is imperatively necessary that we should organize provisional army corps, consisting of the troops of the regular establishment and the organized militia, with their rendezvous at strategic points; to this most important subject we have paid too little attention. The mobile troops of the regular establishment and of every organized militia unit should belong to one of these provisional corps, and should know the general rendezvous of the brigade and division to which they belong, and be prepared to join it on short notice. Officers commanding these brigades, divisions, etc., should be carefully selected in time of peace, and as large a portion of each army corps as is possible should be assembled each year in order that the officers may have a chance under conditions simulating those of war to handle bodies of troops approximating in size those they would be called upon to command in campaign. It is in this work that we are lacking, and it is the work above all others upon which will depend our success or failure in the early stages of war.

Actual War Except for Death

AS LARGE maneuvers as possible should be held each year on the Atlantic, Pacific, and Gulf Coasts. I know of nothing which will give our officers and men better training or tend to so effectively prevent a repetition of the confusion and difficulties which we experienced at the outset of our late war. To repeat, well-conducted maneuvers involve everything in the way of preparation, mobilization, transportation, and handling of troops, the study of country, the adaptation of its features to the best military uses, use of troops on the battlefield, in short, all except the actual fighting, and they will serve to impress on our people the necessity for the maintenance of an adequate regular army and a thoroughly organized and efficient militia.

The recent maneuvers demonstrated the feasibility of an attack upon the city of Boston from the rear (most of our great seacoast cities are equally open to such attack), and the difficulty of meeting such an attack even when made by a small force; that maneuvers covering large areas can be held in this country without serious damage; that our militia troops require more field training, and that the officers of the staff corps need much more opportunity to become fully acquainted with their duties under conditions of field service. They have also shown the excellent qualities of the militia engaged and indicated what can be accomplished by these troops when properly trained.



At Betheny, August 29, a collision was barely avoided between Glenn H. Curtiss and one of the other aviators. On this day the American won the eighteen-mile race in 25 minutes 49 seconds, bringing him a prize of $2,000, and came second to Bleriot in the lap contest. Bleriot rounded the course in 7 minutes 47 4-5 seconds

The bulletin board, on August 24, the day of President Fallieres's visit. Although the weather was unreliable, Paulhan made an exceptional flight on this day and raced a railroad train

M. Fallières inspects the Curtiss machine which, on August 28, won the International Cup, with $5,000

A flight of three aeroplanes on August 27—from left to right, Sommer, Farman, and Latham. On this day Henry Farman won the Champagne Prize of $10,000 for covering 112½ miles in 3 hours 4 minutes 56 seconds. This broke both the world's time and distance records for heavier-than-air ma[illegible]

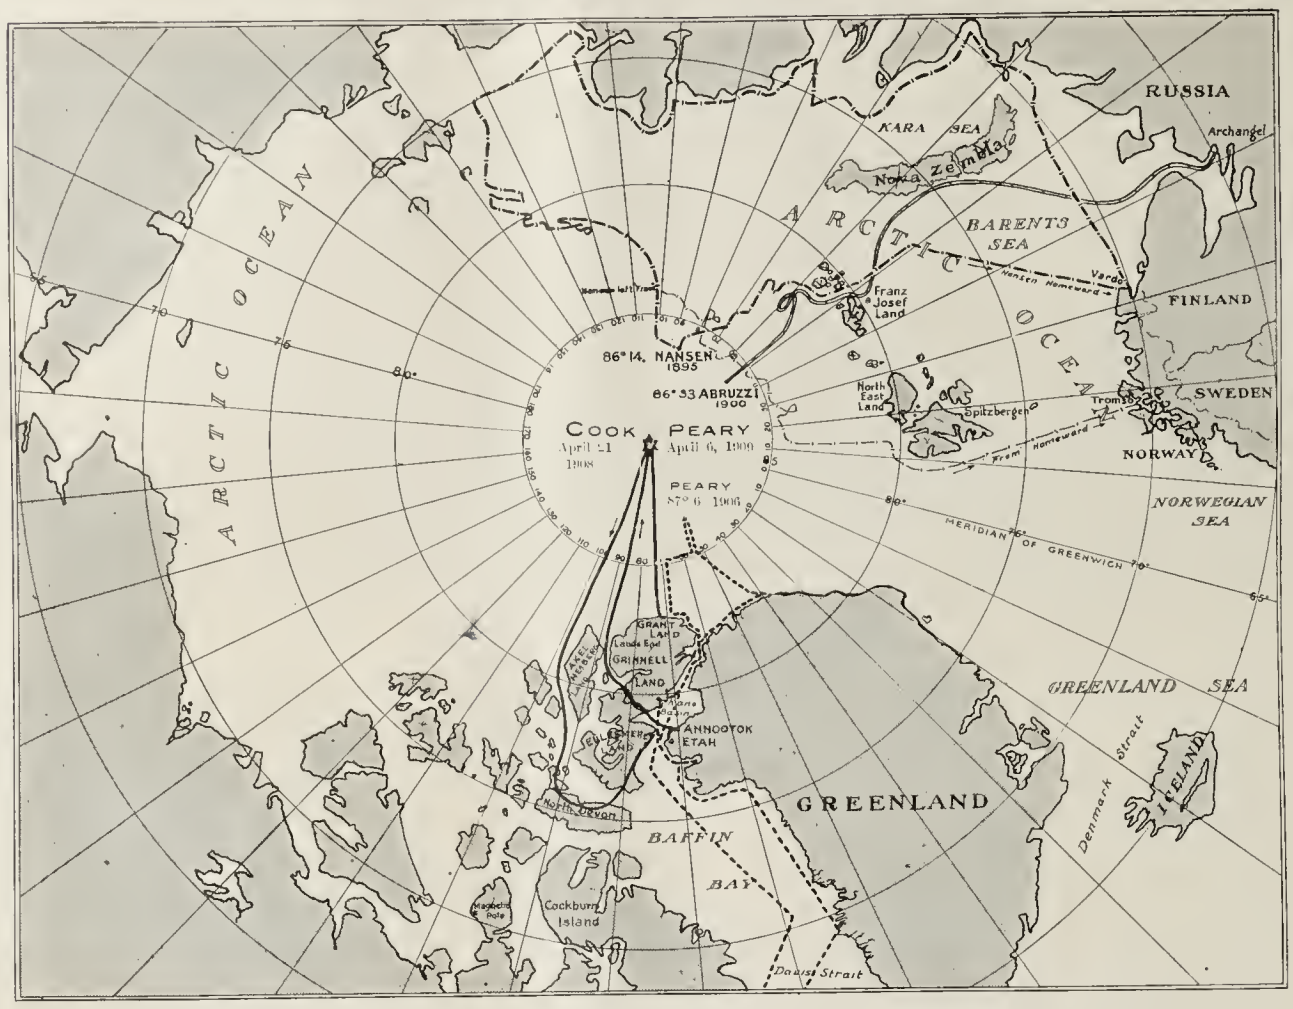
What the World Is Doing:



The American Flag at the North Pole

Fridtjof Nansen

The Norwegian explorer who came within 265 miles of the Pole, going by the New Siberia Islands in 1895. He was prominent in securing Norwegian independence

ON April 21, 1908, Dr. Cook's observations indicated that he was in sight of the Pole. Taking the story at its face value, the following are points of emphasis. The doctor buried a brass tube in the ice, containing a record of his achievement, and planted the Stars and Stripes above it. He describes the prospect as "an immensity of dazzling snow," in which he and his two men with their dogs were the only pulsating beings. He could not believe it possible that "this desolate region, without a patch of earth, had aroused the ambitions of so many men for so many centuries." Dr. Cook's rhetoric, as well as what real indications there may be in his favor, received a heavy jolt when Peary cabled his absolute disbelief. Commander Peary's warning to the world not to accept Cook's tale with too much seriousness, was published on September 8, and was promptly met with protestations of innocence by Dr. Cook

The routes taken by Dr. Cook and by Peary—also those of Nansen and Abruzzi

The Duke d'Abruzzi

The Italian nobleman who has recently been exploring the Himalaya Mountains, and who pushed north, in 1900, as far as 86° 33′, or within 239 miles of the Pole

WHATEVER be the sifted facts and the final result of the controversy which is now being waged, there is, apparently, no doubt that the North Pole has been discovered at last and discovered by an American. The mystery of the frozen North is no longer a mystery, and the goal of centuries of dreaming and effort is now behind us. Peary's report was accepted at once. Dr. Cook's will apparently divide opinion until all of his material has been examined.

The first statement of the discovery of the Pole came on the afternoon of September 1. From Lerwick, in the Shetland Islands, by way of Copenhagen, came a cable from the Danish Government Inspector of Greenland that he had with him on board the *Hans Egede* Dr. Frederick A. Cook, who asserted that he had reached the North Pole on April 21, 1908. On the same afternoon a brief cable message from Dr. Cook to his wife, stating that he had been successful, was received in Brooklyn. The next morning in the New York "Herald" appeared Dr. Cook's first cabled story of his achievement—a document whose vagueness and somewhat curious phraseology failed to convince many and promptly aroused a storm of controversy.

On September 4 Dr. Cook arrived at Copenhagen on board the *Hans Egede*, and was promptly swallowed up in demonstrations of enthusiasm such as few, if any, explorers ever received before. King Frederick of Denmark and the royal family, all that was brilliant and distinguished in the society of the Danish capital, and the people at large joined in unrestrained enthusiasm in Dr. Cook's honor. On the evening of September 7, at the height of this reception, while Dr. Cook with a garland of pink roses about his shoulders was seated at a supper given by the editor of the Copenhagen "Politiken" to the foreign correspondents, came the news from Peary that he had "nailed the Stars and Stripes to the North Pole." A dénouement so dramatic has probably never occurred before in the history of exploration. The European demonstrations cooled very rapidly after Peary's absolute denial of all the claims of Dr. Cook.

The two discoverers are men of very different type and experience, and the preparations which each made to attack the mysterious North were different. To Commander Peary success came after twenty-three years of almost continuous polar research, during which he had made eight trials for the Pole. The quantity and quality of his equipment were known to all and discussed for months before he sailed, and he was accompanied by men of scientific knowledge, whose investigations would, it was hoped, fill in many of the gaps in our knowledge of the Arctic regions, whatever might be the result of the polar dash.

Peary sailed on the steamer *Roosevelt* on July 6, 1908. Professor Ross G. Marvin of the Civil Engineering Department of Cornell, who had been with the previous expedition, went along as assistant navigator. Professor D. D. McMillan and George Borup of Yale were the naturalists of the party. Dr. J. W. Kensell of New Washington, Pennsylvania, was surgeon—a position which Dr. Cook himself had filled on one of Peary's previous trips—and Captain Bob Bartlett, a Newfoundland man, had his old position as master of the steamer.

Dr. Cook, while not a novice at exploration, was little known to the public at large, and few were aware when he left America on the converted yacht *John R. Bradley* in July, 1907, that he intended eventually to make a dash for the Pole. Dr. Cook was born at Callicoon Station, Sullivan County, New York, in 1865 of an old Dutch family, originally called Kock. He was educated in the Brooklyn public schools, took his degree of M.D. from the University of New York in 1890, but only practised his profession incidentally.

He was surgeon on the first Peary expedition in 1891-92; assistant in command of the Miranda expedition which ended disastrously in 1894; surgeon and anthropologist of the Belgian Antaretic expedition, 1897-99, and surgeon in the Peary expedition, 1901. He also claims to have climbed Mount McKinley. His party on this his second attempt to ascend the great Alaskan mountain became divided and one-half returned to Seattle and alleged that Dr. Cook had failed. Cook came back later with the assertion that he had gone with one companion to the top. Although he had more or less evidence to support his statement, Mount McKinley is still, officially, an unclimbed peak.

Dr. Cook, according to his story, planned to make his dash in the winter on the theory that the ice would be firmer then and less broken by open water. He started from Annootok, near Etah in Greenland, February 19, 1908, and proceeded across Smith Sound and Grinnell Land westward. He had then eleven men and 103 dogs. The party reached Land's End on March 18, and from here, with two Eskimos and 26 dogs, Dr. Cook says he started on the final dash of 460 miles to the Pole. Between the 87th and 88th parallels there were indications of land ice, although no positive sign of land or sea. When the Pole itself was reached there was, in the Doctor's florid style, only "an endless field of purple snows. No life. No land. No spot to relieve the monotony of frost. We were the only pulsating creatures in the dead world of ice."

Peary's outline of his performance was published September 9. He left Sydney July 17, 1908; arrived at Cape York, Greenland, August 1; left Etah, Greenland, August 8; arrived Cape Sheridan, at Grantland, September 1, and wintered there; left the *Roosevelt* on sledges February 15, 1909; arrived Cape Columbia March 1; passed British record March 2; passed Norwegian record March 23; passed Italian record March 24; passed American record March 28; North Pole April 6; reached Cape Columbia April 23, arriving on board *Roosevelt* April 27; left Cape Sheridan July 18; passed Cape Sabine August 8; left Cape York August 26.

Commander Peary himself held the best previous record of 87 degrees 6 minutes, which he made on April 26, 1906. The record before that was made by the Duke of the Abruzzi's expedition, which pushed to 86 degrees

The Umbrellas That Realize Your Ideals

HAVE you often wondered why someone did not make **your** kind of an umbrella—something a little better than ordinary—a little finer than just plain good?

You could always have obtained such umbrellas had you known. For years K & H umbrellas have been the kind that realize the highest ideals of a good umbrella.

They have all the necessary practical qualities—strength of frame to withstand the stiffest gale; tested fabrics to shed the rain; extra close roll to give utmost trimness and convenience.

And in addition, K & H umbrellas have all the "extras" which any umbrella can have—but which, as a matter of fact, no other umbrella does have.

For **one** thing there is the K & H **detachable handle** that you can take off at any time and put in your pocket—securing it against loss—or pack in trunk when traveling.

There is the non-rustable steel rod with nickel-dipped copper tip which does not wear off.

What is more, K & H Sterling Handles are all made in **heavier-than-ordinary-silver** (28 gauge) while K & H Virgin Color Gold Handles are **warranted not to show black seams.**

Each and every one of these "extras" is an exclusive feature of

K&H

QUALITY Umbrellas

Anyone of the advantages named would give K & H umbrellas unquestioned superiority. Together they make K & H Quality absolute. You readily recognize it.

Would you appreciate a guaranteed umbrella?

K & H Quality stands for finished workmanship, original design, good service and exclusive advantages—all the result of attaining **our** umbrella ideals—and **yours.**

Look for the K & H trade mark on handle, rib or in crown of every K & H umbrella. It goes on no umbrella that falls short of K & H Quality—the highest. Hence it is your protection.

K & H Umbrellas Make the Most Attractive Gifts

For all occasions, for all ages and for either sex, the one article you can always give with the certainty that it will be welcomed and **used,** is a K & H umbrella. It is the one always acceptable gift.

K & H Detachable Handles Outlast Several Umbrellas

And save you the vexation of loss, for the handle can be taken off and slipped in the pocket. K & H Detachable Handles are the only absolutely fast handles because the **only** detachable handles with corrugations.

K & H Folding Canes (see cut) go in an ordinary suit case or grip and are a great convenience to travelers.

Write For Suggestion Book

In order that you may know the fine points of K & H umbrellas fill out and mail the coupon at once and we will send you an elegant book of K & H umbrella designs, describing them and telling more about K & H Quality. Mail the coupon and get the book promptly. You will find it worth while.

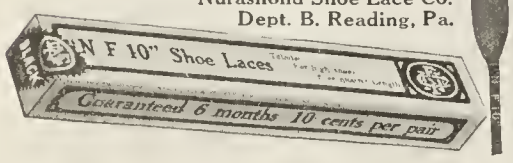
The only guaranteed shoe laces

No other maker guarantees shoe laces; but it is only natural that we should, because we put out the best shoe laces ever made.

"N F 10" Shoe Laces have no equal for strength and long wear. Made of highest-grade long-fibre Sea Island cotton, especially processed.

They are tubular and pressed flat—no edges to fray and they won't come untied. They have patented tips—dull black fast color—that won't come off the laces.



And we stand back of every pair of *"N F 10" Shoe Laces* with our

6 months' guarantee

10 cents per pair—black and tan, in four lengths for men's and women's shoes. At all shoe and dry goods stores, and haberdashers. Every pair of the genuine *"N F 10"* is in a sealed box and has "N F 10" stamped on the tips—your protection against imitations.

If your dealer hasn't *"N F 10"* we'll send them on receipt of price. Write us anyway for illustrated booklet which shows our complete line of shoe laces, including our patented *Nufashond* for oxfords

ATWOOD SUSPENDERS

The kind with the "Adjustable Back."

The only suspender that can be adjusted at five different points.

Fits All Wearers.

We allow but one agent in a city.

Mr. Dealer, here is your opportunity.

Sample pair sent on receipt of $.50, postpaid.

ATWOOD SUSPENDER COMPANY
Schenectady, N. Y.

33 minutes on March 22, 1900. Nansen, the former holder of the record, got as far as 86 degrees and 14 minutes in 1895.

Expeditions into the Arctic regions have been made ever since Sir Hugh Willoughby sailed in 1553 "for the search and discovery of northern parts of the world," and the Scandinavian peoples undoubtedly ventured into the mysterious region long before that. Henry Hudson, in 1607, reached latitude 73 on the eastern coast of Greenland. The ill-fated expedition of the English Admiral Sir John Franklin to find the Northwest Passage is one of the most famous of Arctic undertakings. Franklin sailed in May, 1845, with two ships and 129 men. In all about fifteen rescue expeditions were sent out between the years 1848 and 1854, and a great deal of Arctic knowledge was gained, but the unfortunate Admiral and his men were never heard from except through the brief records they left behind them under piles of stones. The only really serious balloon attempt was that of the Norwegian Andrée, which started from Spitzbergen in 1897. Except for a message by carrier pigeon, received two days after his departure, and bits of wreckage, nothing has ever been heard of him or his two companions.

The holders of the farthest-north record at various times have been:

	Degrees	Minutes
1588—John Davys, Eng., ship	72	12
1594—Wm. Barents, Hol., ship	77	20
1607—Henry Hudson, Eng., ship	80	23
1773—J. C. Phipps, Eng., ship	80	48
1806—W. S. Scoresby, Eng., ship	81	50
1827—W. A. Parry, Eng., ship	82	45
1875—G. S. Nares, Eng., sledge	83	20
1882—A. W. Greely, Amer., sledge	83	24
1895—F. Nansen, Norway, sledge	86	14
1900—Duke d'Abruzzi, It., sledge	86	33
1905—R. E. Peary, Amer., sledge	87	6

Between these dates there have, of course, been various attempts, among the best known of which are the American expeditions conducted by Dr. E. K. Kane, 1854; by DeLong in the *Jeannette*, 1879; and the Ziegler-Fiala party in 1903.

Railroads in China

TWO treaties between China and Japan were finally signed September 4. China had wished to refer to the Hague Tribunal the most important matters in controversy, but Japan, with Great Britain behind her, preferred to carry out her will. Nevertheless, China was able to obtain far more consideration than she formerly had from Russia, and, in being forced to consent to wider gage for the Antung to Mukden railway, she did only what was an implied part of the Pekin agreement of December 22, 1905. One of the treaties, dealing with Itsientao, fixes boundaries satisfactory to China, creates open ports at Lungchangchun, Chutzeha, Taotokou, and Peitsokou, and forces China to borrow from Japan half of the money to extend the Kirin line eastward, an extension which is restricted to connections with the Korean line at Huining. The other agreement forbids China to extend the railway north from Hsiuimintun without Japan's consent, transfers the Tsaishichao line to the South Manchurian, and permits an extension on the south to Newchwang; gives Japan and China equal voice in the proposed railway station at Mukden city, and gives to the two countries joint mining privileges along the South Manchurian and Antung Railroads. The few other details further emphasize the control of Japan in Manchuria: the fact that the Portsmouth Treaty does not bother her, but also the fact that Japan's control is less absolute, as well as less extensive, than Russia's used to be, and that China has a growing influence in the settlement of her own affairs. One of the most important changes for the world at large is that there is no chance of any one nation now having a monopoly of the entire trans-Asiatic railroad facilities.

Japan's Business Delegates

FORTY-SIX Japanese bankers, merchants, Members of Parliament, and editors, representing the Chambers of Commerce of Tokyo, Osaka, Kyoto, Kobe, Yokohama, and Nagoya, are in the United States studying commercial conditions. Baron Shibusawa, one of the party, has expressed the delegation's views concerning the importance of friendly commercial relations between the United States and Japan. "We must go hand in hand with you," he says, "to develop the vast fields in the East. My wish is that your abundant capital, combined with our better knowledge of local conditions, shall result in starting a sort of cooperative business relationship." At the Hudson-Fulton celebration in New York, Prince Kiniyoshi Kuni, a cousin of the Mikado, will represent Japan.

A Mayor's Troubles

MAYOR McCLELLAN of New York is in trouble again. A day after the removal by Governor Hughes of a borough president charged with various forms of graft, another borough president, the spectacular Bird S. Coler of Brooklyn, filed charges with the Governor against Mayor McClellan. These are, in substance, that the Mayor has been using his power to overhaul the offices of his subordinates as a weapon to punish men opposed to him politically. Accurate historians, in sympathy with McClellan, have called attention to the fact that the Mayor has ordered the investigation of the affairs of three borough presidents; two of these have been completed, and two borough presidents have been removed. The inquiry into Mr. Coler's office is not yet completed. On September 7 Judge Gaynor announced his intention of running for Mayor independently, but with hopes of a Tammany nomination. Judge Gaynor has some national reputation, and at the time of the last Democratic Convention at Denver was considered for the Vice-Presidency.

Speed in Travel

THE new accomplishments in speed are almost expected these days—it is difficult any longer to startle us. Ways to get from one place to another multiply almost daily, and distances disappear with each new sun. If we don't know where we're going, as the phrase has it, it least we're on our way.

The great *Mauretania* had scarcely made a new record for the east-bound Atlantic voyage when the *Lusitania* broke the west-bound record by nearly three hours. On the evening of September 2 the big Cunarder warped into her New York dock a few minutes before eight o'clock, four days out from Queenstown. She had left Queenstown Sunday morning and covered the course between Daunt's Rock and the Ambrose Channel lightship off Sandy Hook in 4 days 11 hours 42 minutes, cutting 2 hours and 56 minutes from the record made by the *Mauretania* on August 19. Her average speed was 25.85 knots. She was the first "Thursday boat."

The *Mauretania's* east-bound record was made on August 30. She made the trip in 4 days 14 hours 27 seconds. Her trip was also memorable for making a new record for mail and passenger transportation between New York and London. The *Mauretania* landed her passengers and mail at Fishguard, the new port of call for Cunarders in South Wales, instead of taking them on to Liverpool. Two trains were waiting, one for mail and one for passengers, and they covered the 260 miles between Fishguard and London in less than five hours. It was a great day for the little Welsh town, and all along the line of the Great Western Railway to London people gathered at the stations and cheered the trains as they shot past. The *Mauretania's* average east-bound speed was 25.40 knots..

Queenstown, it must of course be remembered, is in Ireland, and these records do not mean that one is able to travel from mainland to mainland in four and a half days. The actual elapsed time from New York to London, allowing five hours for the change of meridian, was 5 days 3 hours 40 minutes for the mail train, and 5 days 4 hours 28 minutes for the first section of the passenger train. In other words, passengers arrived in London on the evening of the sixth day out from New York and could get to Paris by the next morning.

On land, between three and five hundred miles are practically cut from the overland journey by James J. Hill's announcement that he intends to lop off ten hours from the running time of his fastest trains between Chicago and Seattle. This will mean a speed equal, or almost equal, to the fastest New York-Chicago expresses. The Burlington, Great Northern, and Northern Pacific have proposed to the Post-Office Department to put a new fast mail train in service between Chicago and Seattle to make the long journey in sixty-two hours. The fastest time heretofore was three days. This proposition from the Hill lines is due, it is assumed, to the fact that the St. Paul road will be in a position within two or three years to make fast time to the Puget Sound country and will, no doubt, go out after the mail-carrying business. The Burlington evidently hopes to capture the mail traffic before the St. Paul is ready.

By an alliance with the Louisiana Railway and Navigation Company, giving entrance from Baton Rouge to New Orleans by ferryboat, the Hill interests have just completed the last link in a line from the South to the Northwest which will compete with the Harriman lines. On September 1 the Frisco-Rock Island trains

Silk Socks 50c

THE greatest achievement in textile history. Genuine cocoon-silk half-hose now sell for the first time at the popular fifty cent price. Not mercerized, but **every thread guaranteed absolutely pure silk.** These socks are expertly knitted; seamless, shape retaining; fast color; and wonderfully good wearers. And American manufacturing skill enables you to get these remarkable half-hose at **fifty cents.**

Phoenix Silk Socks

Being made of pure silk, they are non-conductors of heat and cold and moisture: cool in summer, warm in winter; a relief for hot, aching feet.

Are made in nine richly beautiful fast colors:

black, navy, tan, burgundy, maroon, emerald, pearl-grey, taupe, helio.

SILK hosiery is now within reach of all—we've experimented for years to perfect these socks—we know they are the most remarkable hose ever produced. Don't wear cotton or lisle socks when you can get **better wearing, pure silk ones** for the same money.

Ask your dealer for Phoenix Silk Socks. If he hasn't them, show him this ad, or send us fifty cents for each sample pair you wish. Half a dozen in an attractive box for $3.00 postpaid.

SCHLOSS FASHIONABLE Clothes for Gentlemen

are ready at the BEST Clothiers everywhere.

If you want to enjoy Clothes Luxury—without extra cost—ask any good Clothier to show you one of the 1200 New Fall and Winter Models just out. These are **"the Clothes Beautiful"** in the world of Fashion—indeed the standard Fashion for fine tailors and good dressers.

SCHLOSS BROS. & CO.
Baltimore New York

A $25,000 Men's Fashion Book Free

The finest Fall Fashion Book we ever issued is now just off the press. Every new fashion—for every age and every occasion—is shown in a many-colored plate.

We have spent $25,000 to gather these styles and to picture them as shown in this book. The result is a classic in fashion.

Not the design of theorists, pictured in fashion-plate style. But the actual styles worn by men of refinement—gathered in every center of fashion by our own men on the ground.

This costly book is offered free to every man who wants to know what the best-dressed men will wear.

After Forty Years

Since 1869 Adler-Rochester Clothes have been known as the utmost in garments for men.

We were first to introduce into ready-made garments the highest attainments in the tailoring art.

We were first to send high-priced designers to the centers of fashion to gather ideas which smaller tailors could not get.

We were first to employ in a wholesale way the finest of custom tailors.

We were first to fit every type of man as the best tailors fit from individual measure.

And we have always, in all these arts, kept the ascendency, as nearly every man knows.

The book which we offer shows the final result of that forty years of experience. And it shows our choices from a thousand all-wool cloths.

Adler-Rochester Clothes

Not the Largest

Most of you think, perhaps, that Adler-Rochester Clothes have the largest sale in America. They have not. Our vast reputation is due to quality and style, not to size.

There are not enough experts developed, of the class we employ, to make clothes for one in a hundred.

In most cities and towns Adler-Rochester Clothes are supplied to only one dealer. And we supply that one dealer but a limited part of his stock.

The man who wears Adler-Rochester garments must always be the exception.

But those exceptions—young or older—can be usually picked out in a crowd. They are the best-dressed men you meet.

Not the Costliest

Nor are Adler-Rochester Clothes expensive, though most of you think that they are. Our suits and overcoats will run—like other good makes—from $18 up. Yet the best of them could not be excelled if you paid us $100 per garment.

We spend for making *four times* what some makers spend. We pay our tailors twice what we pay for our cloths.

There are not any clothes at any price on the market which give nearly so much for the money.

The reason is, our very small profits. They never exceed six per cent. Last year our average profit was exactly *97 cents per suit.*

Every penny we get, save that small profit, goes into the garments themselves.

That is why Adler-Rochester Clothes cost less than the commonplace.

For the One Man in a Hundred

This book is for men who want such clothes as only one in a hundred can get.

No matter what your age or vocation. We make the right clothes for all ages—for college or sport, for business or for society. This book shows them all, and in colors.

It is for men who want to know the right and the best, and where they can get it.

To them the book is free. Please send this coupon today for it:

started by ferryboat across the Mississippi at Baton Rouge. This was Mr. Hill's successful but costly answer to Mr. Harriman for the latter's capture of the Illinois Central from Stuyvesant Fish when that road was in the Hill alliance.

Pellagra and Corn Foods

FROM two such widely separated points as Peoria, Illinois, and Durham, North Carolina, alarming reports have come concerning the spread of Pellagra, a disease new to this country and of mysterious origin. The only theory so far advanced to explain it is that its victims have eaten moldy corn. Evidence, however, is conflicting, both in North Carolina and in Illinois, cases having been noted among victims known not to have eaten corn or any of its products. The United States army has ordered one of its bacteriologists—an expert on tropical diseases—to go to Peoria and study the plague.

The Brewers and Saloon Reform

IN LINE with a general scheme of internal reform, the New York State Liquor Dealers' Association, at its convention in New York City, proposed to take the lead in saloon reform. The convention's resolutions called for a law which should allow licensed saloons to remain open on Sunday between 1 P. M. and 11 P. M. They proposed, also, to limit the licenses issued by the State Excise Department to one for every 750 inhabitants. They suggested that no Federal licenses should be issued to saloons which did not hold State licenses. The association is to have a committee of investigation, whose duties will be to find out the location of "dives" and to keep the members (the brewers especially) informed.

Under a new law in Michigan, all the beer signs were torn down before midnight of August 31 and all the free-lunch places closed up. Under the State law saloons must close at nine o'clock, though in cities the local authorities have the right to extend the closing hour to midnight.

Meanwhile the anti-saloon forces in the South are not lagging in their campaign. The new Alabama law is a prohibition measure, and is expected actually to close all places in such cities as Mobile and Montgomery. In Georgia Governor Brown has definitely pledged himself to veto any legislation favorable to the liquor interests until the prohibition law has had a full trial. According to George Kibbe Turner, whose article, "Beer and the City Liquor Problem," appears in the September "McClure's," the battle between the brewers and liquor dealers and the Anti-Saloon League has resulted, in the last few months, in a deadlock. Florida and Tennessee have been captured by the temperance forces, while Texas, Arkansas, and Missouri have been kept in line by the brewers. So far the Anti-Saloon League has been credited with "bribing" five Southern States, securing a referendum vote in another State, and has come close to winning the Legislatures of three other Southern States.

Peonage at Pittsburg

GOVERNMENT investigation into the M'Kee's Rocks plant of the Pressed Steel Car Company of Pittsburg has shown that the accusations against the company of establishing a system of practical peonage in order to break a strike of their workers were well founded. Some hundreds of the men who have been held captive have escaped, and their stories agree on the details of their treatment inside the stockade. The first reports of the clash between the strikers and the State constabulary were exaggerated. The trouble started when a special deputy, engaged in evicting some of the miners with their families from company houses, drew a revolver and fired it over the heads of women who were jeering at him. Directly afterward these same women attacked another deputy and broke his head with a brick. Following this the constables charged the crowd and other officers came up in a street-car. Only a score of revolvers were found in the possession of the strikers. These were used to supplement the volley of bricks. Before the firing of the deputies and strikers had ended, seven men were killed. No strike-breaker was included in the list of casualties, although the company's stockade is situated at the bottom of three hills and was exposed to attack. The Pittsburg papers, which had minimized the charges of peonage, were swung around to condemn the Hoffstot management after the Government investigation had begun.

A Hot Fight in Kansas City

THE proper function of a vigorous newspaper, according to the Kansas City "Star," is to fight for the people of the city. The "Star" is illustrating its theory by opposing with every resource at its command, the ordinance granting a renewal of the Metropolitan Street Railway Company's franchise at this time. These franchises do not expire for sixteen years, but the interests in control of the street railway system are attempting to secure an extension in time of fifty years, dating from 1925. The "Star" is centering its argument on the point that in sixteen years conditions will have changed so that any agreement made now, no matter how fair, would not serve the city's interests sixteen years from to-day.

The Baggage "Smashers"

STIRRED by the increasing number of complaints of smashed trunks from travelers, the Kansas Board of Railroad Commissioners has issued an order that baggage handlers must not tumble a trunk from a car door on to a brick or stone station platform. The practise of testing the strength of a trunk by this ancient method was encouraged by both the station men and the baggage handlers in cars. It was not easy to guess the exact point at which the open door of the baggage car would stop at the station platform, and, rather than hustle a truck, they merely dumped the trunk clear of the track.

The Boosters

(*Concluded from page 23*)

was when a "publicity promoter" was not required to be a man of particularly high character. Now only trained men of reputation and all-round executive business ability are employed. They are ready and good speakers, and prolific of ideas, and enthusiasts in the work. The educational value of their talks and labors among business men is frequently acknowledged by the latter. "They taught us the value of advertising in our own business; they have shown us how to advertise in the right way."

"Tell the truth in your advertising; don't exaggerate; don't suppress facts; be frank—it pays in the long run." This is the advice one frequently hears these men giving at booster meetings, to the consequent good effect upon the publicity literature.

The most striking manifestation of the "get-together" spirit is the "Business Men's Excursion," initiated by the organized boosters. In 1905 a long special train, crowded with leading citizens of California, jolly, big-brained, broad-gage fellows, carried a wave of cordiality into Oregon on a visit to the Lewis and Clark Fair. They were entertained by the Portland Commercial Club. Some time later Oregon returned the visit, her representatives being received with enthusiasm throughout California. Since then the habit has become fixed. Puget Sound makes the grand tour, then Seattle and Tacoma individually. San Francisco dines with each of her sisters of the Northwest. "The Inland Empire Excursions," organized by Spokane and Walla Walla, have been tremendously successful. Southern California, headed by the Los Angeles Chamber of Commerce, greets Portland, Puget Sound, and Spokane. Shorter excursions are interspersed between the larger. Luncheons, banquets, speeches, auto rides are the regular features of entertainment. The effects are marked. The leading business and professional men from end to end of the Coast come to know each other like neighbors and fellow clubmen. These exchanges of amenities have contributed enormously to the spirit of solidarity and mutual helpfulness. For example, the whole Coast will boost for San Francisco as the place of the next National Republican Convention. They have led to the union of the Chambers of Commerce, helped the Alaska-Yukon-Pacific Exposition, aided in bringing the National Irrigation Convention to Spokane.

A party of "Honorary Commercial Commissioners" from the nine leading Chambers of the Pacific Coast have visited Japan, and now comes Japan with thirty representative commercial men and trade experts for a return visit. They are received by the Associated Chambers of Commerce of the Pacific Coast. Heads of the transcontinental railroads have agreed to cooperate, "and the special train carrying the Japanese gentlemen to all the industrial centers of the United States is the most significant move yet made in the direction of a larger commerce with the Orient"—and has it not a deeper significance still?

The first Derby made in America was a

C & K

KNAPP-FELT derbies excel those of other makes in various ways. The high quality of the materials and the close, firm texture render excessive weight unnecessary; the only machinery used in Knapp-Felt construction is in processes where a machine can do better work—mere cost saving apparatus is disregarded; the noticeable elegance of style is the result of the most artistic handwork, the C&K kind, and the color is produced by the steadfast Cronap dye from formulæ orginated and developed in the C&K shop.

The Fall and Winter styles of exclusive C&K design are unquestionably proper and are of sufficient variety to afford an opportunity for the selection of a shape which will harmonize with the individuality of the wearer—a distinct advantage over the antiquated method of making one model whose only claim to propriety is the name inside.

Knapp-Felt DeLuxe, the best hats made, are Six Dollars. Knapp-Felts, the next best, are Four Dollars—everywhere.

Benjamin Clothes MADE IN NEW YORK

NEW YORK creates and dictates fashions for all America. Here live the best-dressed men and the best-skilled tailors. New York Style is accepted by clothes-makers and wearers throughout the country as final and binding---as the decree of AUTHORITY, from which there can be no appeal.

Twice a year we launch a "New York Style Show" of **Benjamin Clothes** for Men and Young Men. Its purpose is to familiarize you with the *Authentic New York Styles* of the current season, as distinguished from styles which only mimic, and often mock, true fashion.

The "New York Style Show" for Autumn and Winter '09-'10 has just been inaugurated. You can see it at the **Benjamin** clothier's---always the *best* clothier---in your town or nearby.

If you prize the niceties of dress and prefer clothes of *metropolitan* grace and good form to garments lacking both, then survey the **Benjamin** Fabrics and Fashions now on view at your clothier's, or one within reach.

Our delightful "Book A. of New York Fashions" sent anywhere for 4 cents in stamps. It contains thirteen exquisite reproductions of *New York Styles and New York Scenes* in full colors. Address, Alfred Benjamin & Co., 436-440 Lafayette Street, New York.

Send For This Poster

("Troop A," Starting up Fifth Avenue, New York. Washington Arch in the background.)

WOULD you like a charming Military Poster for room or den—a Poster astir with dash and spirit? Above is a facsimile of the beautiful cover of our Autumn and Winter Book of NEW YORK FASHIONS, painted by T. K. Hanna. We have enlarged it to poster size, 19½ x 31½, and reproduced it in twelve brilliant colors and gold, ready for mounting and framing. Sent, postpaid, for 25 cents in coin or stamps.

For Fall, 1909
The "Herald Square"
A Corliss-Coon
Hand Made Collar
2 for 25c

"Herald Square" in three heights:
No. 1—1⅞ in.
No. 2—2⅛ in.
No. 3—2⅜ in.

An ideal long striven for, is the square point collar with folds meeting in front. We have solved the many problems presented in its manufacture and present in our "Herald Square" the perfection of style in this type of collar.

The usual price—2 for 25c.

Any new style in Corliss-Coon Hand-made Collars is, as a rule, immediately copied in the ordinary machine-made collars. We submit without prejudice, that the perfection of style, set and fit attained in our "Herald Square" will be impossible to duplicate. It will therefore be a distinct advantage to you to accept no copy of this style.

Most of the best Furnishers have our "Herald Square" for immediate delivery. Those who have not, can get them for you without delay, or we will supply you by mail prepaid on receipt of the regular price. Our style Book will help you in your selection of appropriate styles for all occasions. We will send it to any address, gratis, on request. Write for it today.

When You Specify—Insist On Carey's Roofing

AND you will insure *100% protection* for your building.

You will have a roofing of known quality—tested for 25 years; absolutely *standardized;* unvarying in manufacture, in texture, thickness and weight.

The Carey Roof is in a class by itself.

It has the unique quality of hardening—becoming stronger, more dense, in its *outer layers* as the years go by—

Carey Roofing is built, complete, by perfected machinery in our vast factories. You are positively assured of its superior quality *before* it is applied.

The Carey Roof is unaffected by extreme heat and extreme cold.

After the Baltimore conflagration, it was a common sight to see a Carey Roof standing alone in a whole district—the one roof that successfully resisted the flames.

The Carey Roof Standard

—While the wonderful, thick inner sheet of asphalt and other valuable ingredients—prepared and tempered by our special process—remains plastic and flexible. It never changes.

The Carey Roof Standard is your best guide to roofing satisfaction.

Architects and owners are fast realizing the uncertainty—the unsatisfactory results—of roofs manufactured, layer by layer, by workmen on top of the building.

Carey's Roofing is easy to buy. We have 46 general distributing points. Sold by leading dealers.

Before you select any roof, let us send you a sample—so that you can prove for yourself the superiority of Carey Roof quality; and our Book—full of photographs of buildings and interesting and important facts. Mailed postpaid on request. Address

Pacific Civilization

The Present Development of New Social Circumstances

By C. H. CHAPMAN

THE Seattle fair displays a world of material achievement which evokes wonder from the Eastern visitor, but to the wonder sometimes succeeds a sneer. "They are big enough out here in all conscience," he exclaims, "but what else are they? What are they doing to make life finer and happier? Climate and scenery aside, is the Pacific Coast a better place for men and women to live in than the older parts of the Union? What of their schools, their colleges, their literature, their art, their aspirations for human welfare?" Among authors the Pacific States have their share. California's literary glory shines with a luster at least as bright as Indiana's.

Portland's citizens have built by subscription a splendid art museum, in which there are hung the works of American and foreign masters and loan collections, and many contributions to these are made by wealthy Oregonians. In connection with this, a strong art school is rapidly growing. The cities of the Pacific States have their libraries, historical museums, and lecture centers, no less imposing and important in their community settings than the older cities of the East.

The Spread of Education

THE Pacific people are proud of their schools. If Jason Lee's old Oregon Institute and the Pacific University at Forest Grove have not yet attained the magnitude of Yale and Harvard, it is because the West works her colleges on a more democratic plan. The State universities of these sunset commonwealths are growing at a rate that will overtake the old endowed colleges of the East in probably less than twenty-five years. As an endowed college, our Stanford University, which is not yet twenty years old, has already overtaken Princeton in enrollment, with her century and a half of history behind her. Dr. David Starr Jordan was not very far wrong in saying that the educational pressure to the square inch is greater in California than anywhere else in the world. What with the generous rivalry between Stanford and Berkeley and a noble high-school system which covers every village in the State it could hardly be otherwise. California's State university is not less big than the famous ones of the Mississippi Valley. None of them can surpass its president in grandeur, nor do any of them teach the Oriental languages so well; Berkeley's Greek theater is not only the hugest thing of its kind in the world, but it is also the place where the first Sanserit play ever seen on this continent was acted by the students. Neither does the Lick Observatory depend entirely upon its size for its renown. The staff produce a dozen volumes of good astronomical literature annually and their star-gazing is highly esteemed among the learned. While many colleges on the Atlantic seaboard were yet wandering in the darkness of Biblical tradition, Professor Le Conte, at Berkeley, was preaching the pure doctrine of Darwinian evolution and gaining a hearing for it by his gracious persuasiveness. Pioneer work has been done at the University of California along other intellectual lines. Professor Hilgard of its faculty was one of the first men in the world to practise soil analysis, and long before Easterners had thought of such a thing he was holding farmers' institutes. In 1908, as the fruit of his early efforts, the University of California distributed 70,000,000 pages of printed matter and 15,000 personal letters among the farmers of the State. Sociology and natural science attract many more students than the classics, both at Berkeley and the University of Washington at Seattle. As evidence of the productive work of Pacific Coast faculties, let me say that about 57 per cent of the faculty of the University of California publish something every year, which is better than they do at Yale.

The high-school systems of California and Washington, which extend to every community, large and small, are supported in part by direct taxation, in part by the income from the irreducible school funds. The State universities have assumed a beneficent, if not entirely disinterested, supervision over them, which keeps their ideals lofty, though a trifle thin, stiffens their final examinations, and turns the young idea toward the freshman class. The trick is done exactly as it is in Wisconsin and Michigan. Oregon is a little belated in the development of high schools. A queer old theory which used to be cherished there by some leading men that education by the State ought to stop at the eighth grade has held them back.

This has not been, however, without its good effect. As a State of intensified farming interests, Oregon's specialty may be said to be real education. Oregon has come nearer than any other State to solving the problem of the rural school. Nebraska is the only State in the Union which has as few illiterates as Oregon. Washington, with less than one per cent, still has more. The youth of Oregon have been so well taught that only five in a thousand of them do not know how to read and write.

As an example of the West's interest in education let me state that Washington spends $8.02 per capita for schooling every year, while Massachusetts in all her intellectual glory spends $5.87, and New York, the land of swollen fortunes, can spare but $6.27. Washington is naturally a little complacent over this showing. The Pacific country possesses nothing quite so plentiful as ambition.

Some people like to believe that the superior political intelligence of the voters on the Pacific Coast has been developed by economic causes. A man who raises fruit and vegetables by irrigation dare not sit down and doze while his crops grow. He must keep on the alert. The success which follows might naturally lead him to try the effect of a little intelligent thought upon the problems of politics. There is much truth in this equation. There is probably more intelligence applied to politics in Oregon than in any other State in the Union. The Oregon Legislature has been bitted and tamed. For the most part it does what it is told, not by the bosses, but by those who pay its wages. If it refuses, then the people do it themselves through the initiative. If the Legislature attempts to play the dear old game of granting privileges to the corporations for cash the people put a stop to it by calling a referendum. By these two salutary devices the Legislature has been converted from a wasteful, pig-headed, and corrupt body into a lamb-like meeting of decent men who do the business they are hired for and go quietly back home. Even the difficult problem of electing a United States Senator without an orgy of bribery has been solved in Oregon. Now the election of an Oregon Senator is as commonplace as brushing your hair. The people say by the ballot whom they want chosen and the Legislature chooses him. That is the whole story. The bosses look on and weep, but nobody minds their tears. Washington elected Senator Jones under a primary law which it was predicted would break up the Republican Party. It did not, but it dried up some bubbling springs of corruption. In both Oregon and Washington the people say that if the Republican Party can not survive the strain of honest elections it is perhaps just as well to let it die.

No Thraldom of Precedent

FROM beginnings like these a civilization will develop that will be no mere repetition of Eastern achievements. It may be better or worse, but it will certainly be different. The people of the Coast have already struck out new paths for themselves in many directions. They have invented solutions for the ancient problems of civilization which are in some cases as original as the calculus was in Leibnitz's time and which may lead to results as sweeping. In a general way they are emancipated from the thralldom of precedent and are not afraid to try experiments. Ideas do not frighten them. The voters of Oregon in particular are ready at any time to sit down and ponder a new subject like proportional representation or a project for simplifying the State government. They will study the issue deliberately and vote with intellectual independence. California has not yet emancipated herself from Egyptian bondage to the Southern Pacific Railroad, though Los Angeles has applied the recall to a set of grafting city officers with a determined vigor which shows the power of that whip to keep the political rascal to his track. Tacoma and Seattle have taken long strides toward the municipal ownership of public utilities. The people of the Coast are resolutely determined either to untie or cut the Gordian knots of politics and economics. No difficulty is believed to surpass the power of human intelligence to conquer. In our modest way we believe that we are experiencing a renaissance of political life out here, and that before long the whole country will be sitting at our feet to learn how to manage things.

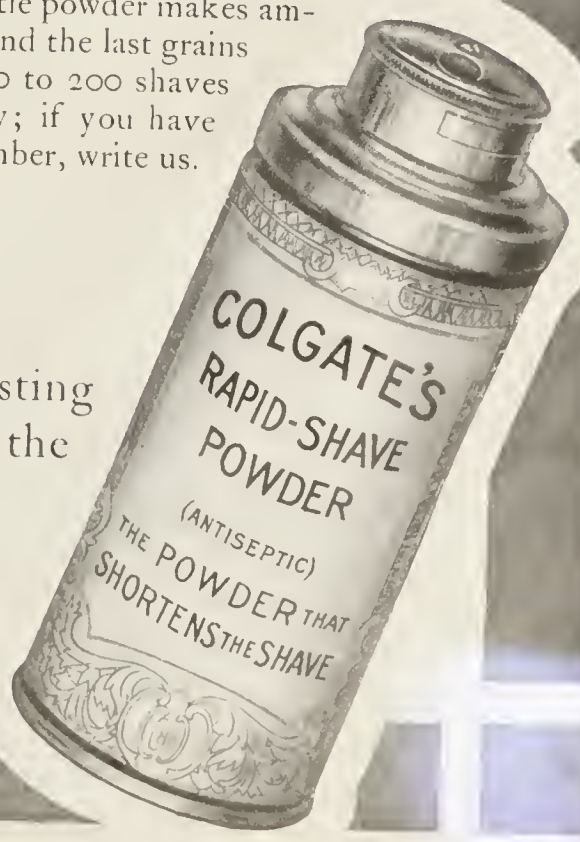
Something new

THE POWDER THAT SHORTENS THE SHAVE

COLGATE'S ANTISEPTIC RAPID-SHAVE POWDER

Soothing, Softening, Sanitary

The greatest improvement in modern shaving! Only two motions: just sprinkle the wet brush and lather your face. You cannot appreciate how well this powder is named, until you have tried it.



HYGIENIC. No soap that touches brush or skin is used again; fresh soap with every shave. No dust-collecting mug necessary. Chemists' analyses prove that it is not only aseptic, but also germicidal.

ECONOMICAL. A little powder makes ample lather; there is no waste and the last grains are as good as the first. 150 to 200 shaves in every can if used properly; if you have difficulty in securing this number, write us.

RAPID. Saves two shaving operations: 1. Wetting the beard. 2. Rubbing soap over the face, or making lather in a cup.

SIMPLIFIED SHAVING

This is the quickest and cleanest way of making a lather as lasting and delightful as that made by our famous Shaving Stick, the "Magic Wand of Shaving."

Trial Size Can Sent for 4 Cents

The Kinship of Good Clothes

ONE touch of good clothes makes the whole world kin.

To the man whose wardrobe is composed of the well-conceived, well-made Stein-Bloch clothes, one city is like another.

There is no East—no West. He is at home on Michigan Boulevard, on Broadway or in the precincts of Oxford Street, West, London.

Every suit, every overcoat, every raincoat, is made on lines and from materials drawn from the best usage in all parts of the world.

Americans, generally, know what the Stein-Bloch label stands for—clothiers and merchant tailors know it best. They know that the price is adapted to the bank account of every man who wants correct style and good fit.

It was no surprise to them that these clothes were chosen by Selfridge, the London merchant, as the representative product of well-dressed America.

Try on the Fall and Winter styles at your leading clothier's. Send for "Smartness," our booklet picturing these styles. Mailed free.

Look for this label. It means 55 years of Knowing How.

The Field Agent of Settlement

Concluded from page 19

until they turned and milled; twist and leap and sudden halt. At last the thing was done, and dust-grimed riders flung themselves from reeking horses to secure fresh mounts and begin again. Others roped the young animals and flung them prostrate for the searing of the red-hot irons, branding each according to the brand the mother bore. In the trampling chaos near the branding fires they threw their looped riatas among the stifling dust clouds; and their wiry broncos, standing legs implanted, grunted to the shock of the tautened nooses. From place to place each outfit went until its range was covered and its work was done. This was the first establishment of civil law, the fixing of a symbol of possession.

Indians and "Bad Men"

IN THE long hot summers they rode out from the ranches every day, every man traversing a wide circle whose circumference stretched many miles. Riding, they watched the range. They noted those who came and went. They kept track of every group of cattle, whither they wandered, whence they had come. They read the brands and earmarks, keen-eyed for any alteration. They kept close watch against any theft or loss. Thus they guarded the rude law which they had made.

The violators of this law of Mine and Thine were of two classes: renegade Indians and "bad men." Because both rustled cattle, the cowboys warred on both.

With the Indians the army did its best to deal. But the army was pitifully small; and it was hampered by successive maladministrations of interior affairs. Where it could not cope the cowboys did. In time at cost of many lives they tanght the different tribes that the range was not a pleasure ground for war parties. Apache, Cheyenne, Ute, Crow, and Sioux—they learned that lesson thoroughly. But the teaching was a bitter task. It left unmarked battlefields over all the West. It is a common story—the little group of men behind some shallow cover, slowly and systematically emptying their Winchesters into the ring of frenzied, naked riders, until the circle breaks and the savages melt away, or the cartridges run out and the forlorn hope becomes a massacre.

The task of eliminating "bad men" amounted to a loose, cooperative policing of wide areas. Most of these outlaws had been found wanting on the ranges and had drifted to the towns. They worked as a rule in little bands, rustling cattle, holding up stages, or robbing timid Easterners. The majority of them were rank cowards who had earned their reputations by murdering from behind; a few possessed indomitable nerve. In the open the ranchers usually succeeded in tracking down and breaking up their bands. As a rule such a cleaning out was accompanied by half a dozen hangings. In the towns it often happened that the vicious element grew strong enough to rule, even at times electing its own sheriff. Then came a period when no man's life or property was really safe. These periods usually ended after a revolver battle between a band of cowboys and the array of ruffians in the town's main street. Grim meetings of faultless marksmen, more than one of these encounters saw men on both sides fall, discharging their weapons on the ground by the pull of lifeless fingers.

Indian and "bad man" went because the cowboy decreed that the rights of property must stay. The range became quiet; the towns grew fit for women.

Finding Routes Across the Plains

TO SHIP the beef or find other pastures and new streams the cowboys drove vast herds across long distances. In the day the cattle traveled slowly and the ride was tedious among clouds of acrid dust. Fording deep rivers, men risked their lives at brink of shelving depths to keep the steers from swimming downstream, or crossed their horses where death lurked in sucking quicksands. At night they took turns watching while the herd slept. They rode slowly back and forth beneath the glowing stars singing the long, minor-noted ballads of the range. To the assurance of their voices the wide ranks remained quiet. Sometimes, however, there came a panic. A bit of shadow moved in the brush; a leaf stirred; a steer rose snorting. Instantly the herd was on its feet, stampeded, an earth-shaking thunder of hoofs, a dark, billowed sea flecked with gleaming horns. Then, while the sleeping cowboys by the wagons flew to mount and follow, their companions raced in blackness close beside the sweating bodies of the fleeing steers, or crossed before the rumbling front at breakneck speed. And when a horse missed his stride or found a dog hole the rider fell to mangled death.

In these long drives they picked the routes for easiest traveling. They followed them from year to year, improving them as time went on. Eventually these routes became roads, and subsequently railroads followed some of them.

The horses which they rode they captured wild and broke. This native stock had wandered many years over the pastures of the wilderness, a lean, hard-sinewed breed that knew no masters. The cowboys roped them, threw them to the ground, saddled them, and rode them. That was the taming process, a bone-racking struggle of an agile man to keep his seat and wear down a leaping, twisting, rebellious brute. They called it "bronco busting." When the man had mounted and had torn away the bandage from its eyes the horse buckled up and began to buck. It sprang high in the air, back arched, head down, all four feet close together; it came down with a muscle-rending jolt. It leaped again, turning as it left the ground. It reared, lolling its tongue, bellowing with rage. Sometimes one fell back on the saddle-horn. Always a lithe, unshaken incubus, the rider raked the bronco with his spurs, struck it with folded hat across the eyes, or sprang free as it fell, and then remounted. And in the end the animal, head hanging, dripping sweat, trembling with effort, gave up and obeyed the bridle.

In this manner they got from the wilderness a breed of horses whose sure-footedness and endurance make them valuable throughout the West to-day.

That was their work: long hours in the saddle riding recklessly, branding of cattle, fights with lawless men, lonely night vigils, fording of turbid rivers, taming of horses, and discovery of travel's routes. They drove their herds and made them multiply where bison herds had grazed; they brought the first rude law where Indians had roamed.

On the Skirmish Line of Civilization

THE farmers saw this new country, now secure, with towns to give them market. They took advantage of the homestead laws and followed westward. They built their barbed-wire fences and they plowed the sage-brush under with sleek, chilled plows. In a decade their grain fields were waving where the pasture lands had been. And the cowboys, seeking new feed for their cattle, were riding further to the west.

In this manner, while the other forces pressed behind, they rode, as cavalry advances, in a skirmish line that stretched from Canada to Mexico. They left the plains and climbed the rolling foot-hills to the Rockies. From the passes where the waters part they traveled onward, down the slopes which lead in time to the Pacific. In the south they crossed the shimmering deserts by the Colorado. In the north they followed the deep valleys of the Snake and the Columbia.

The farmers came on after them. As fast as the wilderness was pacified, as rude law came and little towns sprang up, they followed with their plows and seeders. They occupied the country of the pastoral. They made its soil yield those products on which other industries depend.

Then, as these products offered sustenance and material on which to work, the hosts of these more complicated industries followed in their turn. The toilers and the men who planned came to build the railroads and the mills. Their cities roared and hid the sky with smoke.

That was the movement. It took less than forty years. The last force is pouring in. The scouts have gone. The cavalry has disappeared. It is only a short time—a matter of five years or so—since the last of them vanished before a rush of colonist farmers in the north. And only recently in California the last of the large cattle companies announced the segregation of its holdings for their sale to fruit and grain growers.

There still remain a few isolated places where one can see a remnant of these riders—a bit of Arizona desert, a California hillside sloping to the sea, some grass land up in Washington. In such a spot you glimpse sombreroed herders drowsing at noontide or a solitary horseman seeking strays. But that is all. The range has gone. The cowboys have gone with it. In many other parts of the world there have grown up races of splendid riders, but none of them had the combination of intelligence and animal perfection to do what these men did in less than forty years. They made possible the mightiness of America.

I have worn one suit of Society Brand clothes and now feel that I would not care to purchase any other make.
EDW. E. CHILES, Pendelton Mo.

I now have a suit of Society Brand. They are the best I could find.
C. B. BROADSTREET, Cloverdale, Ind.

I like your clothes better than any I ever saw.
CLIFF NELSON, Ottumwa, Iowa.

Society Brand Clothes are the neatest and nobbiest clothes I have ever seen and are just what I have been looking for.
HUGH COLES, JR., Geneseo, Ill.

I am very much taken with Society Brand clothes.
F. C. CLARK, East Concord, N. H.

I like your brand of clothes. If you have a representative in Baltimore, I would like to know his name.
C. FEARS, JR., Baltimore, Md.

We have shown your merchandise to our best trade and the same has made a hit.
HEESEN & HEESEN, Tecumseh, Mich.

I have worn Society Brand clothes and am very much pleased with them.
JACK G. SIMMEN, Scranton, Pa.

I have worn Society Brand clothes and consider them the smartest clothes in America.
F. R. PAYNE, Ukiah, Cal.

I recognize in Society Brand clothes the style and good tailoring not found in any other make of clothes.
JOHN F. BURD, Manilla, Ind.

It's me for a Society Brand fall suit.
GEO. H. HENNEMAN, Keokuk, Iowa.

I have had the pleasure of wearing Society Brand clothes and believe in their superiority over all others.
E. R. CARMOEGA, Philadelphia, Pa.

Have always been very much pleased with Society Brand clothes.
ARTHUR HUNTER, Reading, Pa.

I apply to you at this time because I am very much taken up with your style of clothes.
T. E. WALLACE, Key West, Fla.

Have been very much satisfied with the style, fit and durability of Society Brand.
JACK HILTON, Grand Rapids, Mich.

It gives me pleasure to state that your clothes are all that you claim for them.
J. C. LAVIERE, Jacksonville, Fla.

The Voice of America's Young Men

ABOUT

SOCIETY BRAND CLOTHES

No wonder we are overwhelmed with voluntary testimonials from all points of the compass. We are recognizing the specific demands of the young man. We are responsible for the more extensive recognition of the young man's trade, which, after all, is the real substance of the clothing industry. We are making young-mannish clothes which give you an air of dignity, aristocracy and class. Society Brand Clothes set you apart from the common herd instantly. They are different, yet dignified; dashing, yet refined. They are made of fabrics youthful in pattern, the mills weave our special youthful designs, even our linings and the shape and design of our buttons show the much-to-be-desired spirit of youth. We have succeeded admirably in fitting the young man body and mind. And to those men who are older than young men, but who wish to appear young we earnestly recommend our clothes. Ask your dealer to show you Society Brand clothes. They are sold in almost every community in the United States.

If your clothier doesn't sell them, write to us for Fashion Panels of 1909-10. Address

MACBETH, Pittsburgh

Patriotism and Waste

(Continued from page 23)

in their richness by erosion, and by the loss of valuable elements. Erosion over extensive areas has gone on so rapidly as to have removed a considerable percentage of the soil, and in some States extensive tracts have actually been converted into bad lands. So serious have been these inroads upon fertility that W. J. Spillman of the Bureau of Plant Industry estimates that on fifty per cent of our farms the production is falling off. The elements of fertility, nitrogen and phosphorus, must be restored. Of nitrogen there are illimitable quantities in the atmosphere, and through the means of leguminous plants and bacteria the soil may be enriched in this element. Also by the use of water-power nitrogen compounds may be produced and directly used as fertilizers. Thus there is a possibility that with a sufficient expenditure of care and money, nitrogen may be permanently retained in the soil in adequate quantities.

Criminal Waste in Exports

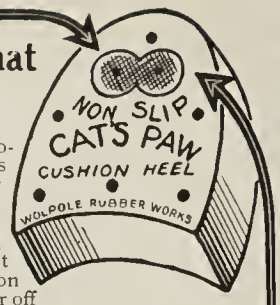
NOT so with phosphorus. This is the one fundamental element of fertility which is very sparse in the soil—not more than eleven-hundredths of one per cent—and there is no way in which to increase the amount except by the use of the natural segregation of this element. Experiments in Wisconsin show that fields which have been cropped for fifty years have lost more than one-third of their original content of phosphorus.

A simple calculation shows that if the four hundred million acres of cropped fields have lost their phosphorus to one-half this extent, there would be required, to restore the soil to its original fertility in this element, the full output of all of our phosphate mines at the present rate of exploitation for more than a century.

Notwithstanding this fact, forty per cent of our phosphates mined are being shipped abroad. By our methods of sewage disposal, we are dumping annually the equivalent of more than one million tons of high-grade phosphate rock into the sea. And Van Horn estimates that our total supply of this class of rock will not be more than sufficient to meet the demands for the next twenty-five years, provided the present rate of increase of exploitation continues.

To permit the exportation of one pound of phosphate rock is nothing short of criminal. To continue to dump into the sea through our sewage vast quantities of phosphates is far greater folly than it would be to dissolve ten times its present market value in gold in an acid and turn that solution into the sea. If our phosphates, when once used, are returned to the land they may be used over and over again, and thus ever help to produce abundant crops, and to nourish unnumbered millions of people.

A Billion Dollars Yearly Wasted



THE various forms of waste of our natural resources, in reference to which we can give definite estimates, and which are remedial, amount to at least $1,000,000,000 per annum. Yet Mr. Tawney of Minnesota, the chairman of the House Committee on Appropriations, in a speech in the House of Representatives, July 27, gives as a reason why the request of President Roosevelt for $50,000 for the use of the Conservation Commission was denied, and why he introduced the clause in the Sundry Civil bill preventing the scientific bureaus of Washington from co-operating with this commission, that the Government appropriations amount to great sums, and especially that the appropriations to the army and navy are enormous. Do not the facts in this paper justify me in repeating the statement made in the "World's Work" that "we should hold him responsible to the people for doing all possible to render ineffective the conservation movement," and that "all good citizens who know the facts should spread the truth abroad as widely as possible in order that he may receive the profound public condemnation which is his just due?"

The national forest now amounts to 100,000,000 acres, of which more than half was withdrawn from private entry during President Roosevelt's Administration—as were also the phosphate lands of the West.

Until recently the coal lands, without regard to value, have been disposed of at the ridiculously low price of from $10 to $20 an acre, the law fixing these minimum prices, depending upon location, having been interpreted as meaning maximum by the Land Department from 1873 to 1907, when President Roosevelt withdrew the public coal lands, approximately 67,000,000 acres, from entry pending classification. Recently the Secretary of the

(Concluded on Page 41)

The Heel That Doesn't Slip

The Cat's Paw Rubber Heel never slips on wet or muddy walks. The **Friction Plug** prevents it. Moreover, this plug, being placed right where the friction comes, takes the wear off the rubber. Makes these heels actually outwear **Leather** heels. Because of this Friction Plug feature and the plain superiority of the rubber that goes into their manufacture—

CAT'S PAW

Non-Slip Cushion
RUBBER HEELS

are conceded by all to be the best on the market. Wear a pair. Learn for yourself the pleasure of walking with a light, elastic and natural step. Give your body and nervous system a rest from the ceaseless pounding and jar of hard heels against hard walks. At all shoe dealers. Put on by any cobbler. Price by mail, 35 cents. Send outline of heel.

THE
Common Sense
Double Hitch **Garter**

Is the First Really Comfortable Garter

Almost any garter will support the hose and give a fairly neat and presentable appearance to the ankle. But not one of them, with the single exception of the **Common Sense Garter**, can be worn all day long without the least discomfort—without binding, chafing or leaving an unsightly irritated crease around the leg.

The **Common Sense Garter** is the only hose supporter that provides for an equal and uniform distribution of the tension on the flesh. Because of this it is the only supporter that can be worn all day, day in, day out, with perfect, absolute comfort. And—**Common Sense Garters** are the strongest and most serviceable supporters you can get.

Common Sense Garters are adjustable and will not tear the sheerest hose. They are quickly and easily attached or detached. Made in all colors.

Ask your dealer for COMMON SENSE GARTERS and don't let him give you any other. If you can't find the COMMON SENSE GARTERS conveniently we will send you a pair direct on receipt of price. Mercerized 25c, Silk 50c.

"Sampeck Clothes"

· The Standard of America ·

For Young Men

FIFTY-NINE separate processes enter into the manufacture of "Sampeck Clothes" from the time a coat leaves the designer until it reaches the last examiner. Fifty-nine separate pairs of hands contribute their share to lend grace and good form, style and symmetry, shape and permanence to each finished garment.

One tailor *moulds* the shoulders. Another *shapes* the front. A third *inserts* the sleeves. A fourth is *pocket* expert. And, thus, it goes through fifty-nine processes, each tailor attaining truly wonderful adeptness in his specialty.

Think of what this *massed* and *marshaled* skill means! Think of how the cloth grows, *step by step,* under the patient manipulations of fifty-nine pairs of hands and under the watchful guidance of fifty-nine pairs of eyes into the "Sampeck" Suit or Overcoat that your clothier proudly shows you.

No individual tailor could possibly "turn out" garments level with "Sampeck Clothes" in pre-eminence of style, perfection of drape and nicety of balance, because no *single* mind and no *single* pair of hands can match *fifty-nine* minds and *fifty-nine* pairs of hands.

"Sampeck Clothes" are created *expressly* and *wholly* for Young Men. The models are *different-as-can-be* from those suited to older men. They have ease and poise—bold and original lines—an *athletic* fullness and freedom—the "air aristocratic."

The pictures reproduced above show "Sampeck Clothes" as they *are*, not as they *ought to be*. Any clothier who serves young men can show them *to* you or get them *for* you. Ask *yours* for "Sampeck Clothes" and take no garment *without* our familiar "Sampeck" label, which is attached to the inside pocket of *every* coat.

"THE COLLEGE ALMANAC" "B" of College Sports and College Styles. *You can have it for the mere writing.*

IN ANSWERING THESE ADVERTISEMENTS PLEASE MENTION COLLIER'S

Interior has ordered a new scale of prices that are still absurdly low, and it is difficult to imagine what sufficient reason the Secretary can assign for disposing of the public coal lands for a fraction of their real value. According to a recent press bulletin of the Geological Survey, the prices fixed are rarely equal to a quarter of the royalties paid in the same districts for like coal lands among private interests.

It is perfectly clear that the interests of the nation demand that all of our mineral lands, and especially our coals and phosphates, should be perpetually withdrawn from private entry, and be operated under the Government upon a lease system. This is vital with reference to the phosphates in order to prevent their exportation. It is vital with reference to coal in order that fuel from the Government lands may compete with that from land privately held, and thus prevent monopolistic prices.

The Tide Just Beginning to Run

WITHOUT the widest and wisest system of education the poor will be led by impulse and not by reason. Without the widest and wisest system of education those who possess largely will continue to be controlled by individualism, as are the small group of men who own the anthracite coal of the country, a resource which it took millions of years of labor of sun and earth to manufacture, as if this privilege were granted from on high instead of from their fellow men.

By some men largely possessing I have been asked the question, whether the new movement of restrictive legislation is merely a temporary flood which will soon subside. To such I have said: "The tide is just beginning to run, the part of wisdom is to cooperate, to be fair to this generation and considerate of the generations to come, or you will be overwhelmed by a mighty tidal wave of mingled just indignation, passion, and prejudice."

The new movement can no more be stilled than can the tides, which depend upon the movements of the planets, because it rests upon as fundamental a cause—a severe limitation of the natural resources of the nation. The part of wisdom is to work with the movement, and not against it. It may be guided. It can not be stayed.

Those who play their part in this great revolution in ideals, the most fundamental and the most necessary that has ever confronted the nation, will receive the blessing of posterity.

✣ ✣ ✣

The Fruit-Basket

(Continued from page 17)

est and attractive package is the best agent in any trade. It was this truth that inspired the fruit-growers of Wenatchee, Missoula, the towns of the Yakima Valley, Hood River, and others to organize their fruit-growers into unions. The apples no longer went forth under the meaningless names of Ben Brown or John Jones, but with the guarantee of a great and wealthy valley. No grower was allowed to pack his own apples. The associations did it, and did it with conscientious care. "Find a bad apple and we'll give you the car" was their confident assertion. Eastern traders discovered that there was a valley standard. It was no longer necessary to send buyers West. They could order the standard products by wire. Ben Brown and John Jones discovered that the surest way to sell their fruits at the highest prices was to standardize and get the valley stamp on their box. But the union idea did not stop here. The associations set out to educate their members along the line of their occupation. The unions make liberal use of the telegraph wires, and so make a more intelligent distribution of wares than an individual could do. They set out to discover new markets. They married the orchardist to the horticultural schools of the State agricultural colleges and made of a trade a scientific profession. They taught caution and conservation. They showed that, though apple trees may live a hundred and fifty years, and though their valley lands were richer than the Asiatic province of Shansi that has been farmed for forty centuries, the original orchards of the Luellings had gone into decay through carelessness and neglect even in the virgin richness of the bank of the Willamette. But the fruit-growers' unions are doing most as a school of applied ethics. They erase jealousies and suspicion, and establish a trust and appreciation of neighbors and a spirit of fraternalism and patriotism.

"Do you want to go back to Germany?" asked a visitor who was inspecting a twelve-year orchard that had been planted and matured by a native of Cassel. Waving his hand in a broad sweep that took

in his trees, a noble view of Mt. Adams, a group of a half-dozen neighbors, and a small Liberty pole from which floated the Stars and Stripes in the brightest sunshine of July, he replied: "Could I get these in Germany?"

A British soldier recently wrote a play called "An Englishman's Home" that threw England into consternation. It pictured a peaceful English household suddenly attacked and wrecked by the soldiers of an invading army. The whole country went military mad. Schoolboys formed battalions and drilled daily on the green. Even girls went through the manual of arms. Years ago the brilliant English statesman, Disraeli, said: "Opportunity is more powerful than conquerors or prophets." The fruit men of the West, with no thought of shell or gun, in a country blessed with a vast peace, attend to their vines and their trees as did John Burns to his cows and bees.

It has taken more than a hundred years to make the choice acres we find at the Lexington or the Concord greens. But there is no part of their story that is not as much the rightful heritage of the Yakima Valley boy as the youth whose library window looks out on the yard of the Harrington house, where fell the first sacrifice for American freedom. To the Lexington lad will come with his legends of the West the story of how Marcus Whitman, with his "iron-tire" wagon, saved an empire to our flag, and how the Luellings, by carting with ox-team a bundle of twigs over thousands of miles of hardships, changed a vast wilderness into great States and proud cities and prosperous farms with millions of brave, happy people, and with opportunity awaiting many millions more.

The Passing Red Man

Mr. Curtis's Photographs of the American Indian

LEADING librarians of England and America seem to agree that one of the most important single publishing enterprises in recent years is the "Photographic History of the North American Indian," by Mr. Edward S. Curtis of Seattle. For years Mr. Curtis has been working in anthropological photography. Appreciating the historical value of this work and the urgent need of having it carried to as complete a condition as possible, Mr. J. Pierpont Morgan of New York contributed toward its publication: the edition will be limited to five hundred sets of twenty volumes, to sell at $3.000 a set. Mr. Morgan himself subscribed for the first hundred sets, which he distributed among English and American colleges and libraries. Through the courtesy of Mr. Curtis, COLLIER'S is enabled in this number to offer to its readers some examples of Mr. Curtis's work. In commenting upon Mr. Curtis's photographic achievements, ex-President Roosevelt once said:

". . . Our generation offers the last chance for doing what Mr. Curtis has done. The Indian as he has hitherto been is on the point of passing away. His life has been lived under conditions through which our own race passed so many years ago that not a vestige of their memory remains. It would be a veritable calamity if a vivid and truthful record of these conditions were not kept. No man alone can preserve such a record in complete form. Others have worked in the past, and are working in the present, to preserve parts of the record; but Mr. Curtis, because of the singular combination of qualities with which he has been blessed, and because of his extraordinary success in making and using his opportunities, has been able to do what no other man ever has done; what, as far as we can see, no other man could do. He is an artist who works out of doors and not in the closet. He is a close observer whose qualities of mind and body fit him to make his observations out in the field, surrounded by the wild life he commemorates. He has lived on intimate terms with many different tribes of the mountains and the plains. He knows them as they hunt, as they travel, as they go about their various avocations on the march and in the camp. He knows their medicine men and sorcerers, their chiefs and warriors, their young men and maidens. He has not only seen their vigorous outward existence, but has caught glimpses, such as few white men ever catch, into that strange spiritual and mental life of theirs; from whose innermost recesses all white men are forever barred. Mr. Curtis is rendering a real and great service; a service not only to our own people, but to the world of scholarship everywhere."

Do Your Feet Ache and Burn

And make you tired all over? Allen's Foot-Ease makes the shoes comfortable, rests and cools the feet and makes walking easy. All druggists, 25c. Don't accept any substitute.—*Adv.*

Gillette Safety Razor

NO matter how skillful a man may be with an ordinary razor he will occasionally nick his face—and there is always the danger of a *bad cut.*

The Gillette is safe. On some mornings a man is nervous or in a hurry and there are times when "his fingers are all thumbs"—then there's special comfort in the G[illette]. It requires no stropping or honing. He can shave quickly—clean up all the corners without a cut or scratch.

The time to buy a Gillette is now.

It pays for itself in three months and it lasts a lifetime.

The Gillette, illustrated herewith, is so compact that it can be carried in the pocket or slipped in the side of a traveling bag. It comes in gold, silver or gun metal—with handle and blade box to match. *The blades are fine.*

Prices, $5.00 to $7.50. For sale everywhere.

You should know Gillette Shaving Brush—bristles gripped in hard rubber: and Gillette Shaving Stick—a soap worthy of the Gillette Safety Razor.
